

Emergi-Lite® Inverters

Your complete guide to power
your existing lights as emergency lights

- Benefits of using existing lights
- Benefits of using existing wiring
- Eliminate manual maintenance for testing and audit trails
- Comply with life safety codes

Emergi-Lite®

Providing optimal light in an emergency
with our backup power systems

Benefits of using existing lights as your emergency lights

We all know the feeling of walking in a large building and having no idea where to go. Roaming through hallways, taking wrong turns or trying to find your way out of a building can be difficult, especially in the event of an emergency.

Emergency lighting and exit signs are essential for commercial buildings, where individuals need to evacuate quickly and safely.

Now imagine if your normal electrical supply is interrupted by an emergency, but instead of just emergency and pictogram signs, your existing lights worked in conjunction with your emergency lights to illuminate and direct occupants to the nearest exit. Using your existing lights as emergency lights could provide dual support, allowing individuals in the building to see clearly, avoid obstacles and confidently find to the nearest exit during a power failure.

Use your existing lights
as an emergency lighting solution

Keep building aesthetics in place

Maintain the look of existing lights without adding separate emergency lighting units. Ideal for rooms with specific architectural designs, reception areas and lobbies, as well as in commercial and retail spaces.

Comply with life safety codes

As emergency lighting is directly linked to life safety, codes and regulations demand strict compliance in the design, installation and maintenance of a fixture and other emergency lighting equipment.

Reduce initial and ongoing costs

By eliminating the need for separate emergency lighting units, initial installation costs are significantly reduced. Using inverters instead of self-powered emergency lights simplifies maintenance and testing.

Mini-Inverters

For multiple luminaires requiring up to 1440W
at a distance of up to 1000 feet

**The most versatile, flexible
emergency power option**

- Delivers 100% power/lumen output of the fixture
- Ideal for locations with limited space to house power systems

Operation	Normally-on, normally off or switched loads	Normally-on, normally off or switched loads
Electronics	Pure Sine wave Inverter	Pure sine wave Inverter

Mini Inverter 300W, 600W, 1000W and 1440W

Power multiple lighting units,
single output circuit

Mini inverters offer single-point maintenance, Advanced Diagnostics and Nexus® compatibility.

Heavy-duty steel cabinet;
scratch and corrosion resistant
white semi-gloss powder-coat paint finish

Allows remote mounting up to 1,000 feet from emergency lighting fixtures; ideal for powering an entire floor in a building

Provides pure sine wave output to meet the specific requirements for emergency lighting

Operates incandescent, LED, fluorescent and ballast combinations, including 0-10V dimmers

Supplies 100% lumen output with less than 1 second transfer time

Runs switched, normally-on, or normally-off fixtures

Minimizes maintenance with standard self-diagnostics, and optional Nexus® compatibility

Meets or exceeds all Canadian Electrical Code and National Building code Emergency Lighting Requirements; cUL924 Listed

1-year warranty and 9-year pro-rata battery warranty

Mini Inverters

1000W/60 Min. and **NEW** 1440W/60 Min. with 4-output circuit for mixed loads of multiple lighting units

High-capacity Mini Inverter includes a 4-output circuit to offer an extremely versatile solution for many applications.

Heavy-duty 14-gauge steel cabinet
in white semi-gloss powder-coat paint finish

Optional 4-output circuit, each with a fuse breaker and 0-10V dimming control capability to easily connect multiple circuits of mixed loads

Runs switched, normally-on, and normally-off fixtures

Operates incandescent, LED, fluorescent and ballast combinations, including 0-10V dimmers

Allows remote mounting up to 1,000 feet from emergency lighting fixtures; ideal for powering an entire floor in a building

Small footprint; accommodates wall mounting

Provides pure sine wave output to meet the specific requirements for emergency lighting

Supplies 100% lumen output with less than 1 second transfer time

Minimizes maintenance with standard auto-diagnostics, and optional Nexus® compatibility

Meets or exceeds all Canadian Electrical Code and National Building Code Emergency Lighting Requirements; cUL924 Listed

1-year warranty and 9-year pro-rata battery warranty

Nexus®Pro

Intelligent emergency lighting management system

Mini Inverters
300W, 600W, 1000W, 1000W/60Min.,
1440W and **NEW 1440W/60 Min.**

Nexus®Pro is designed to enable building owners and managers to easily maintain and test emergency lighting, without the need to visually verify performance or disrupt the power supply.

With digital solutions, building owners now can have peace of mind knowing their buildings are safer than ever. All operations can be managed remotely, giving building owners and managers complete control wherever they are, whenever they need it most while preventing any human error in the process.

Global connectivity platform

Emergency lighting units

ABB Gateway

The Nexus®Pro intelligent emergency lighting management system uses IoT connectivity to optimize safety using an app and web interface

The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by ABB Inc. is under license. Other trademarks and trade names are those of their respective owners.

Set up
Easily install and add new devices through your smart device

Maintain
Defective devices are automatically detected and reported on your interface in addition to push notifications

Test
Run test instantly or program them to ensure that all your devices are working properly

Share
Easily share the results of tests with team members, maintenance staff and technicians

Cost effective

- Reduce labor costs for maintaining emergency lighting
- Saving on cost and labour on manual collection and recording of emergency lighting data
- 200 emergency lighting units on one gateway
- Reduce Monitoring costs by simply receiving notification once there is defective device

User friendly

- Monitor remotely anywhere at anytime
- Fast and easy testing with a smart device
- Interactive 2D floor plan layout showcasing emergency lighting positioning
- Software updates automatically applied
- Easily go from one building to many with our scalable system

Enhanced Safety and Protection

- Comply with Building and Life Safety Codes and other North American regulations
- Real-time self-monitoring and maintenance alerts if units stop functioning
- Holds all emergency lighting testing and maintenance data in a secure ABB cloud
- Ownership of maintenance data input, quick testing and device monthly and annual scheduling

Improve installation efficiency

- Quick and flexible commissioning
- Ease of use due to app configuration
- Get diagnostics and part number recommendations during failures

Nexus[®]Pro brochure

Nexus® real-time automated monitoring

Eliminate manual maintenance
for testing and audit trails

**Connect Mini Inverters to Nexus®
for a system that monitors itself.**

Manages the status of an entire emergency lighting system from a central control unit

Reduces testing/service time for minimal maintenance costs

Ensures code compliance with automated testing and record-keeping

Provides extremely high levels of system reliability and performance

Accommodates single buildings or a group of properties with wireless technology and local database.

Protects network integrity with robust software, enhanced cyber security, a strong signal, and superior penetration through building materials; ideal for industrial applications

Emergi-Lite®

Your partner in success

Satisfaction at every step of the process

Our North American team works with you to make sure you have the most efficient solution that meets your specifications. Emergi-Lite® products are designed for durability, reliability, and ease of use.

With Emergi-Lite®, our solution is:

- Easy to install and maintain
- Compliant with codes, regulations and standards – certifications available
- High quality and reliable for maximum safety

Expect fast shipping, prompt service, and ongoing support

Not only can we provide extremely short lead times, we also offer product customization at our North American manufacturing center. Our engineering team and product designers work together to create innovative new products and unique solutions that continuously help you become more efficient.

With Emergi-Lite® you have peace of mind that your life safety equipment will perform when you need it.
