Product Update

800xA Smart Client 2.2 for System 800xA Version 5.1 and 5.0 is now released

Executive Summary

The 800xA Smart Client 2.2 for 800xA 5.1 and 5.0 SP2 is now released for sale. Smart client is a key enabler for better collaboration between the offices, people on the move and plant control rooms.

800xA Smart Client is a desktop client for presenting information from 800xA in the office environment. It enables production managers, purchasing officers, planners, economists, engineers and environmental officer’s quick and easy access to KPI and real-time process information into their office PC.

800xA Smart Client 2.2 introduces the possibility to view 800xA process graphics with real-time data in a read-only mode without any additional engineering work. With the context menu comes navigation and also the possibility to view 800xA trends.

New for this release all the desktop tools are now included as a single desktop license. This means that the Excel interface and the Alarm Analysis tool are included without any extra license cost.

Products Concerned

800xA Smart Client 2.0 is the previous version.

800xA Smart Client 2.2 can be used with:

- 800xA 5.1 RevA (800xA graphics support in Smart Client)
- 800xA 5.1 FP1 (800xA graphics support in Smart Client)
- 800xA 5.0 SP2 RevE (Smart Client graphics only)
- 800xA 5.1 (Smart Client graphics only)

Description

800xA Smart Client 2.2 makes it easy to draw up key figures and performance indicators, both of which encourage a greater involvement and understanding of common goals and improvements throughout the entire organization.

800xA Smart Client 2.2 scales from 1 desktop client up to 100 clients and can access data from one up to six 800xA systems. The media includes the software required to setup a Smart Client Server and the connectors (data provider) to enable Smart client desktops to access the 800xA production data.
The Smart Client Excel Interface makes it possible to interact directly with System 800xA and connect to the Microsoft's Office environment, which means that you can drag and drop data from System 800xA to Microsoft Excel. These features lets you create personally customized reports with real-time data. Excel functions such as calculations and creating diagrams are available for processing or analyzing process data. Both real-time and historical data can be fixed or continuously updated.

The Alarm and Events desktop application helps analyze the sequence of events after a alarm trip. The tool can find and assist in eliminating unnecessary operator interactions and also analyze the frequency of occurrence for all events, search for events based on Source, Message, Severity and Priority Level and more.

The 800xA Smart Client Server runs on Windows 2008 Server (32 bit) and the desktop clients can run on Windows 7 (32 or 64-bit) and Windows XP.

Product support and updates are available exclusively to customers who have a valid Automation Sentinel subscription. This includes both the Introductory 12 month subscription which comes with all new system software purchases as well as Automation Sentinel annual renewals.

Customers can download the latest Software and Release Notes through their Solutions Bank account which is part of the Automation Sentinel subscription.
