NOTES:
1. WARNING: This drawing does not illustrate completely the installation methods required for hazardous locations. Prior to any installation in a Classifed Hazardous Location, verify installation methods by the Control Drawing referenced on the product’s name tag and national and local codes.
2. To access the Main & Auxiliary NGC termination boards, remove the Rear End Caps of the units (a 1/16th Hex Set Screw must be loosened to remove each of the Caps).
3. Wire size is a function of the distance between the NGC and the DC Power Supply. With the condition of a single heater used on both NGCs, use 8 Amps as the maximum current draw to calculate an adequate wire size so that the voltage measured at the NGC’s Power I/O terminal is a minimum of 10.5 Volts. With the optional Feed-Through Heater added to both NGCs, use 16.4 Amps as the maximum current draw to calculate an adequate wire size so that the voltage measured at the NGC’s Power I/O terminal is a minimum of 10.5 Volts.
   Additional power drawn by other equipment connected to the NGC must also be factored into this calculation. Refer to their technical specifications for the requirements of each.
