INSUM[®] MPU Catalogue

General description

The INSUM[®] MPU (Multi Purpose Unit) includes the Auto-Restart-Relay function to automatically restart motors after a voltage interruption of the mains power supply which is sometimes necessary due to different process reasons.

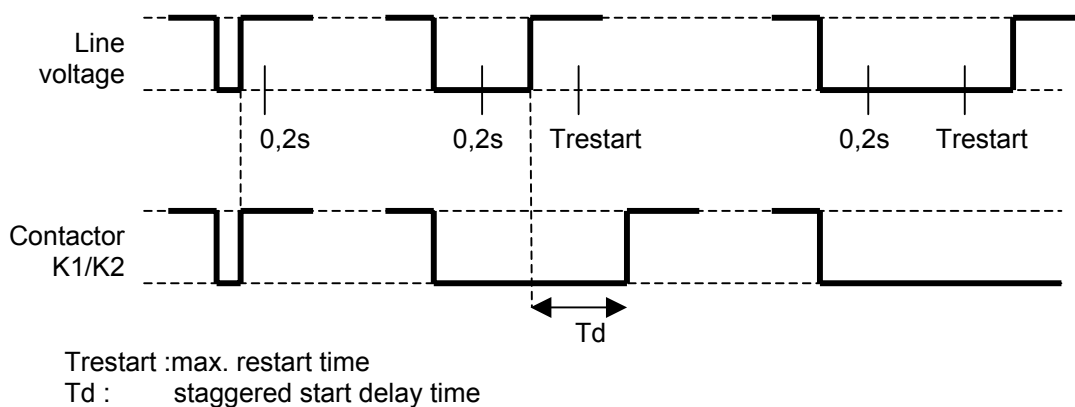

The MPU is part of the INSUM[®] system and can be used together with INSUM[®] Motor Control Unit (MCU) or as Stand-Alone-Device.

The MPU is measuring the duration of the voltage dip and reacts depending on this measured time, i.e. perform an immediate automatic restart, a delayed restart or no automatic restart if the time was too long.

There are two different modes of restart-function available :

1. ERM - Mode

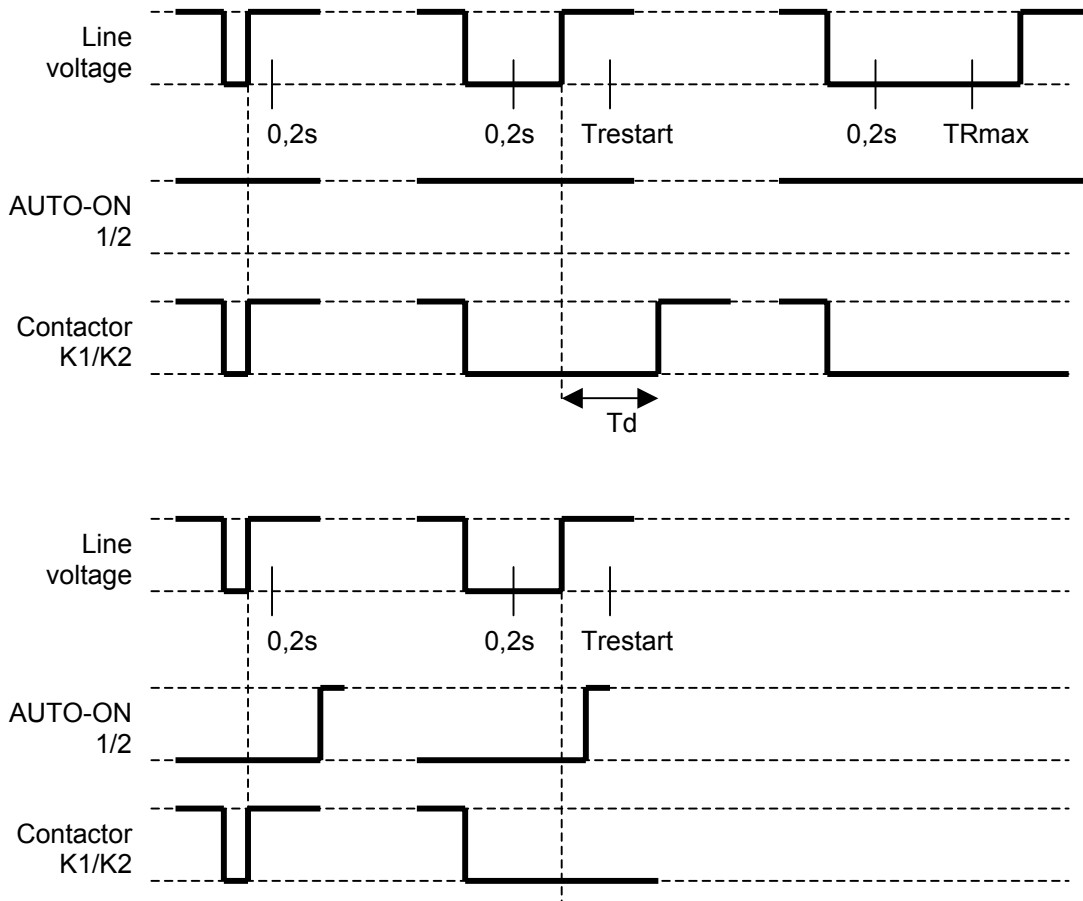

The MPU is performing the automatic restart of a motor after a voltage dip depending on the duration.

INSUM[®] MPU Catalogue

2. TDRM - Mode

The MPU is performing the automatic restart of a motor after a voltage dip depending on the duration, but only if the input "Auto-ON" is activated.

Both functions ERM / TDRM are independent from each other. The function can be selected by a selector switch.

The MPU device is supporting two motor starter types :

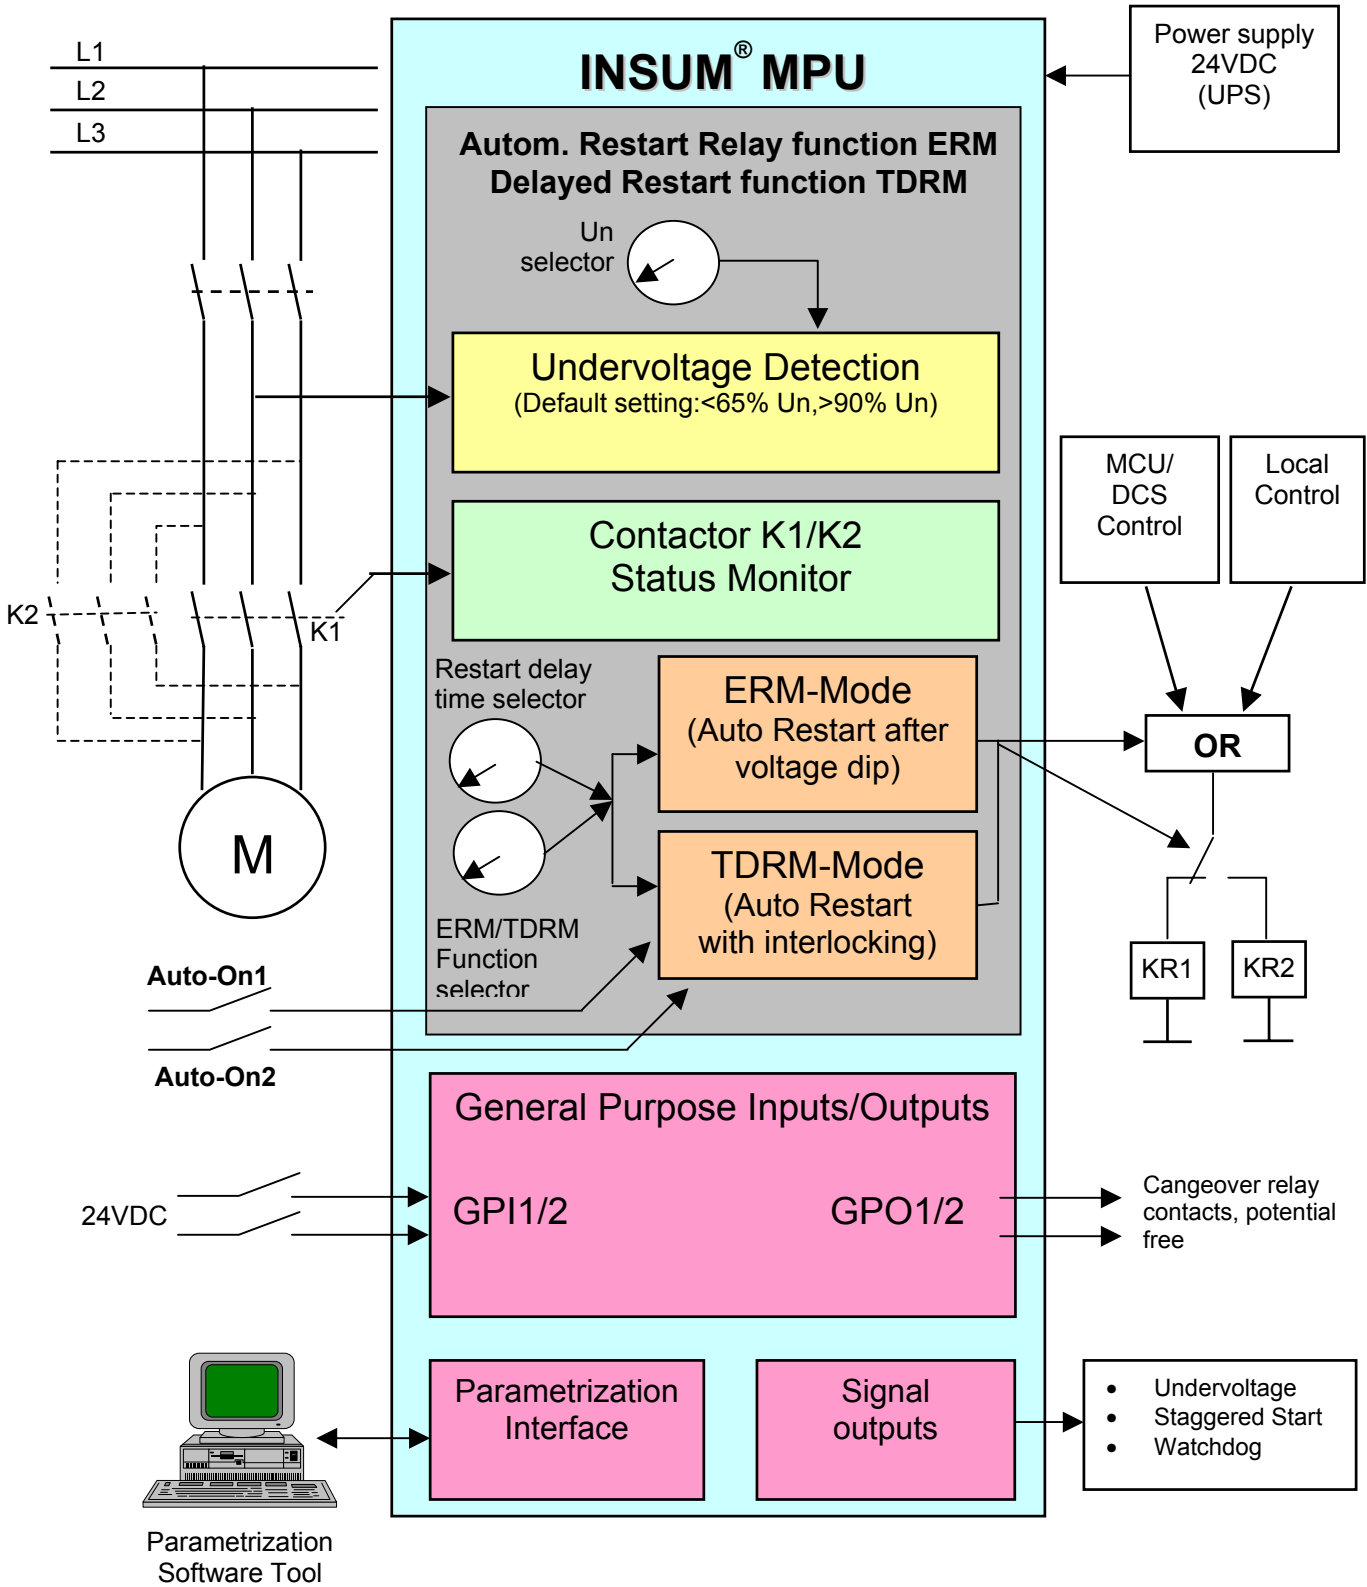

- NR-DOL/RCU (Non Reversing Direct Online Starter, RCU)
- Rev-DOL/RCU (Reversing Direct Online Starter, RCU)

The MPU automatically detects the activated contactor and starts the motor in that rotation direction the motor was spinning before the voltage dip occurred.

Additionally the MPU device has two General Purpose Inputs (GPI1/2) and two dedicated potential free relay outputs (GPO1/2).

INSUM[®] MPU Catalogue

Functional schematic

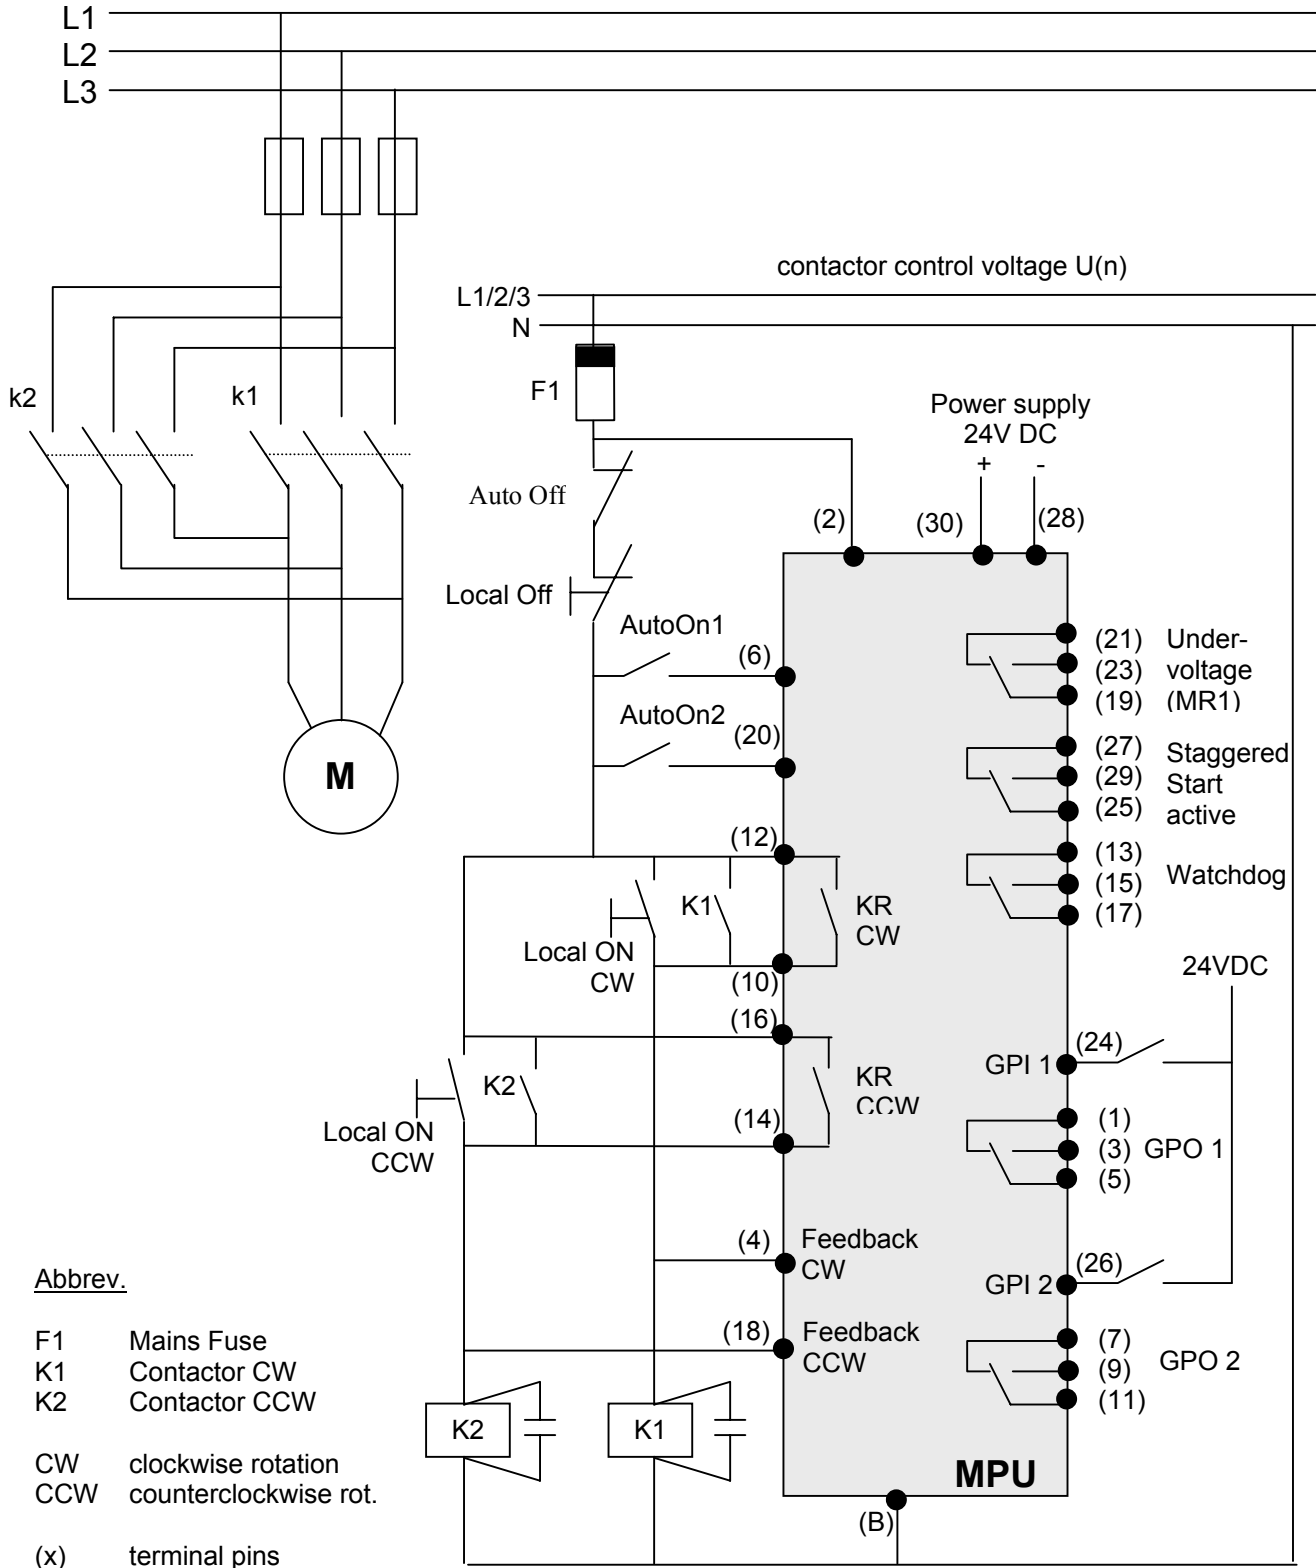

Features

- Microprocessor based Automatic Restart Relay
- Automatic restart function ERM-mode
- Automatic restart function TDRM-mode with interlocking (Auto-ON)
- Supports DOL/RCU and REV-DOL/RCU starter types
- Min. voltage dip detection time of 8ms
- Phase voltage measuring ratio (Phase-N) adjustable from 110V – 277V AC/DC
- Undervoltage detection-level adjustable by software tool (default = 65% x Un)
- Voltage restoration level adjustable by software tool (default = 90% x Un)
- Max. voltage dip time for automatic restart adjustable from 1-120s
- Staggered start delay time adjustable from 1-1200s
- “Double-Dip”-function (2 voltage dips within 1s) supported
- Easy parametrization by selector switches or programming interface (PC)
- Two additional electrical isolated General Purpose Inputs (GPI) 24VDC and 2 dedicated General Purpose Output relays (GPO)

Technical Details and Dimensions

General electrical data

Auxiliary supply voltage	
Rated operational voltage (Ue)	24VDC
Voltage operation range / current	+20 ... +36VDC
Current consumption MPU	80mA (typ.) / 24VDC

Max. ratings for contactor control relay KR CW / KR CCW and Watchdog / GPO1 / GPO2 relais (change over contacts)	
Max. switching voltage	380V AC
Max. switching current	8A AC
Max. continuous current	2A (DC-13) or 2A (AC-15)
Max. switching capacity	2000 VA

Feedback signals CW,CCW	
Number of analog input	2
Max. input voltage	300V

General Purpose Input signals GPI1/2	
Rated input voltage	24V DC
Input current, max.	10 mA

Digital relay output "Undervoltage", "Staggered Start" (change over contacts)	
Number of digital output	2
Rated operational current	0,5A
Rated operational voltage	24VDC / 230VAC

Voltage measurement		
Phase-N	(= Phase-Phase)	Un selector switch pos.
110V AC/DC	(=190V AC)	1
220V AC/DC	(=380V AC)	2
230V AC/DC	(=400V AC)	3
240V AC/DC	(=415V AC)	4
255V AC/DC	(=440V AC)	5
277V AC/DC	(=480V AC)	6

Environmental and mechanical data

Mounting	on DIN rail (EN 50022-35) or with 4 screws M3
Dimensions (W x H x D)	110 x 105 x 65 mm (W x H x D)
Net weight	400g
Degree of protection	IP20
Storage temperature range	-25 ... +85 °C
Operating temperature range	-5 ... +55 °C
Approvals	CE
