The EcoFlex eHouse portfolio covers a wide range of designs applicable to various industry segments. Its robust design and construction makes the EcoFlex eHouse easy to transport and install, and ideal for temporary power applications. It consists of medium voltage (MV) switchgear, transformers and low voltage (LV) circuit breakers.

**Features**
- Reduced risk via standardized design and production
- Robust construction for ease of transport and installation
- Fully assembled and routine tested in the factory
- Compact design and easily transported
- Minimum site works, requires only cable connections
- Reliable – proven components from a single source
- All doors lockable to prevent unauthorized entry
- Available with air or gas-insulated MV switchgear
- Forced air cooling

**Transformer**
EcoFlex can be supplied with either oil immersed or dry type transformers. The transformer can be provided with alarm and trip contacts for temperature and gas pressure.

**Medium voltage**
The EcoFlex product line can generally be provided with different options of MV switchgear from ABB’s $\text{SF}_6$ or air-insulated switchgear portfolio, and fitted with ABB’s line of relays for protection, remote monitoring and control. The MV switchgear can be provided with $\text{SF}_6$ gas alarm, switch position contacts, plug-in MV surge arresters or auto reclosing functions. MV switchgear can be equipped with smart grid options to allow operation and monitoring via SCADA. For the temporary power EcoFlex, the switchgear will be 1 x ABB SafePlus with VVV (V = Circuit Breaker) configuration.

**Low voltage**
There are various numbers and ratings of outgoing feeders (ACB or MCCB) based on transformer rating and customer needs. EcoFlex can be equipped with devices to allow remote control and monitoring.

**Housing**
EcoFlex, in accordance with ISO/1161, is provided with corner fittings for lifting and transport. Enclosure standard dimensions are according to ISO 1496-1. It is constructed with steel frames, full vertical corrugated steel side and end walls, steel flooring, die-stamped corrugated steel roof and corrugated double hinged doors. All the steelwork is constructed by semi-automatic and automatic MIG arc welding. All exterior welding seams, including those on the base structure, are continuous to give perfect water-tightness.
### Pre-engineered solution technical data

Predesigned solutions are available for optimization and quicker delivery. The solutions are equipped with MV switchgear SafePlus VVV configuration (other configurations are available upon request). The transformer includes standard integrated protection for pressure and gas. Product datasheets are available with an overview of other options available. Pre-designed solutions are shown below:

*RIS is an integrated transformer protection unit consisting of pressure, gas and 2 levels of temperature switches.

### General technical data

- Maximum voltage rating, kV: Up to 40.5 kV
- Ambient temperature range, °C: -25 to +40 °C
- Relative humidity, non-condensing: 95%
- Max altitude above sea level without derating: 1000m
- Corrosion class (ISO 12944): C5M
- IP rating, MV compartment/transformer: IP54/IP43
