

# Hi-Tech Valiant™ full-range current-limiting fuse for fire mitigation

Because there's so much worth protecting.

ABB's Hi-Tech engineers developed the Hi-Tech Valiant current-limiting fuse for fire mitigation. This new fuse incorporates over 20 years of field-tested Hi-Tech full-range fuse technology combined with a new visual indicating mechanism. The Hi-Tech Valiant current-limiting fuse's special construction contains the explosive fragments that could otherwise be emitted during fuse operation — fragments that could fall on dry vegetation and ignite a wildfire.

Centrally located low-current coils aid in heat distribution

Gray UV-resistant epoxy paint for durability and aesthetics

Tin-plated adapters and caps for increased corrosion resistance

Latch actuating pin remains external to the fuse after operation — eliminating the possibility of reclosure

Unique, patent-pending engagement pin for easy vertical and rotational alignment during installation
