COURSE DESCRIPTION

G732 ACS5000 Water Cooled Operation & Maintenance
Classroom training in Turgi, Switzerland

Course goal
The goal of this course is to train the participants in the safe operation, control, configuration, troubleshooting and maintenance of the water cooled ACS5000.

Main learning objectives
Upon completion of this course, the students will be able to locate the hardware components, to verify and replace drive’s parts and to perform preventive maintenance. The use of the available programming and troubleshooting tools is trained by practical operating exercises.

Participant profile
Electricians, technicians and engineers who operate, maintain or troubleshoot the ACS5000 water cooled drive

Prerequisites
- Basic knowledge of AC motors and drives
- Basic knowledge using computers with Windows

Topics
Generalities
- ABB medium voltage drives family overview
- ACS5000 5-level inverter topology and DTC control

Hardware description
(power electronics & control)
- Component and PCB functions
- Hardware schematics and electrical drawings
- PCB settings and configuration

Water cooling system
- Cooling circuit description
- Preventive maintenance

Operation
- Energize / de-energize, start-stop sequence
- Local operation with drive control panel and DriveWindow tool

Software introduction
- Software structure, parameters description
- Application configuration, parameter

Fault tracing and troubleshooting
- Alarm and fault indications
- Checking and replacing PCB’s and components
- Using DriveWindow SW tool for configuration and troubleshooting
- Getting help from ABB
**Course type**
This is a face to face class room training with maximum 8 participants.

**Learning methods**
- Lectures and demonstrations
- Practical exercises with training equipment
- Factory visit

**Duration**
4 days

**To register:**
Please apply online (signup required): ABB MyLearning/G732
Custom-tailored training courses or standard training at additional course dates are available on request.
Please note: The course is only carried out if at least 4 participants have been booked.

**Course outline**

COURSE DESCRIPTION **ADD-ON FOR G732**

**G732b ACS5000W Operation & Maintenance**

**G732vc ACS5000W Operation & Care**

**Web-based alternatives**

**Preface**
Due to travel restrictions in connection with COVID-19, the access to normal classroom trainings is limited. Therefore, we offer variants with contents delivered over web.

**Main learning objectives and topics**
The objectives and topics are the same as for the regular classroom course (see course description G732 – ACS5000 Water Cooled Operation & Maintenance), except some hands-on exercises in the Virtual Classroom variant.

**Participant profile**
Same as for regular course

**Prerequisites**
Same as for regular course

**Option 1: Blended Learning**
The training is split in 2 parts: Web-based training followed by the classroom hands-on session

**Virtual Classroom part**
- Content distributed over 3 days (experience has shown, that more than half a day virtual training at once is tiring and therefore not effective)
- In the mornings: Approx. 3h instructor-led virtual classroom training (e.g. via Skype)
- Interactive training with state-of-the-art online tools in small classes of 5 – 8 participants.
- In the afternoons: Approx. 1h self-learning tasks and self-assessments, trainer available for support

**Hands-on part**
- 2 full days of classroom training with training equipment (instead of 3 days)
- Focus on practical exercises, putting theory into practice

**Advantages of Blended Learning**
- Virtual classroom part is location independent; no travelling required → COVID-19 does not stop us from learning
- Participants have a common level of knowledge, when coming to the hands-on part → Time for practical exercises on the training equipment is maximized
- Combination of different learning methods is more effective
- Recalling information, which was learned earlier, strengthens the knowledge

**Disadvantages of Blended Learning**
- Virtual Classroom training is mainly limited to theoretical topics → This makes it more tiring
- No real hardware at hand during Virtual Classroom sessions → Makes it more difficult to visualize the knowledge
- The whole training is less compact, due to split over 2 weeks

**Duration**
- 3 days Virtual Classroom training
- 2 days hands-on training in our Learning Center
Option 2: Virtual Classroom only

Methods
— In the mornings: Approx. 3h instructor-led Virtual Classroom training, e.g. via MS Teams. Experience has shown, that more than half a day virtual training at once is tiring and therefore not effective.
— Interactive training with state-of-the-art online tools in small classes of 5 – 10 participants.
— In the afternoons: Self-learning tasks on training equipment accessed over web, self-study and self-assessments; trainer available for support

Limitations
The following topics cannot be covered to the same degree as in the regular classroom training:
— Operation of demo unit
— Semiconductor check and replacement
— Fault finding exercises on demo unit
Those topics are taught as good as possible using videos, demonstrations, case studies, etc.

Duration
4 days Virtual Classroom training

To register
Please apply online (log in to MyLearning first): ABB MyLearning/G732

Recommended follow-up: Hands-on training
— Hands-on training in our training center can be booked separately at a later date.
— Up to 2 full days of classroom training with training equipment
— Focus on practical exercises, putting theory into practice
— Combinations with other trainings, Factory Acceptance Test, etc. possible
