Control Panels

Control panels: Reliability and high communication features for an ergonomic and comfortable installation

ABB Entrelec offers a wide range of control panels, from the smallest and simplest one for text applications (CP501) to the touch screen combining graphics, text and functions (CP555).

These control panels from our CP500 program offers high level of HMI interface functions for any kind of automation systems granting transparency and reliability.

All CP500 panels can communicate with our AC31 PLC's, and with all major PLC brands in the market place.

Our CP500 panels offer a wide range of communication protocols like Profibus DP, Modbus or Ethernet. Supplementary communication features are also available for bar codes, printers, modem as well as WEB functions and receiving and sending e-mails.

Additionally, TFT technology offers large display visibility from different angles.
