Endless connectivity wherever you are.

ABB Industrial
Software-as-a-Service
Our industry is changing. Fast.

As the energy industry focuses on asset performance management to improve productivity and competitiveness, digitalization will be the key to your future success.

Volatile economic and working conditions continue to place pressure on budgets and staffing, increasing the need for remote access, automation and efficient risk management. And with a greater desire to generate more value from existing assets, coupled with the acceleration of sustainability and digital transformation initiatives, seamless information sharing and application integration are essential.

Revolutionize your way of working
ABB’s Software-as-a-Service for Energy Industries is a game-changing business model that enables you to harness the power of digitalization to take your Asset Performance Management (APM) to the next level.

APM is core to any industrial enterprise because it addresses costly and common issues, such as lacking visibility into asset degradation in order to prevent failures or maximize production potential.

For Energy-related customers, our Industrial SaaS is an APM portfolio of software and expertise that gives you tighter control over your industrial assets.

You can better optimize the risk, costs and rewards of operating an industrial enterprise through these solutions. Whether pumps or turbines, your assets can be utilized to their full potential while strategically improving your plant with digital capabilities.

Your data. Anywhere. Any time.
In five short years, predictive maintenance has moved from an uncertain, standalone niche use case to a fast-growing, high ROI application that is truly delivering value to users.

Due to advances in AI and the increase in data points, sophisticated analytics are becoming more and more important.

ABB Industrial SaaS not only delivers these immediate measurable benefits, but also provides modernization and strategic benefits.

Our on-demand digital subscription service gives you the power to unlock the true value of your digital initiatives.

So no matter where you are in your digitalization readiness, we can help you, whether it’s accessing data from across your sites to visualizing it to collaborate, or to analyze it to uncover insights that help your business.

Optimize efficiency
Control assets across your entire operation with real-time dataflow.

Stay ahead of demand
Manage conditions with operational analysis from anywhere.

Eliminate downtime
What you need, when you need it with seamless, on-demand digital delivery.

Mitigate risk
Do more with less and flexibly customize or cancel your subscription at any time.
**Why ABB?**

With deep domain knowledge, we have the experience and expertise in delivering world-class automation products, systems and solutions for the energy industry.

Our wide area of complimentary digital and collaborative solutions across applications and sectors help you to remain competitive and improve your ROI, while running safe and productive operations.

This experience adds up, and results in multi-million dollar production improvements from reducing asset failures, automating monitoring and proactively optimizing asset performance for your business.
