| Copy button                                     | Copy selected area to the clipboard. Upon selecting this option, the cursor is restricted to the SPAJ 160 C relay area. To select the required area:
  - Press and hold left mouse button at top left hand corner of required area.
  - Move mouse to bottom right hand corner of required area. (a rectangle box is display to show the selected area)
  - Release the mouse button.
  Note: Click once anywhere to cancel the copy command |
| View Clipboard                                  | This button will launch the clipboard viewer. It allows the user to view the items copied to the clipboard. |
| Print Simulator Window                          | This function sends the current screen image to the printer attached.         |
| SPAJ 160 C manual button                        | Show SPAJ 160 C manual                                                       |
| Help on Simulator                               | Displays the help manual on how to use this simulation program              |
| Getting Started Tutorial                        | A step by step guide on how to use the program                              |
| About                                           | Display program information, version number and copyright information.       |
Menu Commands  -  File

View Clipboard - Display the contents of the clipboard

Copy to Clipboard - Copy selected area to the clipboard.
Upon selecting this option, the cursor is restricted to the SPAJ 160 C relay area.
To select the required area
  • Press and hold left mouse button at top left hand corner of required area.
  • Move mouse to bottom right hand corner of required area. (a rectangle box is display to show the selected area)
  • Release the mouse button.
Note: Click once anywhere to cancel the copy command

Print Simulator Window - Print the contents of the SPAJ 160 C window

Print Setup - Change the printer configuration

Exit - Stop running the simulator program
Menu Commands - Options

Clear All Registers - Resets all readings in registers (1 to 9) to zero

Simulate current or voltage injection - This window allows the simulation of current or voltage injection into the relay. Select the required module for which the current or voltage is to be injected. *Inject preset current* command button – Simulates the one time (static) injection of the input current into selected input of the relay.

Forced Output Activation - Places the simulator in the *Forced Output Activation* position (i.e. "forced" trip mode). Note: In the relay, this position is reached by running through the relay positions to position zero (with the reset button) and then pressing the program button down for more than 5 seconds.

Turn on/off power switch - Simulates the switching on/off of the power supply to the SPAJ 160 C relay
**Menu Commands - Preferences**

**Show Toolbar/Show Status Bar** - Displays/removes the toolbar on the screen depending on whether it is currently removed/shown respectively.

**Change LED colours** - Change the colours of the background and LED's to suit individual screens and preferences
- Click on the appropriate box to change the corresponding colour
- Click on the "Apply changes to Simulator" button to confirm the changes made
- Click on the "Apply default colours" button to set all colours to permanently set defaults
- Click on the “Cancel all color changes” button to cancel all changes made

**Change simulator speed** - Change the speed at which the simulator works. This allows for adaptations to individual hardware configurations. When this option is selected, the following window is shown
- Use the left mouse button to click on the left (or right) arrow to increase (or decrease) the simulation speed.
- Alternatively, click (and hold) the flashing box on the slide and drag it to the required position.

- Click OK to confirm the changes made or click CANCEL to ignore any changes

**Change background** - Changes the background colour of the window.

**Change to default settings** - Change all settings to the defaults set when the relay is shipped from the factory.
- **WARNING:** Selecting this option results in the lost of all current settings.

**Change to Customized Settings** - All settings are automatically saved to file when:
1. Power is turned off
2. Program exits
- These (current) settings are also automatically loaded when the program is restarted.

- Another (separate) set of settings can be saved by using the SAVE AS CUSTOMISED SETTINGS option. This allows the user to keep a set of preferred initialization settings, which can be, reload at any time using the CHANGE TO CUSTOMISED SETTINGS option.
- Selecting this option results in the lost of all current settings.
Save as Customized Settings -

All settings are automatically saves to file when:
1. Power is turned off
2. Program exits
These (current) settings are also automatically loaded when the program is restarted.

Another (separate) set of settings can be saved by using the SAVE AS CUSTOMISED SETTINGS option. This allows the user to keep a set of preferred initialization settings, which can be, reload at any time using the CHANGE TO CUSTOMISED SETTINGS option. Selecting this option results in the lost of all current settings.
