

CAP 505 and Connectivity Package 64-bit Add-on

Document Id
1MRS228768

Date
September 17, 2018

Scope

CAP 505 ver. 2.5.0 isn't capable to export or use project or IED files in 64-bit Windows operating systems. Similarly some Connectivity Packages are not able to import AR files in 64-bit Windows operating systems. This add-on package enables AR file handling in 64-bit operating systems.

Pre-requisites

This add-on can fix only the software packages that are already installed on the target PC. If some additional Connectivity Packages or CAP 505 are installed afterwards, this add-on needs to be installed again.

This add-on requires .NET Framework 4.6.1 or later. The .NET Framework installation package can be downloaded from Microsoft webpages (<https://www.microsoft.com/net/download/framework>).

Affected software versions

This add-on is applicable for the following software versions:

- CAP 505 ver. 2.5.0
- ABB IED Connectivity Package for REF 541/543/545 ver. 2.2

- ABB IED Connectivity Package for REM 543/545 ver. 2.3
- ABB IED Connectivity Package for RET 541/543/545 ver. 2.3
- ABB IED Connectivity Package for REX 521 ver. 2.2

Limitations

This add-on fixes only the AR file handling in 64-bit operating systems. It doesn't enable using Relay Configuration Tool functionality in CAP 505 in a 64-bit Windows operating system.

It should also be noted that the packages which are exported from CAP 505 with this add-on will work only in an environment that also has the add-on installed. This includes the RCT projects that are written to the IED.

Support

For additional information and support, please contact your local ABB service organization. For contact information, see <http://www.abb.com/mediumvoltage>.

In case your system has been delivered by any of ABB's Partners, additional information and support can also be provided by the partner.
