

New Connector for AquaMaster Explorer

A new range of robust connectors for enhanced performance in harsh environments

As part of our continuous improvement process, we are pleased to announce the release of a new connector for our AquaMaster Explorer. Customers now have the option of ordering an AquaMaster Explorer with either the new plastic MIL-style connectors or the original Bulgin connectors.

An upgrade connection kit (part no. WABC2035) is also available to upgrade a Bulgin AquaMaster Sensor to a plastic MIL-style AquaMaster Explorer. A new battery pack with the plastic MIL-style connector is also required when upgrading.

The new connectors offer a new level of performance in a robust IP68 overmoulded design with positive bayonet coupling and are compatible with metal MIL-spec connectors – ensuring the best possible performance from your AquaMaster Explorer in harsh environments.

Pricing for the new product, upgrade kit and battery can be accessed through the InstrumentationX system.

Please don't hesitate to contact me or any member of the UK Instrumentation team with any questions that you may have.

Best regards,
