

2021 UPgrade campaign

Discover how easily ABB can upgrade your existing and any brand legacy circuit breakers with Ekip UP next-generation electrical distribution plants.

What is Ekip UP

Ekip UP is the low-voltage digital unit able to monitor, protect and control existing plants. Ekip UP is the unit that upgrades the electronics of old facilities.

When Ekip UP

When the internal or external protection trip unit of the circuit breaker is not working anymore or needs to be updated with standard or advanced protections or new features. The external unit can be interfaced with all switching devices, ABB or non-ABB switch disconnectors or automatic circuit breakers. Parameters, configurations and settings are possible from the Ekip UP intuitive touchscreen display or using the commissioning software Ekip Connect.

Why Ekip UP

New features

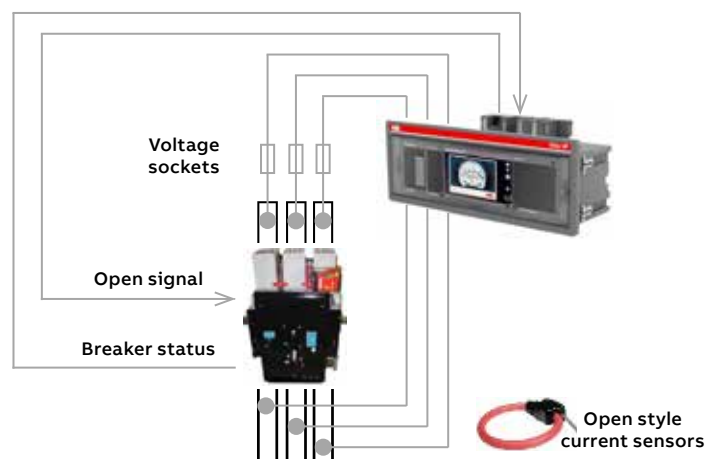

Ekip UP updates basic switchboards with new monitoring, protection and power control solutions.

It enables distribution and generator protection as a typical application of protective relays

Ekip UP, always equipped with a user-friendly color touch screen, is a cost-effective answer to upgrade every kind of electrical distribution system while also avoiding downtime. It optimizes service continuity and energy efficiency thanks to embedded software solutions, saving up to 30% on operational costs.

Easy connection

Ekip UP installation is easy thanks to its small size. It requires limited panel-space in the switchboard and it can be mounted either on a din-rail or on the panel door. Since it has open style current sensors with different sizes, no choice or stock of other brand type is needed. Furthermore, installation time is cut by 50% compared with traditional solutions. Downtime can be avoided or reduced to a very limited time.

What to order

1. Ekip UP digital unit

Protection based on	Ekip UP Protect 1SDA083360R1
