

Connect emission-free power to the grid?

ABB is helping construct the world's largest offshore wind farm. Using our eco-friendly transmission technology, this 400-megawatt plant is expected to avoid 1.5 million tons of CO₂ emissions per year and improve the reliability of the power grid. It's just one of the ways that we, as the biggest supplier of electrical products and services for the wind industry, can use renewable power sources to help combat climate change. www.abb.com/energyefficiency

Naturally.
