Course description

F850
ABB Automation Products AC500 Basic

Course Duration
The duration is 4 days.

Course Type
This is an instructor led course with interactive classroom discussions and associated lab exercises. Approximately 50% of the time is used for hands-on labs and practical exercises.

Course Goal and Learning Objectives
The goal of this course is to teach the students the basic system engineering methodology of AC500 controller using Automation Builder software and provide first hand practical experiences as well as enabling them to take on the role of PLC Engineer developing different small applications assembled in one project.

Upon completion of this course the participants will be able to:

- Explain the AC500 architecture and the functions of its components.
- Create a new project and configure the AC500 hardware with corresponding I/Os as well as a program structure.
- Configure decentralized I/O expansions via CS31 bus and PROFIBUS DP.
- Design and configure simple application programs by using a different type of IEC61131-3 languages and integrated visualization.
- Navigate and use the available libraries.
- Configure connection between AC500 and PC via Ethernet TCP/IP.
- Set-up PLC cycle time to optimize the CPU load.
- Use the diagnostics tools for system monitoring and trouble-shooting.

Student profile
This training is targeted to system and application engineers, commissioning and maintenance personnel, service engineers and system integrators.

Prerequisites and Recommendations
The student shall have a basic understanding of Programmable Logic Controllers and be familiar with operating in a Microsoft Windows environment.

Main Topics of the Training
- AC500 system architecture
- Automation Builder
- Project structures
- AC500 hardware configuration
- Decentralized I/O expansions via CS31 bus and PROFIBUS DP
- Standard operators/Functions Blocks
- AC500 Libraries
- Integrated visualization
- Project test tools and fundamentals of diagnostics
- Project backup by use of SD memory card
- Web Server
# Course Outline

<table>
<thead>
<tr>
<th>Day 1</th>
<th>Day 2</th>
<th>Day 3</th>
<th>Day 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>• AC500 hardware overview</td>
<td>• CS31 bus fundamentals</td>
<td>• PROFIBUS fundamentals</td>
<td>• Web server fundamentals</td>
</tr>
<tr>
<td>• Automation Builder installation procedure</td>
<td>• Further project engineering</td>
<td>• Further project engineering</td>
<td>• CP600 –WEB operator panels (presentation)</td>
</tr>
<tr>
<td>• Basic overview of the design and main functions of Automation Builder</td>
<td>• Project structure and components</td>
<td>• Decentralized I/O expansion via PROFIBUS DP</td>
<td>• SD memory card fundamentals</td>
</tr>
<tr>
<td>• Creation of a new project</td>
<td>• Memory structure and areas</td>
<td>• Scaling of analog values</td>
<td>• Project backup</td>
</tr>
<tr>
<td>• Hardware configuration and I/O Mapping</td>
<td>• Standard data types</td>
<td>• Subroutines, jumps and returns</td>
<td></td>
</tr>
<tr>
<td>• IP address set-up and creation of an online access to AC500</td>
<td>• Variable declaration</td>
<td>• Task configuration</td>
<td></td>
</tr>
<tr>
<td>• Programming according to IEC 61131-3 in FBD editor</td>
<td>• Programming in different editors using triggers, timer and counters</td>
<td>• Diagnostics tools</td>
<td></td>
</tr>
<tr>
<td>• Program test</td>
<td>• Operators and Libraries</td>
<td>• CPU start modes</td>
<td></td>
</tr>
<tr>
<td>• Project backup</td>
<td>• Integrated visualization</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• First diagnostics and trouble-shooting</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Online Help</td>
<td></td>
<td></td>
