Quick Start Guide
M2M Gateway ARM600

Standard Edition front and back panel (Only for ARM600 hardware variants)

Enterprise Edition front and back panel (Only for ARM600 hardware variants)

1 Ethernet port eth0
Getting started

Login to the ARM600 user interface
Connect the power cable into ARM600’s back panel (left side). Only for ARM600 hardware variants.

Connect the Ethernet cable between your computer and the ARM600 Ethernet port eth0 located on the back panel. Only for ARM600 hardware variants.

Configure your computer to use the same IP address space as ARM600. For example, your computer IP could be 10.10.10.11 with netmask 255.255.255.0. Check the connection with the ping command.

Connect to ARM600 using the Web browser. The default IP address of ARM600 is 10.10.10.10. Remember to use https and not http and port 10000.

Log in to the device. See username and password information in the Arctic Cyber Security Deployment Guideline.

Network settings
Navigate to Network → Network Configuration.

Choose Edit interface eth0, edit the configuration appropriately and click Save.

Restart the interface after saving the configuration.

Complete customer documentation is available in the product pages that can be accessed through abb.com/mediumvoltage
