

# Modbus KNX Gateway

## Strengthen the bonds, seamlessly.

Modbus is found in multiple devices in a wide variety of applications. The gateway allows the integration of Modbus servers and the KNX system quickly and easily.

### As easy as saying...

# 1

**Connect Modbus servers**  
Do the Modbus - KNX mapping once, you will be able to reuse it with other projects.

# 2

**Import/export templates**  
Retrieve templates locally or from the online ABB database, save them within your most convenient directories.

# ∞

**Endless use**  
Mapping ready! You won't need to start over each time, your templates will be always available for any future need.

An optional, **free-of-charge DCA** is available to facilitate the configuration.

The Modbus KNX Gateway integrates Modbus RTU servers with KNX installations at field level (bidirectional). The device supports standard KNX data points (DPT) and up to 100 Modbus signals. The gateway puts into operation with the ETS. Auxiliary voltage is not required.

Description	EAN	Type Code	Order Code	Weight Kg	Pcs
Modbus RTU-KNX TP Gateway, 100 Points, MDRC	4013614571084	MG/S 11.100.1.1	2CDG120089R0011	0.082	1

The cost effective gateway with high functionality and ease of use.
