

RECTracker

Next-generation REC tracking,
trading and compliance solution

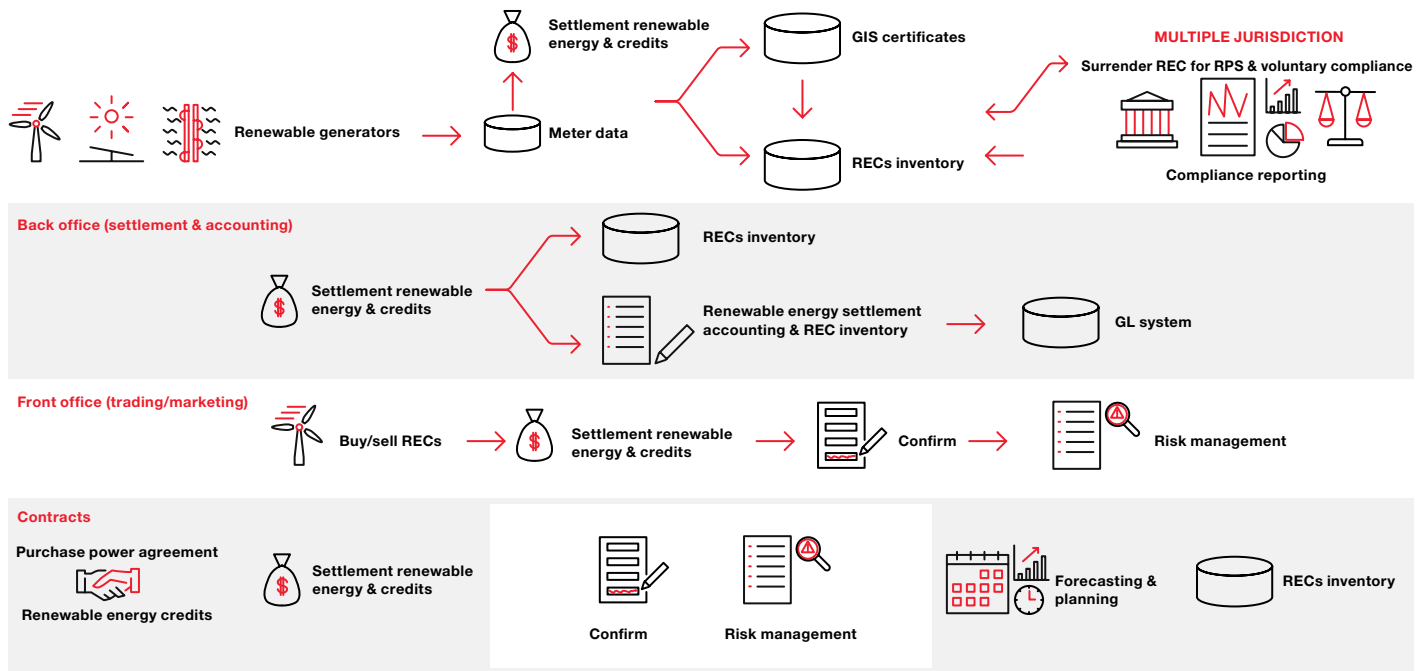

Harness the power of RECTracker and discover inventory management and compliance reporting at its best!

RECTracker is a comprehensive software solution that automates the end-to-end management and trading of renewable energy credits (RECs) also known as Green Certificates or Sustainable products.

The solution minimizes financial and regulatory risks while automating comprehensive trading, tracking, accounting, compliance and management processes related to RECs.

RECTracker is designed to facilitate enterprise-wide inventory tracking, trading and compliance, supporting multiple compliance jurisdictions and RECs tracking systems (i.e., GIS systems) for various mandatory and voluntary compliance markets.

With this advanced configurable technology, RECTracker provides a leading-edge, seamlessly integrated enterprise platform for mitigating financial and regulatory risks within your organization.

RECTracker is an integrated, flexible RECs management software package designed to support enterprise-wide tracking and compliance. RECTracker tracks REC inventories and avoids double-counting through multiple user-defined rules and controls. The solution can also support other types of environmental products to manage all compliance needs in one, fully integrated easy-to-use, web-based system.

In addition, RECTracker can automate interface with existing metering systems to import revenue quality generation data, based on this data, RECTracker can automate the creation of renewable energy contracts bundled with RECs. RECTracker can also create inventory from GIS system or reconcile RECs with GIS system.

Front office support

RECTracker provides a flexible trading platform that supports the purchase and sales of all RECs for compliance requirements or the optimization of REC Portfolios. The product can automatically match RECs from the inventory using “first in, first out” logic to meet sales or compliance obligations and avoids data errors, such as double-counting.

Middle office support

RECTracker provides confirmation and risk management capabilities, and it will seamlessly interface with your existing energy trading and risk management (ETRM) system.

Back office support

RECTracker offers the most flexible and complete user-configurable settlement and accounting processes for RECs and offers environmental products. The system also provides shadow

settlement functionality for an improved invoice reconciliation process. Invoices can effortlessly be prepared and sent to counterparties. Accrual and inventory accounting is supported. Accounting entries can be fully automated and seamlessly interface the general ledger system of choice.
