Ocal®

Corrosion-resistant conduit systems

Ocal® PVC-coated conduit and fittings represent a complete corrosion protection package for your entire conduit system.

With Ocal PVC-coated conduit and fittings, you get corrosion protection that will help extend the life of your electrical raceway system for years and years.

ABB services

Ocal® PVC-coated conduit and fittings and other ABB products – better by design to stand up to your most demanding corrosive environments.

When you're dealing with the world's most corrosive environments, just any PVC-coated conduit won't do.

- OCAL is among the industry leaders offering thread protection through a hot-dipped galvanizing process, and industry leading UL listed Type 4X PVC-coated conduit bodies.
- OCAL offers a full undisturbed zinc coating under the PVC coating, fulfilling the requirement of NEMA RN-1 regarding the restriction of harmed or eroded zinc coating over the conduit.
- OCAL is UL listed with both the zinc coating and the PVC coating investigated and listed per UL 6.
- OCAL is UL listed including UV resistance testing
- OCAL has "double-coat" coated fittings, enhancing corrosion protection by applying coating to the interior and exterior of the fittings before PVC coating.

At ABB, we're committed to:

- Convenience of single-order, single shipment to your site for thousands of stocking items
- Expert local point of contact for clear, consistent information regarding training, codes and standards
- Quality brands that have proven themselves over time
- Inventive design and manufacture of problem-solving products
- Offering a superior warranty and returns policy
- Uniform carton labeling with additional bar-coding for convenient inventory management
- Nationwide network of stocking electrical distributors
- Outstanding customer service capability
- Supplying you with the right products, convenient packaging, on-time delivery and competitive pricing

Which line of PVC-coated conduit, fittings and accessories can you trust to provide a complete corrosion-protection package for your entire electrical raceway system, extending its life for years to come? Ocal-Blue®.

We deliver the solutions that make your job easier and offer the power to bring it all together in one package. Call us today and let us help you profit from sourcing your electrical products from the leader, ABB.

Customer service

Phone: +1-800-816-7809

Fax: +1-800-816-7810

Email: us-el.installationproducts@abb.com

Customer service specialists personally serve your account and can answer questions about products, order status, price, availability and other service-related inquiries.

T&B Access®

tnbaccess.tnb.com

T&B Access® is a multi-lingual, 24-hour, seven day-a-week global sales tool for our distributor partners that offers: quote requests, stock checks, pricing inquiries, cross reference, order entry and resolution, shipping status, document and web catalog look-up, automatic order receiving, item history search, multiple-location user search, context-sensitive help, shipping confirmation and tracking, expediting, returns processing, quality issues, customer report cards. Language options in English, French, and Spanish.

Technical services

Phone: 1-888-862-3289

Call our technical services department and speak LIVE to an expert who'll answer questions and concerns regarding all aspects of our products and services.

Tool services

Phone: +1-800-284-TOOL

ABB's dedicated tool services department answers all questions regarding tool applications, repair,

warranties, sales/lease/rental and technical information. Ask about our specialized services, including customer/sales training, demos and calibration/certification of tools.

Web catalog

<https://electrification.us.abb.com/products/installation-products>

Search for technical information by catalog number, UPC code, competitor cross-reference, keyword search, product category and/or brand. Use the "where to buy" function to locate an ABB local distributor and/or other support services.

Web CAD library

<http://www-public.tnb.com/ps/pubint/cadlib.cgi>

The ABB CAD library is an online source of 2D and 3D CAD models, available FREE to customers who register. This valuable tool allows CAD designers, OEMs and engineering firms to quickly locate and download ABB drawings into their projects. Over 4,000 drawings of ABB Fittings, PMA® Cable Protection, Kindorf®, Red Dot® and Superstrut® products, as well as Steel City® and Carlon® Floor Boxes are currently available.

BIM library*

Now available to you through Autodesk® Seek (seek.autodesk.com), our BIM (building information modeling) objects can easily be imported to your Revit® models. These BIM objects are fully standards compliant, Revit® certified and completely configurable.

Overview

Ocal – better by design

Ocal® PVC-coated conduit and fittings represent a complete corrosion protection package for your entire conduit system. This product line includes an extensive number of items in stock along with corrosion-resistant supports and patching compounds. With Ocal PVC-coated conduit and fittings, you get corrosion protection that will help extend the life of your electrical raceway system for years and years.

A complete corrosion protection solution

- UL listed with both the zinc coating and the PVC coating investigated and listed per UL 6.
- UL verified for adhesion performance (DYJC) conduit: 240 hours oven conditioning at 212 °F, 600 hours salt fog chamber, peel testing
- Industry-leading thread protection through a hot-dipped galvanizing process, and industry-leading UL listed Type 4X PVC-coated conduit bodies.
- A full undisturbed zinc coating under the PVC coating, meeting the requirement of NEMA RN-1 regarding the restriction of harmed or eroded zinc coating over the conduit.
- Meets the requirements of NEMA RN-1* without exception.
- UL listed including UV resistance testing.
- “Double-coat” coated fittings, enhancing corrosion protection by applying coating to the interior and exterior of the fittings before PVC coating.
- Custom colors.

- On-site installation training and certification, and extended warranty on installations conducted by certified installers.

Standards met

- ANSI C80.1
- NEMA RN-1*
- UL 6
- UL performance verification (DYJC)

* Current as of publication of catalog

Overview

What is corrosion?

Corrosion is the gradual destruction of materials (usually a metal) by chemical and/or electrochemical reaction with their environment. This effect of corrosion is felt through millions of dollars in lost time, damaged materials and labor costs.

Corrosion protection of electrical conduit systems

Corrosion protection options

Chemical category	Chemical examples	Compatibility rating							
		PVC	URETHANE	304 stainless steel	316 stainless steel	Poly-carbonate	Cast iron	Brass	Aluminum
Solvents (excluding alcohols and aliphatic)	Acetone, toluene, ketones, etc.	NR	NR	L	L	NR	L	L	L
Fuels	Jet fuel (alcohol based and aliphatic solvent based)	L	L	L	L	L	L	L	L
Plating solutions	Chrome, nickel, copper, brass, gold, zinc, etc.	L	F	F	F	F	NR	NR	NR
Salts and alkaline materials	Caustic soda, caustic potash, alkaline cleaners, etc.	L	F	L	L	F	NR	NR	NR
Mild acids	Low-concentration hydrochloric, sulfuric, fruit acids, glycolic, citric, etc.	L	S	L	L	S	NR	NR	NR
Strong or high-purity acids	Nitric, hydrofluoric, etc.	S	S	F	F	S	NR	NR	NR
Oxidizing agents	Bleach, chlorine, hydrogen peroxide, etc.	L	S	L	L	S	NR	NR	NR

Chemical compatibility legend

Suitability description	Compatibility rating
Rated for all fumes, splash and liquid	L
Rated only for fumes and splash	S
Rated for fumes only	F
Not recommended	NR

The chart above provides a general guide for selection of the most suitable material for corrosion protection. Compatibility with chemical environment should be thoroughly evaluated for each installation.

PVC-coated conduit and fittings are suitable for almost all applications. When it comes to PVC-coated conduit systems, you can count on Ocal quality.

Examples of corrosion

Overview

Ocal manufacturing process

The Ocal® PVC-coated conduit system fully complies with all standards for proper use and protection in corrosive environments mandated by UL 6, NEMA RN-1* and ANSI C80.1. Ocal products are manufactured right here in the United States by ABB in our Jonesboro, AR facility.

The process of manufacturing PVC-coated conduit

—
01 The steel shell is threaded and prepared for the hot-dip galvanizing process.

—
02 The threaded shell is immersed in a molten zinc bath. This hot-dip galvanizing process enables the zinc to penetrate the internal and external surface of the steel conduit, providing an excellent corrosion protection. After the conduit is extracted from the zinc bath, super-heated steam is blown through the interior and over the outside of the conduit to remove any slag. ABB manufactures steel conduit that hot-dip galvanizes the threads as well as the conduit itself.

—
03 After priming, the conduit is heated and then rolled through liquid plastisol, achieving complete coverage of 40 mils in thickness. Following the exterior PVC coating, 2 mils (nominal) of blue urethane is applied to the inside diameter as well as to the threads of each conduit.

—
04 Standard color is dark gray. Custom colors available upon request.

Ocal offers

- Plant walk-throughs
- Installation training and certification
- Installation tools
- The expertise to ensure that you get the maximum benefit of the Ocal-Blue® total protection system
- Manufacturing capabilities that ensure unmatched delivery time on custom orders, special colors or large quantities
- Protection of each shipment with special packaging to help provide damage-free delivery

Superior service

Our reputation for dependability and customer service has made Ocal one of the most trusted names in corrosion protection for the electrical industry.

* Current as of publication of catalog

Overview

Complete corrosion protection

ABB has developed a process for coating the interior and exterior of all Ocal® fittings with a nominal 0.002" (2 mils) of blue urethane, which is baked on. This proprietary application of urethane enhances the corrosion protection of your system, even if you accidentally nick or cut the PVC coating during installation. Flexible, overlapping sleeves on all Ocal fittings provide protection with a vapor- and moisture-tight seal at every connection.

The process of manufacturing PVC-coated fittings

- Fittings are cleaned and then sprayed inside and outside with 2 mils (nominal) of blue urethane
- This gives the fittings corrosion protection on the exterior as well as the interior – all fittings are “double-coated”
- 40 mils of PVC is applied to the exterior of the fitting
- Covers are coated with a molded flange and molded integral O-ring seal for 2½"-4" Form 8 and all Form 7 conduit bodies are molded with a flat surface to ensure a superior seal
- Standard color is dark gray. Custom colors available upon request

ABB takes pride in providing PVC-coated conduit and fittings compliant with industry-wide recognized standards. It is this dedication to superior quality that makes Ocal “Better by design.”

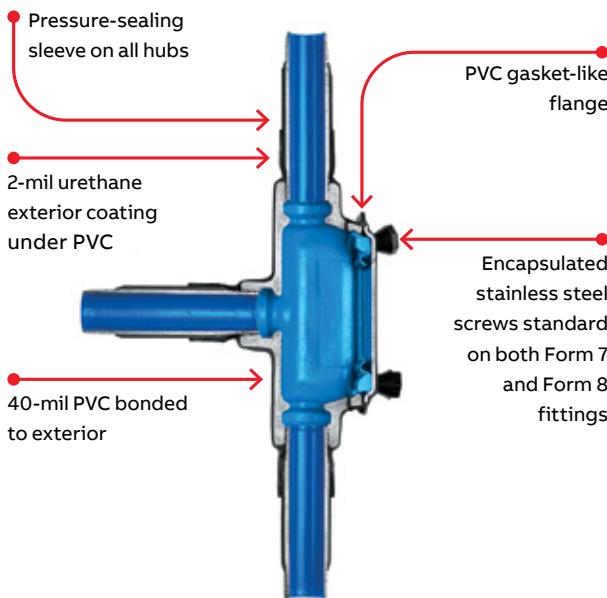

ABB supplies encapsulated screws on Ocal Form 7 and Form 8 conduit bodies.

Ocal-Blue® double-coat UL listed Type 4X and NEMA 4X Form 8 conduit bodies

For the conduit system that has to stand up to a corrosive environment, the Ocal-Blue Type 4X Form 8 conduit body is up to the challenge. The key is in the cover. ABB takes a cast cover and then injection molds a PVC coating around it with an integral O-ring seal.

There's no need for tools or gaskets. To meet the harsh requirements of the UL Type 4X listing, you need only hand-tighten the stainless steel encapsulated screws to 15 in.-lbs. of torque – as compared to the 35 in.-lbs. of torque required to tighten cover screws on many other conduit bodies.

Ideal for providing corrosion-resistant performance in washdown and other tough applications, Ocal-Blue Type 4X Form 8 PVC-coated cast-iron conduit bodies are now available in sizes up to 2". Look for the blue to know it's a high-quality Ocal product.

Overview

Evaluating corrosion protection of PVC-coated conduit

—
01 Example of hot-dip galvanized threads after 42-day salt-fog test

—
02 Example showing how a zinc coating surpasses the requirement for corrosion resistance

When evaluating any electrical raceway conduit or fittings, applicable standards should be referenced. The three standards that address the design and performance of PVC-coated rigid steel conduit are ANSI C80.1, UL 6 and NEMA RN-1. ANSI C80.1, UL and NEMA have determined the appropriate ASTM standards and test methods that apply.

Hot-dip galvanized threads

Since electrical conduit systems breathe, the threads will be exposed to the corrosive environment for the duration of the installation. NEMA RN-1-2005 is the electrical industry's standard for PVC externally coated galvanized rigid steel conduit. Section 2.1 of this standard states, "Where unusually corrosive environments are encountered, it is recommended that threads be given additional protection suitable for the intended application." Hot-dip galvanizing is the process through which the steel shell is dipped in molten zinc, causing the zinc to penetrate the steel. ABB hot-dip galvanizes the threads of the Ocal® conduit, in addition to the conduit itself. This gives the threads the protection recommended in corrosive environments.

The standard for rigid metal conduit, UL 6, sets out ASTM B117, a salt-fog test as the standard corrosion test. The photographs below present compelling evidence of the protection hot-dip galvanizing provides against the corrosive agent, salt.

Galvanized conduit underneath the PVC coating – Preece test

With much riding on the integrity of electrical conduit systems, facilities need the superior protection offered by the ABB Ocal PVC-coated conduit, which complies with the current design and performance standards for PVC-coated conduit set forth by UL 6, NEMA RN-1 and ANSI C80.1. ANSI C80.1, UL 6 and NEMA RN-1 have established the appropriate ASTM standards and test methods. The Preece test must be passed to be in full compliance.

Why is the Preece test relevant to PVC-coated conduit?

In cases where the PVC protection is accidentally breached, resulting from cuts, scrapes, etc., it is critical to have a second line of defense – a zinc, or galvanized, coating. The zinc coating will significantly slow corrosion before failure occurs. Conduit systems without adequate zinc protection underneath the PVC coating are most likely to suffer catastrophic corrosion damage. This is why NEMA RN-1 section 3.1.1 requires the proper and correct treatment of galvanized conduit before it is PVC coated. It states, "The surface shall be cleaned in such a manner that the galvanized surface of the conduit is not harmed or eroded."

—
02

The Preece test evaluates the zinc coating on galvanized rigid conduit to ensure adequate protection from corrosion per UL 6.2.2. The test will also determine if the surface of the conduit has been damaged as a result of preparation for PVC coating.

In evaluating the test results, the conduit receives a passing grade when the sample does not show a bright, adherent deposit of copper after four 60-second immersions in the copper sulfate solution. The conduit showing the bright, firmly adhering copper has failed to provide adequate zinc protection against corrosion.

The Preece test follows procedures set forth by UL 6.2.2 and ASTM A239 and is the test recognized by UL 6, NEMA RN-1 and ANSI C80.1 to adequately assess zinc protection for rigid steel conduit. The Ocal line of PVC-coated conduit systems, manufactured by ABB, currently complies with UL 6, NEMA RN-1 and ANSI C80.1 without exception.

Overview

Adhesion test

01 Step 1 consists of two cuts through the plastic to the substrate along the length of the conduit, approximately 1/2" apart and 3" to 4" in length. A third, perpendicular, cut crosses the lengthwise parallel cuts.

02 Step 2 calls for the edge of the PVC that was cut on the perpendicular to be carefully lifted to form a plastic tab.

03 Step 3 the tab is pulled perpendicular to the conduit with a pair of pliers. The plastic tab will tear off rather than having any peeling effect or the coating separating from the substrate.

04 Step 4 is the evaluation of the test, which in this case, results in a passing grade for the Ocal conduit. This result is more testimony to the fact that Ocal is "Better by Design."

The evaluation process for adhesion of PVC coating on conduit is governed by NEMA RN-1 section 3.8, Adhesion, which states, "The adhesion of the PVC coating to the conduit shall be greater than the strength of the coating itself." This adhesion test is straightforward and simple.

There are no specialized conditions necessary to perform this test. ABB routinely performs quality-control testing – including the adhesion test – on Ocal conduit as it rolls off the line. Conduit that passes this test demonstrates that the adhesion will provide years of trouble-free service.

The following demonstration shows Ocal® PVC-coated conduit being subjected to the adhesion test.

Results

With Ocal PVC-coated conduit and fittings, you get corrosion protection that will extend the life of your electrical raceway systems for years and years.

Ocal-Blue® conduit

The ultimate in corrosion protection

Ocal-Blue conduit

Product features

- UL verified for adhesion performance (DYJC) conduit: 240 hours oven conditioning at 212 °F, 600 hours salt fog chamber, peel testing
- Hot-dip galvanized steel or aluminum conduit
- Nominal 0.002" (2 mil) blue urethane coating on interior
- Hot-dipped galvanized threads (steel)
- Minimum 0.040" (40 mil) PVC coating on exterior
- Standard color is dark gray – custom colors available upon request
- Color-coded thread protectors
- Couplings shipped with conduit are packaged separately

Ocal-Blue® double-coat split couplings

Join threaded conduit where you can't use a standard coupling

TCC split coupling

Split couplings serve as speed unions for cost-effective joining of two separate lengths of threaded conduit. Like other Ocal® fittings, they're double coated in urethane and PVC to help safeguard your entire conduit system against corrosion.

Product features

- Malleable iron construction
- Nominal 0.002" (2 mil) blue urethane on both interior and exterior
- Minimum 0.040" (40 mil) PVC bonded to exterior
- Standard color is dark gray – custom colors available upon request
- Stainless steel hardware included separately

Ocal-Blue® nipples

Speed up your field installations with pre-threaded conduit nipples

PVC-coated conduit nipples – steel

Product features

- Made from Ocal® PVC-coated steel or aluminum conduit
- Blue urethane coating over threads
- Nominal 0.002" (2 mil) blue urethane on interior
- Minimum 0.040" (40 mil) PVC coating on exterior
- Standard color is dark gray – custom colors available upon request
- Color-coded thread protectors for easy identification of conduit size
- Available in 11 standard lengths – close and 2" to 12" with custom lengths available on request
- Close nipples are coated only in urethane

radius of 18" and an angle of 45°, coated in dark gray PVC.

Standard offering is dark gray (G).
Custom colors also available.

Ocal® PVC-coated beam clamps and U-bolts

PVC coating evenly molded around saddle prevents exposure of metal – an Ocal exclusive

Parallel (PAR)

Edge (EC)

Product features

- Beam clamps support and attach conduit runs to structural beams
- Molded right-angle beam clamps and U-bolts provide extra protection
- Encapsulated, hex-shaped nuts fit standard wrenches
- Stainless steel hardware included
- Parallel (PAR) and edge (EC) clamps feature nominal 0.015" (15 mil) PVC coating for corrosion protection
- Right-angle clamps (RA) and U-bolts (UB) feature nominal 0.040" (40 mil) PVC coating for corrosion protection

Ocal-Blue® double-coat conduit bodies

Easy access for pulling, splicing, mounting and maintenance

With Ocal-Blue double-coat conduit bodies, you can connect sections of conduit – with or without 90° bends – and provide easy access for wire pulling, making splices in branch conductors and for maintenance and future system changes. Conduit bodies can also serve as mounting outlets for wiring devices and lighting fixtures.

Product features

- Type 4X Form 8 (½"-2") conduit bodies have injection-molded PVC-coated cover with integral O-ring seal
- Flat surface molded on conduit body seals with molded flange on cover on 2½"-4" Form 8 and all Form 7
- Available in Form 7 and Form 8 ferrous as well as Mark 9 and Form 7 aluminum
- All Ocal-Blue conduit bodies offer double corrosion protection – both bodies and covers coated inside and out with a nominal 0.002" (2 mil) blue urethane, then exterior coated with a nominal 0.040" (40 mil) PVC
- Standard color is dark gray – custom colors available upon request

- All threaded hubs fitted with pressure-sealing sleeves
- Conduit bodies ship complete with covers and encapsulated stainless steel screws
- Covers also sold separately for replacement or retrofit purposes

Ocal-Blue® double-coat pulling elbows

Make 90° bends while allowing straight pulls

LBD2200-G

LBD and LBH bodies are installed at 90° bends in rigid conduit to act as pull outlets for conductors that are stiff due to large size or type of insulation and to make 90° bends in conduit system while allowing straight wire pulls in either direction.

Product features

- Choose LBD series for ordinary locations and LBH series for hazardous locations
- Coated with a nominal 0.002" (2 mil) blue urethane on both interior and exterior
- Nominal 0.040" (40 mil) PVC coating bonded to exterior
- Pressure-sealing sleeves seal connections

Ocal-Blue® double-coat mogul fittings

Make 90° bends while allowing straight pulls

BC3-G mogul

BLB4-G mogul

BUB3-G mogul

BG48-G replacement cover

Install mogul fittings in conduit systems to act as pull outlets for conductors that are stiff due to large size or type of installation, to provide the longer openings needed when pulling large conductors, to prevent sharp bends and kinks in large conductors or to provide more splicing space.

Product features

- Nominal 0.002" (2 mil) blue urethane on both interior and exterior
- Nominal 0.040" (40 mil) PVC coating bonded to exterior
- Pressure-sealing sleeves protect connections

Ocal-Blue® double-coat hubs

Unique sealing ring and groove design for optimum performance

HUB1-1/4-G
PVC-coated zinc hub

STG6-G
PVC-coated zinc grounded hub

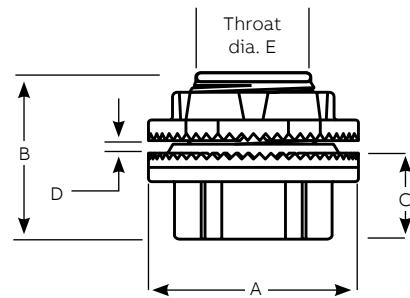

Product features

- Captive sealing ring won't buckle or slip during installation and provides a complete 360° seal – even when conduit isn't perpendicular to the enclosure
- Hexagonal/splined body and locknut enable fast and easy installation
- Insulated throat molded from 105° C-rated thermoplastic, UL94-V0 flammability rated
- Sharper and deeper teeth provide a more penetrating bite for improved bonding to the enclosure
- Zinc or copper-free aluminum with a nominal 0.040" (40 mil) PVC coating bonded to exterior
- Standard color is dark gray – custom colors available upon request
- Pressure-sealing sleeves help protect your connections

Ocal® PVC-coated bushings

Threaded insulated grounding bushing

Shown un-coated

Application

- For quick installation of bonding jumper to multiple metal conduits (rigid and IMC)
- Designed to bush conductors and prevent insulation damage

Features

- Ease of installation, lay-in lug design
- Cast malleable iron body designed to lock insulator in place within body, reducing common assembly problem resulting in dislodging of insulator
- Insulator rated for 150 °C/302 °F application
- Look for the unique blue color, ensuring the highest quality fitting

Standard material/finish

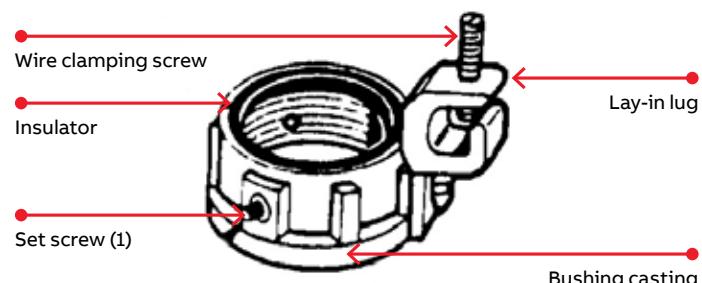

- Body: Electro zinc plated
- Lay-in lug: Aluminum/tin plated
- 40mil PVC coating

Ocal-Blue® double-coat reducing couplings

Easily join two different sizes of conduit

REC21-G

Product features

- Integral bushings in both ends prevent damage to wires
- Funnel-shaped interior guides wires from large to small conduit, making them easier to pull
- Nominal 0.002" (2 mil) blue urethane coating on both interior and exterior
- Nominal 0.040" (40 mil) PVC coating bonded to exterior
- Pressure-sealing sleeves protect connections

Note: Whenever possible, it is recommended to use reducing couplings (REC series) over reducing bushings (RE series).

Ocal® PVC-coated XJG rigid conduit expansion coupling

No disassembly required

—
01 Slide the fitting onto the conduit until it stops at the internal sliding bushing. Tighten and you're ready. No parts to reassemble!

—
02 With a wrench, tighten the gland nut to create a rain-tight seal around the conduit.

—
03 Thread the next length of conduit into the other end of the fitting and tighten. You're done!

When you install a rigid expansion coupling in a long conduit run, you normally need three hands, two strong backs and lots of patience. Now you can relax.

With the no-hassle XJG rigid conduit expansion coupling, installation's just a few turns and you're done.

The XJG rigid conduit expansion coupling features innovations that provide convenience to the installer, saving time and money on the job. No disassembly is needed during installation, requiring fewer tools and less opportunity for lost pieces. It also features a true internal bonding jumper, eliminating the need for external jumpers, so there are fewer parts to buy and install.

If you need a fitting that can give and take without a lot of hassle, reach for the XJG rigid conduit expansion coupling. It's the latest breakthrough in the industry's leading line of conduit fittings.

Innovative design makes installations easier.

- No disassembly necessary to install
- Fast, simple and requires fewer steps
- True internal bonding jumper – no external grounding strap required
- Tamper-proof internal jumper protected from the environment
- Exceeds code requirements for long conduit runs to permit linear movement

Ocal® PVC-coated XJG rigid conduit expansion coupling

Standard materials/finish

- Body/finish: Ductile iron with nominal 40-mil PVC exterior coating
- Internal bonding jumper: Copper braid

Coupling shown uncoated

Ocal® PVC-coated XD expansion/deflection coupling

Watertight, flexible connections support movement and thermal expansion

Use the XD expansion/deflection coupling to join two conduit runs in applications where movement in any direction is required. The coupling provides a flexible, watertight connection, accommodating axial or parallel movement of up to $\frac{3}{4}$ " and angular movement of up to 30° from normal.

- Ideal for use in bridges, tunnels, interbuilding walkways, docks and piers, wastewater and water treatment facilities and other applications in which conduit runs are subject to movement due to external forces or temperature changes
- Suitable for use indoors, outdoors, direct buried or embedded in concrete
- Watertight, flexible neoprene outer jacket, zinc-plated and acrylic-painted hubs and stainless steel tamper-proof straps ensure superior corrosion resistance – ideal for use in harsh environments
- Copper ground mounting plates and grounding bonding jumper both entirely enclosed to safeguard against theft
- Includes an Erickson® type conduit union for faster, easier installation to help reduce labor costs
- Durable stainless steel inner sleeve provides a constant, smooth inner diameter in any position to ease wire pulling and protect wire insulation from damage

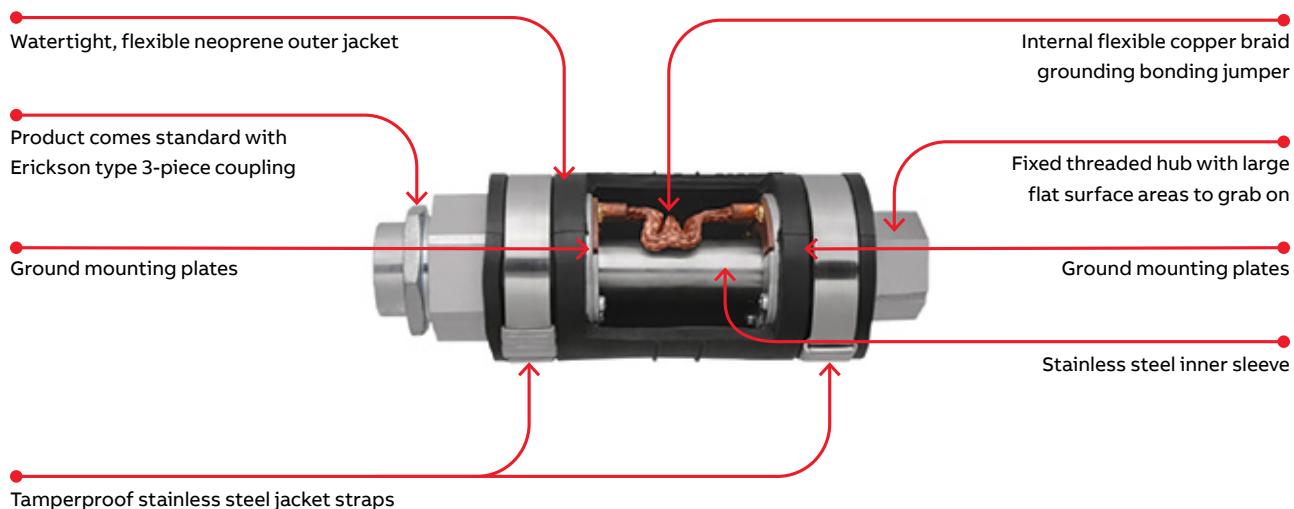

- NPT threaded hubs fit standard threaded rigid metal conduit
- Can also be used with rigid PVC conduit with the use of standard adapters (not supplied)

Listings/compliances

- UL listed to UL 514B and CSA certified to C22.2 No. 18.3, suitable for wet locations (hub sizes 1"-6")
- Watertight-NEMA 4
- NEC Article 250.98 and 300.4(A) compliant

Standard materials/finish

- Hub: ductile cast iron, zinc-plated and aluminum acrylic painted
- Inner sleeve: stainless steel
- Internal grounding bonding jumper: flexible copper braid
- Ground mounting plates: copper
- Hub rings: zinc-plated steel
- Outer jacket: molded neoprene (natural black)
- Jacket straps: stainless steel

Standard liquidtight female

Hub adapter

Application

- Transition from liquid tight conduit to threaded pvc coated rigid conduit

Standard material 5270 series

- Body, gland, locknut and ground cones: steel ($\frac{1}{4}$ "– $\frac{1}{4}$ ") or malleable iron ($1\frac{1}{2}$ "–2")

Standard finish 5270 series

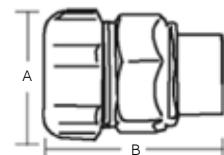

- Electro zinc plated with chromate coating
- 40 mil pvc external coating

Standard liquidtight female

Ocal-Blue® double-coat Star Teck Extreme® STE series fittings for ordinary locations

The ideal fitting for jacketed metal-clad cable in ordinary locations

Product features

- Provides a means for passing armored and metal-clad jacketed cables through a bulkhead or enclosure
- Forms a mechanical grip and a water- and oil-resistant termination
- Provides grounding continuity of cable armor
- Removable armor stop accommodates a wide range of cable sizes
- Features built-in sealing device and jacket stripping gauge, elastomeric collar ring/bushing and grounding ring
- Aluminum construction
- Nominal 0.002" (2 mil) blue urethane coating on both interior and exterior
- Nominal 0.040" (40 mil) PVC coating bonded to exterior

Ocal-Blue® double-coat FS and FD series device boxes

Variety of styles offers versatility

FS2-G FSC2-G FS22-G FSR2-G FSL2-G

FSC222-G FS222-G FSS222-G FSCC2-G FSS2-G

Install these boxes in conduit systems to accommodate wiring devices, act as pull boxes for conductors, provide openings to make splices and taps and allow for access to conductors for maintenance and future system changes.

Product features

- Cast class 30 gray iron alloy boxes
- Coated with a nominal 0.002" (2 mil) blue urethane on both the interior and exterior before PVC coating is applied
- Nominal 0.040" (40 mil) PVC coating bonded to the exterior
- Standard color is dark gray – custom colors available on request
- Pressure-sealing sleeves protect connections with conduit

[†]CSA approved for hazardous locations.

^{††}Ratings prior to PVC coating.

ABB sealing compounds – Used for hazardous locations

Product code	Description	Volume
SC4-KIT	Liquid-type sealing compound for use in control cable applications	2.8 fl. oz.
SC65	Putty-type sealing compound	60 g

Ocal® PVC-coated explosion-proof fittings

GUA, UNY, EYS and EYD series fittings are now **UL 1203 listed.**

Tested and listed after PVC coating as finished goods for confidence and peace of mind.

- 01 GUAW24G
- 02 GUA24G
- 03 UNY205G

Electrical equipment for use in explosive environments must be carefully selected to ensure it can be safely installed without triggering an explosion.

Ocal GUA, UNY, EYS and EYD series fittings give you confidence with a UL 1203 listing for use in explosive environments.

Explosion-proof Ocal GUA series conduit boxes, UNY conduit unions, EYS series sealing fittings and EYD series drain sealing fittings are now UL 1203 listed for explosion protection.

Some manufacturers rely on uncoated castings' certification for explosion protection, but the product was never subjected to explosion-proof testing as a finished good.

When you're dealing with a hazardous classified, explosion-prone environment, using Ocal UL 1203 listed components gives you the peace of mind that you have the certification and protection you need.

Ocal-Blue® double-coat UNY and UNF series conduit unions

Explosion-proof, dust-ignition-proof three-piece couplings

UL 1203 listed

Features:

- Explosion-proof
- Dust-ignition-proof
- UV-resistant dark gray PVC coating
- Nominal 0.002" (2 mil) blue urethane coating on both interior and exterior
- Nominal 0.040" (40 mil) PVC coating bonded to exterior
- PVC coating helps provide corrosion protection and helps maintain grounding continuity of the rigid conduit system
- Flexible PVC sealing sleeves help provide corrosion protection to threaded connectors

Applications:

- UNY male unions are used to connect rigid conduit to a conduit fitting, junction box, control station enclosures, or to other electrical component containing enclosures
- UNF female unions are used to connect two adjacent rigid conduits and provide a means for future modifications to the system
- For use in rigid conduit systems located:
 - Indoors or outdoors
 - In wet locations
 - In hazardous locations
 - In areas where corrosion protection is needed

Compliances and certifications:

- UL Certified
 - **UL 1203**
 - **CSA C22.2 No. 25 and No 30**
- NEC/CEC
 - Class I, Divisions 1 and 2, Groups B, C, D (steel and iron only)
 - Class I, Divisions 1 and 2, Groups C, D (aluminum only)
 - Class II, Divisions 1 and 2, Groups E, F, G
 - Class III
- NEMA Standard RN-1

Material / finishes:

- Steel / dark gray PVC coating (½"-1")
- Iron / dark gray PVC coating (1¼"-4")
- Aluminum / dark gray PVC coating

See following page for ordering information.

Ocal-Blue® double-coat GUA series conduit boxes

Provide access to wiring, directional changes in conduit and more

GUAB

GUAX

GUAC

GUAT

UL 1203 listed

Features:

- Explosion-proof and dust-ignition-proof
- Raintight and wet location rated
- UV-resistant gray PVC coating
- Available in multiple hub configurations
- Provides easy access to conductors for maintenance and future system changes
- Nominal 0.002" (2 mil) blue urethane coating on both interior and exterior
- Nominal 0.040" (40 mil) PVC coating bonded to exterior
- Pressure-sealing sleeves
- Internal grounding screw

Applications:

- Can be used as a junction in conduit for wire and splices
- Connects lengths of conduit and maintain ground continuity
- For use in rigid conduit systems located:
 - Indoors or outdoors
 - In wet locations
 - In hazardous locations
 - In areas where corrosion protection is needed

Compliances and certifications:

- UL certified
 - UL 1203
 - CSA C22.2 No. 25 and No 30
- NEC/CEC
 - Class I, Divisions 1 and 2, Groups C, D
 - Class II, Divisions 1 and 2, Groups E, F, G
 - Class III
- NEMA
 - NEMA ratings: 3 and 4X (with O-ring installed)
 - NEMA standard RN-1

Material / finishes:

- Body: Ductile iron or aluminum / dark gray PVC coating
- Cover: Aluminum / dark gray PVC coating

Ocal-Blue® double-coat EYS and EYD series sealing fittings

Restrict the passage of gases, vapors and flames at atmospheric pressure and normal ambient temperatures

UL 1203 listed

EYD

EYS

Features:

- Explosion-proof
- Dust-ignition proof
- UV-resistant dark gray PVC coating
- Designed to isolate sections of conduit runs from passage of vapors, flame or gases
- Designed to limit explosion damage to the sealed-off enclosure and limit pre-compression or pressure piling in conduit system
- Helps maintain ground continuity

Applications:

- For use in rigid conduit systems located:
 - Indoors or outdoors
 - In wet locations
 - In hazardous locations
 - In areas where corrosion protection is needed
- In hazardous locations, seal fittings are needed for the following instances:
 - Where conduit enters an enclosure that contains arcing or high temperature equipment
 - Where conduit enters enclosures that house terminals, splices or taps if the conduit is 2" trade size or larger
 - Where the conduit leaves a Division 1 area or passes from a Division 2 hazardous area to a non-hazardous location

Compliances and certifications:

- UL certified
 - **UL 1203**
 - **CSA C22.2 No. 25 and No 30**
- NEC/CEC
 - Class I, Divisions 1 and 2, Groups C, D
 - Class I, Divisions 1 and 2, Groups A, B, C, D (EYS/EYD 1/2"-1")
 - Class II, Divisions 1 and 2, Groups E, F, G
 - Class III
- NEMA
 - NEMA ratings: 3 and 4
 - NEMA standard RN-1
- Sealing fittings are only approved to be used with Crouse-Hinds Chico A compound and Chico X fiber*

Material / finishes:

- Body: Ductile iron or aluminum / dark gray PVC coating
- Cover: Ductile iron or aluminum / dark gray PVC coating
- Plugs: Iron or steel / zinc plated
- Breather/drain: Stainless steel / natural
- Close nipples: Steel / natural

Ocal-Blue® double-coat EZS and EZD series sealing fittings

Restrict the passage of gases, vapors and flames at atmospheric pressure and normal ambient temperatures

UL 1203 listed

EZS

EZD

Features:

- Explosion-proof
- Dust-ignition proof
- UV-resistant dark gray PVC coating
- Designed to isolate sections of conduit runs from passage of vapors, flame or gases
- Designed to limit explosion damage to the sealed-off enclosure and limit pre-compression or pressure piling in conduit system
- Helps maintain ground continuity

Applications:

- For use in rigid conduit systems located:
 - Indoors or outdoors
 - In wet locations
 - In hazardous locations
 - In areas where corrosion protection is needed
- In hazardous locations, sealing fittings are needed for the following instances:
 - Where conduit enters an enclosure that contains arcing or high temperature equipment
 - Where conduit enters enclosures that house terminals, splices or taps if the conduit is 2" trade size or larger
 - Where the conduit leaves a Division 1 area or passes from a Division 2 hazardous area to a non-hazardous location

Compliances and certifications:

Chico sealing compound and fiber

Ensures proper functioning of sealing fittings.

SEAL-A3

FIBER-X6

Ocal-Blue® double-coat sealing fittings require fiber filler and sealing compound to function properly. Use Chico X fiber filler to form a dam around the sealing fitting's integral bushing, as well as at the end of the conduit and around conductors entering the hub. Chico A sealing compound expands slightly while hardening and bonds to the inner walls of the sealing fitting.

Product features

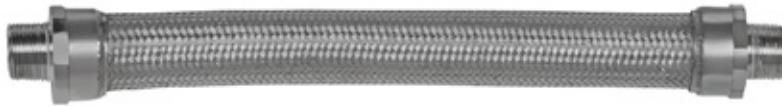

- Sealing compound mixes with water, pours easily and hardens in 60–70 minutes
- Fiber filler mineral wool holds sealing compound in place while it hardens

Chico sealing compound and fiber

Product code	Description
SEAL-A3	Chico A sealing compound, 1 lb. net wt./23 cu. in. vol.
FIBER-X6	Chico X fiber filler, 8 oz.
SEALKIT-A4	Chico A sealing compound, 1 lb. net wt./23 cu. in. vol., with 1 oz. Chico X fiber filler

Stainless steel explosion-proof flexible couplings

Features and benefits:

- Corrosion-resistant design, ideal for wash-down areas
- Flexible construction with arc-resistant inner sleeve
- Terminated with two threaded male end fittings
- NPT threads

Applications:

- Used to achieve tight bends in conduit systems in confined spaces
- Can be used to connect stationary equipment to equipment that vibrates

Conforms to:

- cULus listed UL 1203
- Class I Div 1 Groups A, B, C, D: $\frac{1}{2}''$ – $\frac{3}{4}''$
- Class I Div 1 Groups C, D: $1''$ – $2''$
- Class II Div 1 Groups E, F, G: $\frac{1}{2}''$ – $2''$
- IP69 rated for wet locations

Material

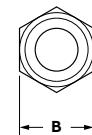

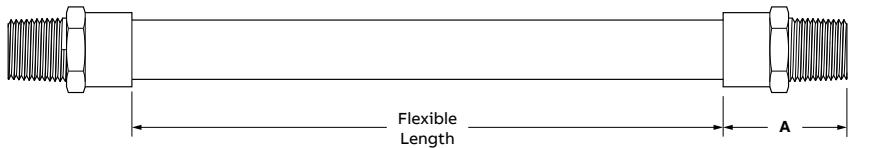

- Body: Flexible stainless steel 316
- Fitting: Stainless steel 316

Product features

- Electro-galvanized zinc-plated steel
- Nominal 0.007–0.015" (7–15 mil) PVC coating
- Standard color is dark gray – custom colors available upon request
- Sold in 10-ft. (3.048 m) lengths with standard length tolerance of $\pm \frac{1}{8}$ " (3.18 mm)
- Choose between standard $1\frac{5}{8}$ " (41.28 mm) and shallow $1\frac{3}{16}$ " (20.64 mm) depths
- Available in both solid and punched styles
- Not recommended for vertical applications

Stainless steel strut

Type 304 or Type 316 stainless – cold-roll formed for strength

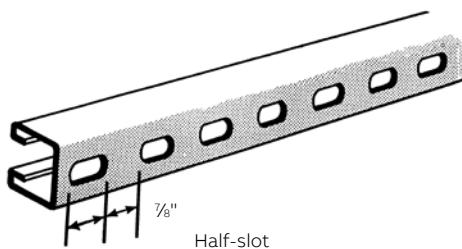

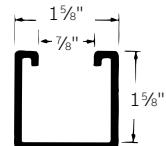

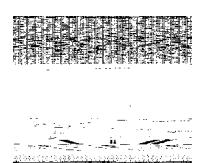

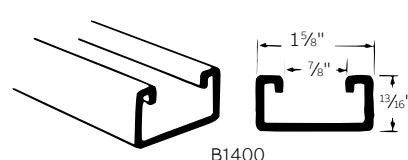

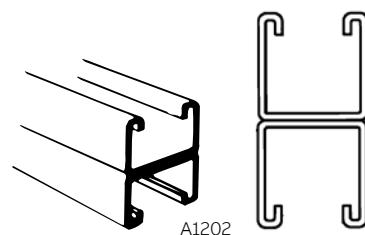

Product features

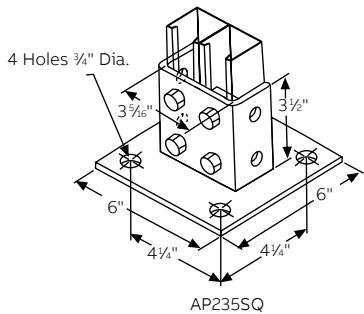

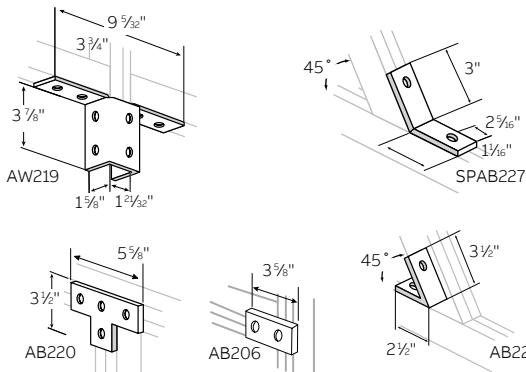

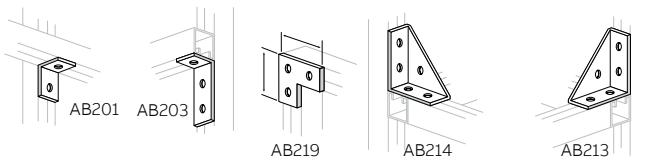

- 12- or 14-gauge Type 304 or Type 316 stainless steel
- Available in 10-ft. (3.048 m) and 20-ft. (6.096 m) lengths with standard length tolerance of $\pm \frac{1}{8}$ " (3.18 mm)
- Choose standard or shallow and solid or half-slot style

All-thread rod

Continuously threaded rod for use with conduit hangers and strut to suspend overhead conduit runs

Product features

- All-thread steel rod coated with nominal 0.007–0.015" (7–15 mil) PVC
- Available in 1/4", 3/8" or 1/2" standard diameters and in 3-, 6- or 10-ft. standard lengths
- Also available uncoated in Type 304 or Type 316 stainless steel
- Stainless steel all-thread rod comes in 3/8" or 1/2" diameters in 6-ft. standard lengths with other diameters and lengths available on request

Pipe straps for strut

Designed for easy attachment of conduit to strut

Stainless steel Cobra® clamp

PVC-coated pipe strap

Just twist-insert these pipe straps anywhere you need them along the slot side of a channel. For additional flexibility, you can position the straps as closely as your pipe couplings permit.

Product features

- Combination slot and hex head bolt for flexibility of attachment
- Captivated square nut on shoulder enables easy one-handed tightening
- Use with either 1 $\frac{5}{8}$ " or 1 $\frac{1}{2}$ " strut for greater versatility
- Shipped pre-assembled for easier counting, sorting and handling
- Nominal 0.007–0.015" (7–15 mil) PVC coating
- Standard color is dark gray – custom colors available upon request
- Or choose uncoated Cobra® Clamps in Type 316 stainless steel

Trapnut® strut fastener

Fewer parts, less installation time and huge labor savings

01 Hold in the open position

- No need to thread the Trapnut fastener from either end of the rod – saves valuable time
- Perfect for retrofit applications where rod ends are not accessible

02 Insert the bottom plate on the rod and close the top plate

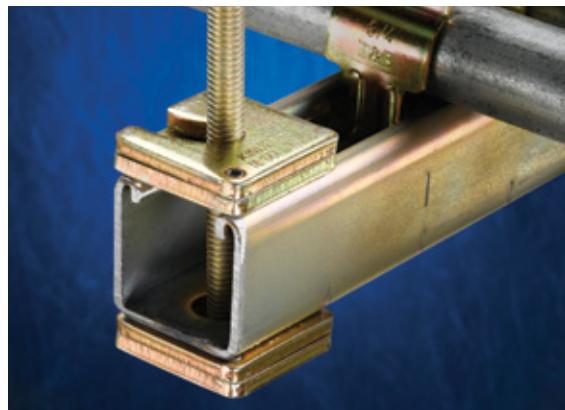

- Precision threads trap the threaded rod for a sturdy hold that can be adjusted up or down for fine-tune positioning
- Functions as a hex nut, square washer and flat washer combined

03 Press the pin with pliers

- Locking pin holds Trapnut fastener in the desired position
- Can be removed and reused

04 Tighten to the desired position with pliers

- Can be adjusted up or down for fine-tune positioning
- Sturdy, load-bearing stainless steel construction
- Sized to provide custom fit for either 1 $\frac{5}{8}$ " or 1 $\frac{1}{2}$ " strut systems

The unique scissor action of the Trapnut strut fastener closes at any desired position on the threaded rod. Once closed, precision threads trap the rod for a sturdy hold that can be adjusted up or down for fine-tune positioning. While the versatile Trapnut® strut fastener has a locking pin that holds it in the desired position, it can also be removed and reused.

Unlike a hex nut, there's no need to thread the Trapnut fastener from either end of the rod, saving valuable time on the job. While the Trapnut fastener is a time-saver for new work, it's invaluable for retrofit applications. Rather than disassembling an existing trapeze to run additional conduit above it, simply clamp the Trapnut fastener between the trapeze and beam clamp for a speedy retrofit solution. Ideal for applications where the rod ends aren't accessible.

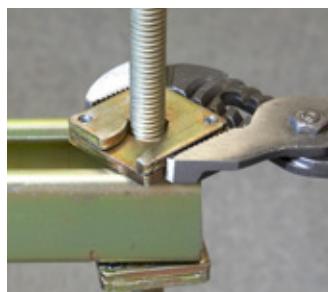

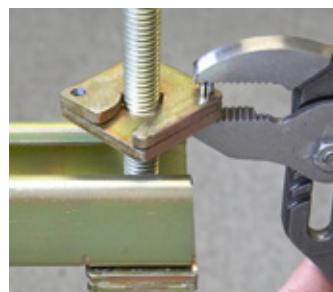

The Trapnut fastener offers sturdy, load-bearing steel construction for a solid installation. In addition, the Trapnut fastener functions as a hex nut, square washer and flat washer all in one, so there are fewer parts to keep track of on the job.

- Takes 30% less time than the traditional method on new work*
- Takes 43% less time than the traditional method on retrofit applications*

* Based on time study conducted by ABB comparing the time to install 15 feet of 2" conduit with typical trapeze assemblies using washers and nuts versus Trapnut fasteners.

Type 316 stainless steel Trapnut fastener

Ocal® installation products

The right tools for the job

ABB Ocal PVC-coated conduit is designed to help prevent corrosion from striking weak points in conduit systems. But any PVC-coated conduit system is only as good as the installation job. The wrong tools can result in incorrectly installed pipes and fittings or damage to PVC coating, creating those weak points where corrosion starts.

After careful research and evaluation, ABB offers you the very best installation tools available for PVC-coated conduit. These tools are ready for use on PVC-coated conduit right out of the box. What that means to the installer, is lower costs – in equipment, in installation time and in time normally spent adapting standard tools for use on PVC-coated conduit.

Hassle-free installation

Count on ABB to provide a hassle-free means for installers to get the right tools for the job in their hands – just another benefit of using Ocal products.

For more information on Ocal installation guidelines, see pages 87-102.

GREENLEE® model 555 electric bender for PVC-coated conduit

Bends 1/2" through 2" PVC-coated conduit

When using this electric bending machine on 1/2" through 2" conduit, the shoes as well as the roller assembly should be of the type designed specifically for use with PVC-coated conduit.

When using conventional shoes, the shoes and each of the rollers in the roller assembly must be machined 60 thousandths. Some manufacturers use slide bars instead of a roller assembly, and these, too, must be machined 60 thousandths.

Be sure to compensate for "spring back," since PVC coating often requires the setting to be off as much as 5°.

Ridgid stationary power threading machine

1224 series

Stationary power threading machines such as the Ridgid model number 1224 have the capacity to thread rigid conduit from $\frac{1}{2}$ " to 4".

—
01 Special jaw insert
for PVC-coated conduit
Ridgid model number
97365 and 26247

—
02 Standard jaw insert

—
03 In hot weather, use
scored shell clamps
to prevent slipping

—
01

—
02

—
03

- The standard jaw inserts for these units are intended to secure uncoated rigid conduit. The teeth of the standard jaw inserts will penetrate the PVC coating, but not bite into the steel. As a result, the standard jaw inserts will grind the PVC coating off the conduit. To prevent this, shell-style clamps or jaw inserts for coated conduit may be used.

- Shell clamps – Range: $\frac{1}{2}$ " to $3\frac{1}{2}$ "**

To properly clamp the conduit, the shell-style clamps described earlier can be used on conduit sizes from $\frac{1}{2}$ " to $3\frac{1}{2}$ ". However, for 4" conduit, there is not enough room in the chuck to accommodate both the 4" conduit and shell clamps.

- Jaw inserts for coated conduit – Range: $\frac{1}{2}$ " to 4"**

The jaw inserts for coated conduit have a wider surface area to effectively grip the PVC coating. Ridgid catalog no. 26247 is the jaw insert for coated conduit used in the Ridgid 1224 threading machine.

There is no need to pencil cut or score the PVC because these threading machines use a roller cutter to remove $\frac{1}{4}$ " of the PVC coating. Cuttings simply fall onto the screen on the lower portion of the machine.

Ridgid 700 portable threader and die heads

For PVC-coated conduit

Handheld

The Ridgid #12R is typically used for smaller size conduit. The ratchet knob indicates forward and reverse. Die heads snap in from both sides and lock in place. (#12R includes ratchet and handle only)

Handheld powered

The Ridgid 700 power drive is a heavy-duty handheld tool typically used for conduit up to 2" in diameter. The 700 power drive, available in both 115 V and 230 V models, is designed to use Ridgid 12R dies. An optional case is available for this tool.

KOPR-SHIELD® joint compound

Protects, lubricates and enhances the conductivity of all electrical connections

Product features

- Meets NEC requirements for protection against corrosion: "Where corrosion protection is necessary and the conduit is threaded in the field, all threads shall be coated with an approved electrically conductive, corrosion-resistant compound."
- Extremely adhesive compound flows smoothly into uneven contours and voids, ensuring easy application and complete, positive protection and lubrication
- Won't settle out, thin, thicken, harden or dry out under the most severe environmental conditions
- Excellent temperature characteristics – can be brushed on at -50° F to 250° F (-45° C to 121° C) and remains intact for short periods even at 1,800° F (982° C)
- Helps ensure low resistance and seals out air and moisture
- Unique, homogenized blend of pure, polished colloidal copper, rust and corrosion inhibitors

KOPR-SHIELD® joint compound

Product code	Container	Size
201-31879	Brush cap can	1½ oz. (0.04 liter)
201-31879-1	Brush cap can	4 oz. (0.12 liter)
CP8-TB	Brush cap can	8 oz. (0.24 liter)
CP16	Brush cap can	1 pint (0.47 liter)
CP128	Can	1 gallon (3.79 liter)

Note: Not recommended for food or beverage processing applications.

Ocal® touch-up compounds

Fast-drying, air-cure patch for Ocal PVC-coated conduit and fittings

Ocal touch-up compounds

Product code	Container	Size	Color
Exterior PVC patch			
SPRAY-G	Spray can	12½ oz. (0.37 liter)	Dark gray
SPRAY-W	Spray can	12½ oz. (0.37 liter)	White
SPRAY-B	Spray can	12½ oz. (0.37 liter)	Light blue
PATCHP-G	Brush cap can	1 pint (0.47 liter)	Dark gray
PATCHP-W	Brush cap can	1 pint (0.47 liter)	White
PATCHP-B	Brush cap can	1 pint (0.47 liter)	Light blue
PATCHG-G	Can	1 gallon (3.79 liter)	Dark gray
PATCHG-W	Can	1 gallon (3.79 liter)	White
PATCHG-B	Can	1 gallon (3.79 liter)	Light blue
Interior urethane patch			
URETHANEPATCH	Brush cap can	1 pint (0.47 liter)	Blue

Ocal® heat-cure patch

A better patching solution for hot weather applications

Even in the best of installations, the PVC jacket on PVC-coated conduit or fittings can be cut, nicked or abraded. To maintain corrosion protection, ABB offers thicker PVC patch to its offering of Ocal touch-up compounds.

Ideal for use in hot weather, Ocal heat-cure patch offers a thicker consistency at high ambient temperatures than standard air-cure patches, helping to ensure better coverage and a more effective patch.

Ocal heat-cure patch makes patching fast and easy.

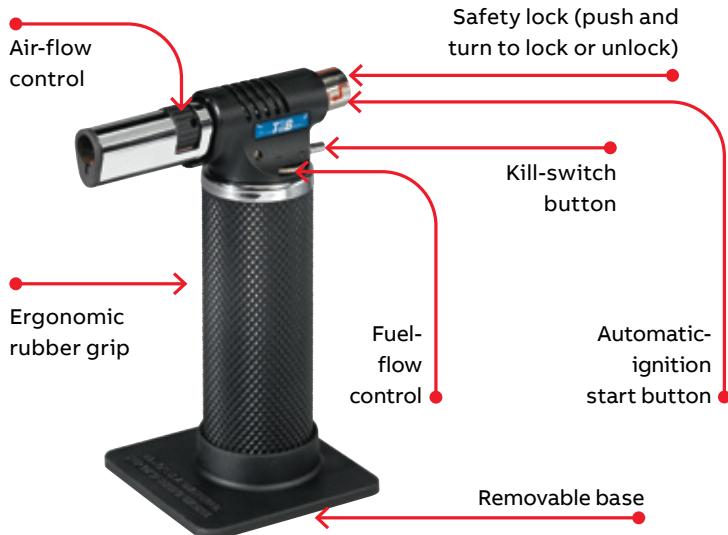

1. Make sure the area to be patched is clean and dry.
2. Squeeze the amount of patch material needed onto the area to be repaired.
3. If necessary, spread and level the patch material with a putty knife.
4. Apply heat with a heat gun or torch, such as the portable heat-shrink torch.
5. Being careful not to overheat (500° F/260° C max.), apply heat for two minutes total, or at least one minute after surface of patch has turned glossy. (The patch material is a glossy liquid that turns flat with initial heat application and then turns glossy again as heating continues.)
6. Allow the patched area to air cool, or use a water quench.

Ocal heat-cure patch

Product code	Color	Size
PATCHT-G	Dark gray	6 oz. (0.18 liter)
PATCHT-W	White	6 oz. (0.18 liter)
PATCHT-B	Light blue	6 oz. (0.18 liter)

Portable heat-shrink torch

Separate controls enable precise adjustment of flame and temperature

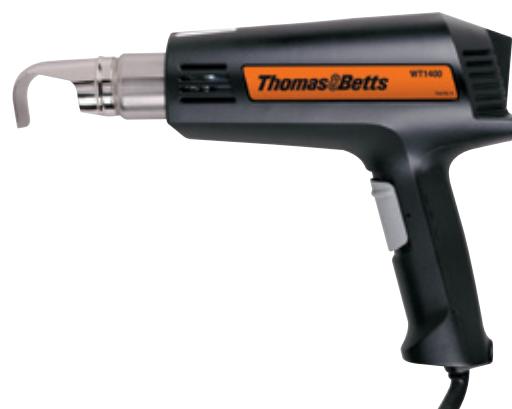

Portable heat-shrink torch

Product features

- 2,500° F (1,371° C) output capacity satisfies virtually any heating, brazing or soldering requirement
- Dual fuel- and air-flow controls enable separate adjustment of temperature and flame precision
- Brass and steel construction provides durability
- Operates on standard butane lighter fluid (not included)
- Operating time (per full fuel tank):
Up to 220 minutes
- Fuel tank capacity:
2.03 fl. oz. / 60.03 ml

Electric heat gun

Product features

- UL listed
- 600° F to 950° F heat range
- Brass and steel construction provides durability
- 120 V AC, 60 Hz

Electric heat gun

Product code	Description	Pkg qty
WT1400	Dual-temp. heat gun 600° F/950° F, 1300 W, 120 V AC, 60 Hz	1

Order multiple is std. pkg.

Ocal® guide specification:

Section 26 05 33 — Underground ducts and raceways for electrical systems:
Conduit systems for use in corrosive environments

Part 1 – General

1.1 Summary

- A. Section Includes: Furnishing, installation and assembly of PVC-coated electrical rigid metal conduit (ERMC) systems and stainless steel fittings.
- B. Related Sections
 - 1. Section 26 05 29 –
Hangers and Supports for Electrical Systems

1.2 References

- A. National Electrical Manufacturers Association (NEMA)
 - 1. NEMA RN 1: Polyvinyl-Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit
- B. National Fire Protection Association (NFPA)
 - 1. NFPA 70: National Electrical Code® (NEC®)
- C. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 239: Standard Practice for Locating the Thinnest Spot in a Zinc (Galvanized) Coating on Iron or Steel Articles

 - 1. Guidelines for Installing Steel Conduit/Tubing

1.3 Submittals

- A. General: Submit in accordance with Section 01 33 00.
- B. Product Data
 - 1. Manufacturer's descriptive literature and product specifications for each product.
 - 2. Manufacturer's installation literature and training guide.
 - 3. Manufacturer's product drawings, when applicable.

1.4 Quality Assurance

- A. Manufacturer Qualifications: Products shall be free of defects in material and workmanship.
- B. Installer Qualifications: Installer shall be trained and certified based on the acceptable manufacturer's listed requirements.

Part 2 – Products

2.1 General

- A. Furnish PVC-coated ERMC of size as indicated. If not indicated, the smallest trade size shall be $\frac{3}{4}$ in. The PVC-coated ERMC system shall include necessary PVC-coated fittings, boxes and covers to form a complete encapsulated system.

2.2 Manufacturers

- A. Acceptable Manufacturers: ABB Corporation; Electrification Products division 860 Ridge Lake Blvd., Memphis, TN 38120. Tel: 901-252-5000. Web: www.tnb.com..
- B. Substitutions: Not permitted.
- C. Requests for substitutions will be considered in accordance with provisions of Section 01 25 00.

1.3 Materials/Components

A. PVC-coated rigid steel conduit

The PVC-coated rigid steel conduit shall be hot-dip galvanized inside and out with hot-dip galvanized threads. The interior galvanizing shall be listed per UL 6. The exterior galvanizing shall be listed per UL 6 as primary corrosion protection. Thread protectors shall be used on the exposed threads of the PVC-coated conduit. PVC-coated ERMC steel conduit shall comply with UL 6, ANSI C80.1 and NEMA RN 1 standards without exception.

The PVC coating, in compliance with NEMA RN 1, shall be nominal 40 mils in thickness continuous over the entire length of the conduit except at the threads and be free of blisters, bubbles or pinholes. PVC shall be UL listed as a primary corrosion protection.

A blue urethane coating shall be uniformly and consistently applied to the interior of conduit. This internal coating shall be a nominal 2 mils thickness. All male threads on elbows and nipples shall be protected by this same application of urethane coating.

Coated couplings shall be used with coated conduit. The thickness of the coating on couplings shall be at least equal to the thickness of the coating on the conduit. Each coated coupling shall have a flexible PVC sleeve which extends from each end of the coupling and which will overlap the PVC coating on the conduit when the coupling has been installed on the conduit.

Technical information

Ocal® guide specification (continued)

The length of the sleeve extension(s) shall be at least equivalent to the nominal conduit size for sizes up through 2 in. For sizes 2–6 in., the length of the sleeve extension(s) shall be at least 2 in. The PVC sleeve shall be a nominal thickness of 40 mils in thickness. The inside diameter of the overlapping sleeve shall be less than the outside diameter of the PVC-coated conduit.

The PVC coating, in compliance with NEMA RN 1, shall be nominal 40 mils in thickness continuous over the entire length of the conduit except at the threads and be free of blisters, bubbles or pinholes. PVC shall be UL listed as a primary corrosion protection.

A blue urethane coating shall be uniformly and consistently applied to the interior of conduit. This internal coating shall be a nominal 2 mils thickness. All male threads on elbows and nipples shall be protected by this same application of urethane coating.

Coated couplings shall be used with coated conduit. The thickness of the coating on couplings shall be at least equal to the thickness of the coating on the conduit. Each coated coupling shall have a flexible PVC sleeve which extends from each end of the coupling and which will overlap the PVC coating on the conduit when the coupling has been installed on the conduit.

B. PVC-coated rigid steel conduit

The PVC-coated ERMC aluminum conduit prior to coating shall be UL listed. The exterior of the conduit shall have a PVC coating of a minimum thickness of nominal 40 mils.

A blue urethane coating shall be uniformly and consistently applied to the interior of conduit. This internal coating shall be a nominal 2 mils thickness. All male threads on elbows and nipples shall be protected by this same application of urethane coating.

Coated couplings shall be used with coated conduit. The thickness of the coating on couplings shall be at least equal to the thickness of the coating on the conduit. Each coated coupling shall have a flexible PVC sleeve which extends from each end of the coupling and which will overlap the PVC coating on the conduit when the coupling has been installed on the conduit. The length of the sleeve extension(s) shall be at least equivalent to the nominal conduit size for sizes

up through 2 in. For sizes 2–6 in., the length of the sleeve extension(s) shall be at least 2 in. The PVC sleeve shall be a nominal thickness of 40 mils in thickness. The inside diameter of the overlapping sleeve shall be less than the outside diameter of the PVC-coated conduit.

C. PVC-coated ordinary location fittings

PVC-coated ferrous and aluminum fittings for general service and corrosive locations must be UL listed. The PVC coating shall be minimum 40 mils in thickness and be free of blisters, bubbles or pinholes. Female threads on fittings shall be protected by application of urethane coating.

All female ends of PVC-coated conduit fittings shall have a flexible PVC sleeve which extends from the female ends of the fitting and which will overlap the PVC coating on the conduit when the fitting has been installed on the conduit. The length of the sleeve extension(s) shall be at least equivalent to the nominal conduit size for sizes up through 2 in. For sizes 2–6 in., the length of the sleeve extension(s) shall be at least 2 in. The PVC sleeve shall be a nominal thickness of 40 mils in thickness. The inside diameter of the overlapping sleeve shall be less than the outside diameter of the PVC-coated conduit.

1. The PVC coating on all form 8 covers shall form a gasket like flange of at least 5/16 in. wide and minimum 40 mils covering the top of the fitting around the opening and the bottom of the cover/matting with the flange of the fitting. A blue urethane coating shall be uniformly and consistently applied to the interior, exterior and threads of all conduit bodies, including but not limited to form 8 and form 7 conduit bodies. This coating shall be a nominal 2 mils thickness. Stainless steel encapsulated screws shall be supplied with all form 7 and form 8 fittings.
2. Rigid hubs shall have a nominal 40 mils PVC coating thickness with a nominal 2 mils of blue urethane on interior and threads. The male threads and locknut shall remain uncoated.
3. Liquidtight fittings shall have an exterior PVC coating of a minimum thickness of nominal 40 mils.

Technical information

Ocal® guide specification (continued)

D. PVC-coated hazardous location fittings

Hazardous location fittings prior to PVC coating must be UL listed. All female ends of PVC-coated conduit fittings shall have a flexible PVC sleeve which extends from the female ends of the fitting and which will overlap the PVC coating on the conduit when the fitting has been installed on the conduit. The length of the sleeve extension(s) shall be at least equivalent to the nominal conduit size for sizes up through 2 in. For sizes 2–6 in., the length of the sleeve extension(s) shall be at least 2 in. The PVC sleeve shall be a nominal thickness of 0 mils in thickness. The inside diameter of the overlapping sleeve shall be less than the outside diameter of the PVC-coated conduit.

E. PVC-coated strut, hangers and clamps

Right-angle beam clamps and U-bolts shall be specially formed and sized to fit snugly the outside diameter of the PVC-coated conduit. Support products such as ferrous strut, beam clamps, pipe straps, clamp back spacers, conduit clamp hangers and all-thread rods shall have a minimum 15-mil PVC coating by the manufacturer of the ERMC conduit and system components.

F. Stainless steel fittings

Stainless steel liquid-tight fittings shall be made of 304-grade stainless steel or better.

G. Stainless steel strut, hangers, etc.

Stainless steel strut, beam clamps, pipe straps, clamp back spacers, conduit clamp hangers and all-thread rods shall be made of 304-grade stainless steel or better.

Part 3 – Execution

3.1 Examination

A. The PVC-coated ERMC and system components have been selected for use in an atmosphere considered to be corrosive for this project. The corrosive atmosphere is considered to be more damaging than merely the presence of moisture. Accordingly, conduit and the corresponding fittings for it must have PVC protection as described under Part 2 – Products. Conduit and fittings that are merely galvanized for this purpose are insufficient.

3.2 Preparation

A. Preparation shall be done in accordance with manufacturer's printed instructions.

3.3 Installation

A. Install in accordance with manufacturer's printed instructions and manufacturer's installation training.

3.4 Quality control

A. General:
Comply with requirements of Section 01 45 13.

3.5 Manufacturer's field services

A. Free on-site installation training course by company representative. This representative must conduct the on-site training course in order to qualify for the installation certificate. The time required for this training is estimated to be two (2) hours.
B. After the on-site training installation, the representative shall then register the installer in his database and provide certification for installation.

End of section

Notes

1. Ocal® PVC-coated conduit and fittings are not recommended for use in areas where they will be exposed to sustained temperatures above 200 degrees Fahrenheit or exposed to fire. Prolonged exposure to heat greater than 200 degrees Fahrenheit or exposure to fire may cause the plastic coatings to release harmful emissions, posing a potential health hazard to persons subjected to such emissions.
2. If subjected to sustained flame or sustained heat above 400 degrees Fahrenheit, PVC will burn. PVC is self-extinguishing at room temperature.

Technical information

Ocal installation certification training: Proper installation procedures for PVC-coated conduit systems

Training description

How do you reduce installation costs; save time and material, reduce the risk of installation damage to PVC-coated conduit systems and help provide end users a high-quality installation of PVC-coated conduit systems designed to deliver years of trouble-free service? Become a Certified Ocal Installer! Attend our hands-on training, demonstrating best practices and installation methods: cutting, threading, bending, assembly, patching and more!

Who benefits from this training?

- Electrical contractors
- Project managers
- Electrical engineers
- End users

Benefits of completing this training

- Successful completion of the Ocal Installation Training will earn you the designation of Certified Ocal Installer, which is valid for two years. This designation will be recorded in the ABB database.
- ABB extends its Ocal limited warranty for defects in materials and workmanship from two (2) years from the date of purchase to five (5) years from the date of purchase when installed by a Certified Ocal Installer.

Learning outcomes

- The proper techniques for installing PVC-coated conduit systems:
 - Clamping
 - Cutting
 - Threading
 - Bending
 - Assembly
- Understanding of the special tools used to install PVC-coated conduit systems and their proper use
- How to avoid damaging the PVC and conduit systems' layers of corrosion protection
- The best ways to help protect the threads of the PVC-coated conduit system for each application
- The proper installation of PVC-coated conduit sleeves and fittings
- When and how to patch the PVC coating

Technical information

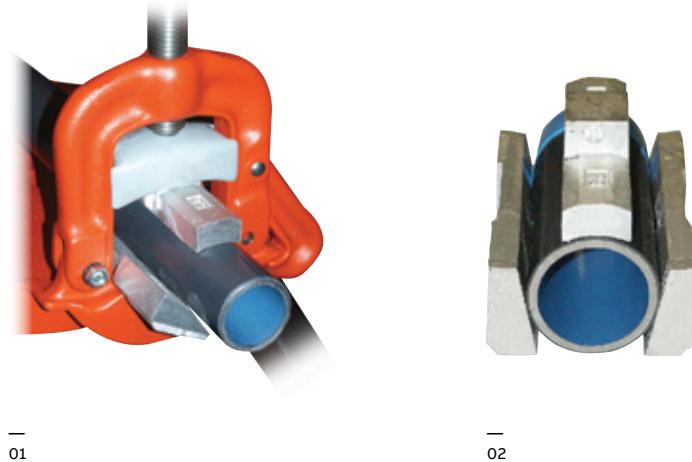

Clamping

- 01 Yoke-style vise
- 02 Ocal jaw vise
adapters (JAWS23)

Clamping

The first step is the correct clamping of the PVC-coated conduit. Use of a yoke-style vise is recommended.

When using a yoke-style vise, you should replace the upper and lower jaw inserts with the specially designed Ocal jaw vise adapters. These adapters provide greater clamping force and will help prevent the pipe from spinning during the threading operation.

—
01

—
02

Product code	Description	(lbs.)	Weight (kg)
JAWS23	Use with RIDGID No. 23 and 40A yoke vises	2.80	1.27

Technical information

Clamping

—
01 Chain-style vise

Use of a chain-style vise may result in the chain and jaw inserts tearing the conduit's PVC coating during threading.

To prevent damage to the PVC coating, protective "shells" may be fabricated from lengths of standard rigid steel conduit that fit over the PVC-coated conduit, preventing the chain from coming into direct contact with the PVC coating. The steps to make the shells are outlined below:

—
01

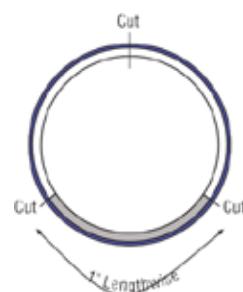

- 1 Use a 6" to 8" length of rigid conduit that is one size larger than the PVC-coated conduit. For example, if the PVC-coated conduit is 1½" trade size, use 2" trade size rigid conduit for the nipples, or shells.

- 2 Remove a 1" piece lengthwise from the cut conduit section.

- 3 Cut the conduit section in half lengthwise, creating two shells.

- 4 Grind and brush the edges smooth.

- 5 Score interior of shells lengthwise with a band saw.

Technical information

Clamping

- 01 Chain-style vise
- 02
Without using protective shells,
the chain will damage
the PVC coating
- 03
Mounting
the shells

To clamp with a chain, place a shell on top of the lower jaws, then rest the conduit on top of the bottom shell. Place the second shell on top of the conduit. Now, you are ready to clamp the chain to secure the conduit.

—
01

—
02

—
03

Operations such as threading and cutting can now be performed without risk of the chain and jaws damaging the PVC coating.

Technical information

Cutting

Band saw cutter

Cutting PVC-coated conduit with a band saw will leave the PVC coating flush with the end of the conduit. When PVC material is left flush at the end of the conduit, the threading process cannot begin because the threader die teeth are unable to bite into the steel.

To prepare the conduct for threading, approximately $\frac{1}{4}$ " of the PVC coating must be removed. Using a knife, whittle in a pencil-sharpening style, cutting $\frac{1}{4}$ " of the coating from the conduit. A wire brush may also be used to remove PVC coating.

A band saw may not cut the conduit at a "perfect" 90° angle (the accuracy of the cut depends on operator skill).

- 01 Band saw
- 02 Removal of PVC required after band saw cutting
- 03 Roller cutter
- 04 Roller cutter in use
- 05 Beveled edge as a result of using roller cutter

01

02

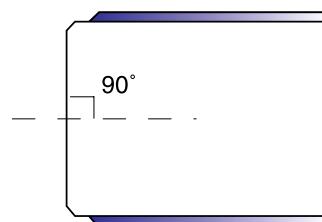

03

Roller-style cutter

Although many personnel in the field prefer a band saw, a roller-style cutter is the recommended tool for cutting Ocal PVC-coated conduit.

A roller-style cutter cuts the edge of the conduit at a bevel and removes $\frac{1}{4}$ " of the coating at the same time, so no additional removal of PVC coating is necessary to prepare for threading. In addition, the roller cutter provides an exact 90° cut in relation to the conduit

04

05

Technical information

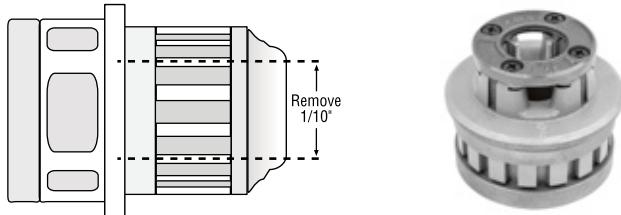

Manual and power threading

Threading

PVC-coated conduit has a larger OD (Outside Diameter) than uncoated conduit. Standard die heads will not clear the additional thickness. Never strip the PVC coating to use a standard die head. Doing so will result in exposed steel, which will compromise the protection of the conduit system. Both hand-held and power threading devices require special die heads suitable for PVC-coated conduit. These die heads are available from ABB as well as the equipment manufacturer.

If special die heads are not available, standard die heads can be modified for use on PVC-coated conduit:

- 1** Remove the cover plate and the four die teeth.
- 2** Have a machinist remove 100 thousandths of an inch (1/10") from the throat and collar diameter of the die head.
- 3** Reinstall the dies and cover.

NOTE: The die teeth are cutting tapered threads and will become clogged with PVC and metal shavings, which can damage the threads. To avoid this, score the PVC coating before threading. Use a conduit thread cap to determine the length to score from the conduit end. Then, use a knife to score the conduit lengthwise from the point where the threads will end to where they begin. This will allow the PVC and metal shavings to fall into the throat of the die head.

Technical information

Manual and power threading

- 01 Ratchet threader
- 02 Hand-held powered threader
- 03 Reamer
- 04 Ocal urethane compound (Ocal-Blue patch)
- 05 Kopr-Shield® compound

Hand-held ratchet threading

The hand-held ratchet threader is typically used to thread smaller size conduit. The ratchet knob indicates forward and reverse. Die heads snap in from both sides and lock in place.

— 01

— 02

— 03

Hand-held powered threading

Hand-held power threaders are typically used to thread conduits up to 2" in diameter.

Once threading is complete, ream the conduit with approved reamers. Spiral and straight-style reamers are both acceptable.

The threads must be dressed per NEC (article 300.6 [a]): "Where unusually corrosive elements require additional protection, it is recommended that threads be zinc coated with a hot dipped process or equivalent."

Clean the threads with a quality degreaser, and coat them with either Ocal urethane (Ocal-Blue® patch) or Kopr-Shield® compound.

— 04

— 05

Technical information

Manual and power threading

- 01 Geared threader
- 02 Stationary power threader

Geared threading

Geared threaders will thread 2½" through 6" PVC-coated conduit; however, they are primarily used for 5" and 6" conduit. Since the geared threaders use an open-style die head design, scoring is not required to prepare the conduit for threading.

The geared threader requires a clamp screw to secure the conduit. The clamp screw will penetrate the PVC coating. Make sure the clamp screw is tight to prevent it from slipping around the conduit, which could tear the PVC coating. After threading, be sure to touch up the penetrated area with Ocal exterior patching compound. Ream the conduit and dress the threads as previously described.

— 01

— 02

Stationary power threading

Make sure the machine is set up for NPT threading. All machines can cut straight threads; however, not all machines can cut tapered threads. Always make sure the thread cutting oil is clean and that you are using the type or grade recommended by the manufacturer. The preferred machines feature a hand wheel to tighten three jaws to the conduit.

Some stationary power threading machines have the capacity to only thread rigid conduit from 1/2" to 2".

The standard jaw inserts for these units are intended to secure uncoated rigid conduit and may damage the coating of PVC-coated conduit. To prevent this, shells or special jaw inserts for coated conduit may be used.

- Shells — Range: ½" to 1½"

To properly clamp the conduit, the shells described previously can be used with conduit sizes from ½" to 1½". However, for 2" conduit, the chuck lacks sufficient space to accommodate both the conduit and shells.
- Special Jaw inserts for coated conduit — Range: ½" to 2". Special Jaw inserts for coated conduit have teeth that penetrate the PVC coating and bite into the conduit itself. They leave slits in the PVC coating that require touch-up with Ocal exterior patching compound after threading.

Most stationary threading machines use a roller-style cutter and will remove ¼" of the PVC coating, eliminating the need to pencil cut before threading. In addition, these machines use open-style die heads, making it unnecessary to score the PVC coating. The PVC cuttings and steel shavings will freely fall out of the die head.

Technical information

Manual and power threading

Stationary power threading (continued)

Larger stationary power threading machines have the capacity to thread rigid conduit from $\frac{1}{2}$ " to 4".

The standard jaw inserts for these machines are intended to secure uncoated rigid conduit and may damage the coating of PVC-coated conduit. To prevent this, shells or special jaw inserts for coated conduit may be used.

- Shells – Range: $\frac{1}{2}$ " to $3\frac{1}{2}$ "
To properly clamp the conduit, the shells described previously can be used on conduit sizes from $\frac{1}{2}$ " to $3\frac{1}{2}$ ". However, for 4" conduit, the chuck lacks sufficient space to accommodate both the conduit and shells.
- Special jaw inserts for coated conduit – Range: $\frac{1}{2}$ " to 4"
Jaw inserts for coated conduit have a wider surface area to effectively grip the PVC coating.

These machines use a roller cutter and will remove $\frac{1}{4}$ " of the PVC coating, eliminating the need for pencil cutting or scoring of the PVC before threading. The cuttings will fall onto the screen on the lower portion of the machine.

Special jaw insert for PVC-coated conduit — used with threaders that only thread up to 2"

Special jaw insert for PVC-coated conduit — used with larger stationary power threaders

In hot weather, use scored shells to prevent slipping

Technical information

Manual and powered bending

- 01 Manual bender
- 02 Electric bender

Hand bending

A standard hand bender can be used for saddles, offsets and conventional bending. PVC-coated conduit fits perfectly inside a hand bending shoe. No upsizing or machining of a standard hand bender is required for Ocal PVC-coated conduit.

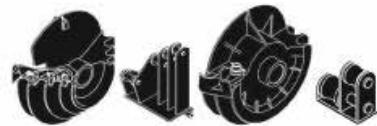

Note: Never use any type of lubricant on conduit bending shoes. Use rubbing alcohol to clean the shoe prior to bending.

—
01

Power bending

Most electric benders will bend $\frac{1}{2}$ " to 2" conduit. Some manufacturers offer shoes and roller assemblies ready for use with PVC-coated conduit.

Alternatively, conventional shoes and rollers, may be used, but they must machined to remove 60 thousandths of an inch (6/100"). Some manufacturers use slide bars instead of a roller assembly and these must also be machined 60 thousandths of an inch. You will need to compensate for "spring back" since PVC coating often requires the setting to be adjusted as much as 5°.

—
02

Technical information

Manual and powered bending

—
01 Hydraulic bending tool

—
02 Shoe for hydraulic bending tool

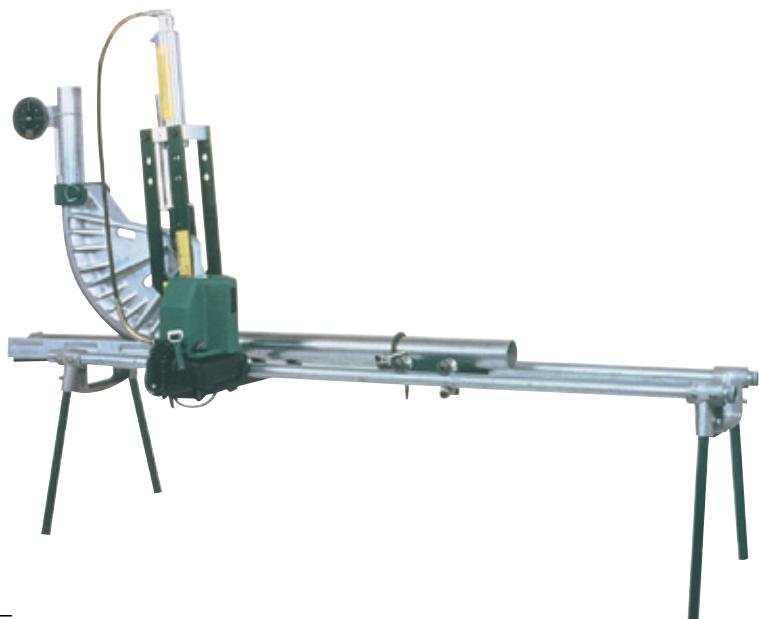

Hydraulic bending

Hydraulic is the preferred style of bending for larger sizes of conduit, 2½" and above. The shoe assembly should be of the design for PVC-coated conduit. The roller wheel and/or slide bar do not need to be machined to accommodate PVC-coated conduit.

Some hydraulic benders have trouble with larger sizes of PVC-coated conduit slipping vertically out of the shoe during the bending process, which can cause kinking.

Note:

- Sequential bends can be manufactured by ABB upon request.
- 5" and 6" conduit must be bent at the factory.

—
01

—
02

Technical information

Repairing

Ocal® PVC-coated conduit should always be damage-free. Any compromise to the PVC coating can lead to corrosion, which places personnel and the electrical system at risk. ABB offers two Ocal PVC patching compounds to repair minor damage of PVC coating. To repair areas larger than 1 inch in width, use a quality vinyl or PVC tape.

Air-cure patching

To prepare for patching, use a wire brush to remove any rough or loose edges surrounding the damaged area.

Next, using the integrated cap brush, apply a generous amount of Ocal liquid air-cure patching compound to the area. The compound should overlap the surrounding PVC since the compound only adheres to PVC.

Make sure that the patched area is level with the original factory coating, which is a nominal 0.04". This may require two or more applications. Allow each coat of the compound to cure up to 24 hours.

Heat-cure patching

Ocal heat-cure patch compound offers a thicker consistency at higher ambient temperatures than standard air-cure compounds, helping provide better coverage and a more effective patch in warm weather applications.

Using a standard chip brush, apply heat-cure patching compound in the same manner as air-cure patching compound.

The compound should overlap the surrounding PVC since the compound only adheres to PVC.

To dry, use a common heat-shrink gun. The compound should cure in approximately 2 minutes, resulting in a dull finish. As mentioned previously, be sure to build the patched area to the level of original factory coating with as many coated layers as necessary, allowing each coat to dry thoroughly.

Technical information

Repairing

PVC tape

If patching is not an option, you can repair a large area of exposed metal greater than 1" wide by using vinyl or PVC tape. This type of repair should be used as a temporary solution until the compromised section can be replaced.

- 1 First, remove any loose PVC material and smooth rough PVC edges surrounding the damaged area.
- 2 Wrap the conduit with the tape to at least 0.04" thickness, overlapping one-half the width of the tape as well as the surrounding PVC coating.
- 3 Completely cover the taped area with Ocal PVC spray to assist with sealing the taped area as well as aesthetically color matching the factory PVC coating.

3

Technical information

Installation and special care

—
01 T&B hub

—
02 ST 1/2

—
03 Reducing coupling

—
04 Stainless steel
Superstrut® channel

As previously mentioned, “no exposed metal shall be allowed” in PVC-coated conduit systems.

When a PVC-coated conduit terminates into an enclosure, a PVC-coated hub is required for exit out of the enclosure with the PVC sleeve covering all exposed threads.

—
01

When changing from one size PVC-coated conduit to another, an REC-style reducing coupling is preferred over a standard RE reducing bushing.

—
03

Conventional flexible conduits and fittings may not be used in PVC-coated conduit system. The flex as well as the fittings must be PVC-coated.

Stainless steel strut is recommended over PVC-coated strut.

—
02

—
04

Technical information

Installation and special care

When working with PVC-coated conduit, special wrenches must be used to protect the PVC coating. Pipe wrenches with extra-fine teeth, strap-type wrenches and slip-joint pliers with special jaws should be used to help avoid damage.

Special care — sleeves

Sleeves are provided on PVC-coated conduit couplings and fittings to help ensure a continuous coating. Sleeves shall not be cut off or split. The required lengths for sleeves is set forth in NEMA RN-1 Section 3.5.

In cases where two sleeves meet, each sleeve is permitted to be trimmed equally to allow the two sleeves to fit flush.

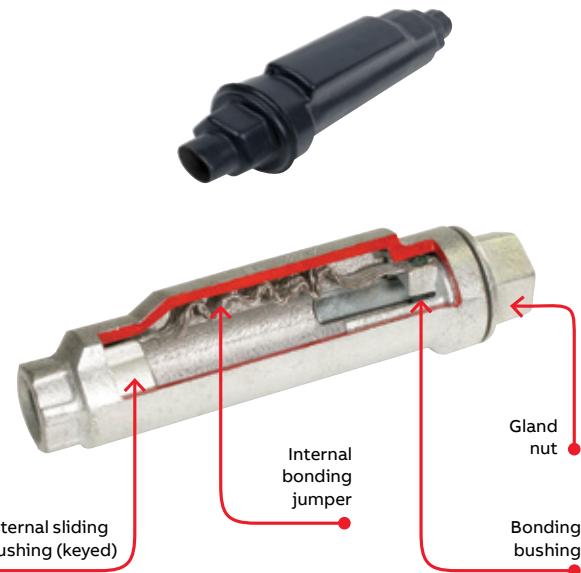

To make installation easier, silicon sprays may be used on the inside diameter of the sleeves.

Special care — grounding and bonding

When expansion joints are used in PVC-coated conduit systems, use of one with an internal bonding jumper is recommended.

The use of an expansion joint without an internal bonding jumper requires removing portions of the PVC coating where the external jumper attaches, followed by repair patching of the exposed metal.

Ocal liquid-tight connectors with UL listed grounding ring meet the requirement of UL 467 for grounding and bonding. These grounding rings are made from naval brass for superior corrosion resistance.

Special care — assembly

Threadless fittings shall NOT be used with PVC-coated conduit.

Since the threads are not visible during installation, take extra care to ensure that threads are fully engaged and wrench tight.

Strap wrench

A strap wrench can also be used to tighten PVC-coated conduit.

Be sure to use a strap wrench with a non-absorbent strap, designated by its yellow color.

Avoid using a conventional strap wrench with a white strap, which will absorb oil over time and begin to slip when used with PVC-coated conduit.

Product code	Handle length in. mm	Strap length in. mm	Strap width in. mm	Pipe capacity		Weight lbs. kg
				in. mm	in. mm	
31355	11.75	17.00	1.75	2.00	3.50	1.75
	298.45	431.80	44.45	50.80	88.90	.79

	457.20	742.95	44.45	127.00	139.70	1.25

J-wrench

Conventional slip-joint pliers will cause severe damage to PVC coating.

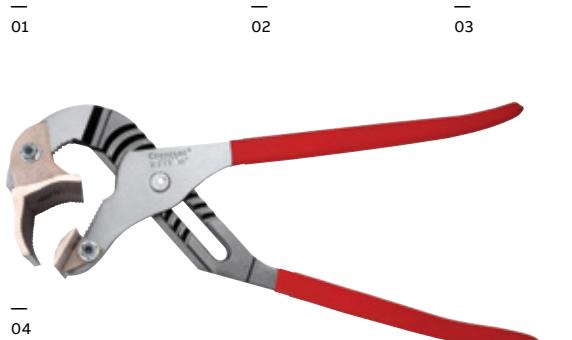

ABB offers J-wrenches that are of a slip-joint design with extra wide jaws to protect the Ocal PVC coating while gripping.

Ocal J-wrench

Removable aluminum jaws for PVC-coated conduit.

Use with our pliers, or purchase the jaws only and adapt to your pliers.

Product code	Description	Pipe capacity
J442	12" J-wrench with jaws	½" to 1¼"
J460	16" J-wrench with jaws	1½" to 2½"
J42	12" jaw set only	½" to 1¼"
J60	16" jaw set only	1½" to 2½"

Technical information

NEMA standards publication no. RN 1–2005

Section 3 – External coatings

3.1 Thickness

The thickness of polyvinyl chloride (PVC) coatings shall be a nominal 0.040 in. (1.02 mm). The tolerance on the coating thickness shall be +0.010 in. (0.25 mm) or -0.005 in. (0.13 mm).

3.2 Coating material

The PVC coating shall have the properties specified in Table 3.1.

Properties of PVC coatings – Table 3.1

Property	Minimum Requirement	ASTM Test Method
Hardness:		
Shore A	75	D 2240
Shore D	25	D 2240
Tensile Strength	2,000 psi	D 638
Elongation	200%	D 638
Dielectric Strength	325 volts per mil	D 149
Brittleness Temperature	5° F	D 1790

3.3 Application of coating

3.3.1 Cleaning

The exterior surface that is to receive the coating shall be free of grease, oil, dirt and other extraneous matter. The surface shall be cleaned in such a manner that the galvanized surface of the conduit is not harmed or eroded.

3.3.2 Priming

The cleaned exterior surface shall be primed with an adhesive suitable for use with the PVC coating material to be applied.

3.3.3 Coating

The PVC material shall be applied in powder, plastisol or pellet form by a manufacturing method which will produce a finished product conforming to these standards.

3.4 Elbows

Coated elbows shall be used with coated conduit. The thickness of the coating on elbows shall be in accordance with Section 3.1.

3.5 Couplings

Coated couplings shall be used with coated conduit. The thickness of the coating on couplings shall be at least equal to the thickness of the coating on the conduit.

Each coated coupling shall have a flexible PVC sleeve which extends from each end of the coupling and which will overlap the PVC coating on the conduit when the coupling has been installed on the conduit.

The length of the sleeve extension(s) shall be at least equivalent to the nominal conduit size for sizes up through NPS 2 (53). For sizes NPS 2½ (63) through NPS 6 (155), the length of the sleeve extension(s) shall be at least 2 in. (50.8 mm).

The PVC sleeve shall be a nominal thickness of 0.040 in (1.02 mm). The inside diameter (I.D.) of the overlapping sleeve shall be less than the outside diameter (O.D.) of the PVC-coated conduit.

3.6 Workmanship and appearance

The PVC coating shall be free of blisters, bubbles and pinholes.

The PVC coating shall be continuous over the entire length of the conduit except at the threads and shall be holiday-free at the time of manufacture.

A holiday is herein defined as an electrical discontinuity of less than 80,000 ohms equivalent resistance sensed with a cellulose sponge wet with a suitable electrolyte and measured with an appropriate low voltage direct current instrument. A suitable electrolyte is a solution containing tap water, 3.0% salt (sodium chloride) and 0.5% liquid detergent.

The inside of the PVE-coated conduit, couplings and elbows shall be free of the PVC coating material.

All sleeve extensions shall be square cut.

3.7 Performance requirements

Typical physical requirements for PVC-coated conduit are given in Table 3.2.

Typical physical properties of PVC-coated rigid conduit and IMC – Table 3.2

Property	Requirement*	Test Method
Abrasion Resistance	200 hours, no failure	ASTM G6
Bendability, Radius	9 in. (228.6mm)	ASTM G10
Elongation		
Artificial Weathering	Minimum 1,000 hours, no adverse effect	ASTM G153

* The above requirements are based on testing a .040 in. (1.02mm) PVC coating applied over NPS ¾ inch galvanized rigid steel conduit. See Section 1 for information on the ASTM test methods.

3.8 Adhesion

The adhesion of the PVC coating to the conduit shall be greater than the strength of the coating itself. This shall be determined by making two circumferential cuts, above ½ in. (12.7 mm) apart, through the plastic to the substrate. A third cut shall be made perpendicular to and crossing the circumferential cuts. The edge of the plastic shall be carefully lifted with a knife to form a plastic tab. This tab shall be pulled perpendicular to the conduit with a pair of pliers. The plastic tab shall tear rather than any additional coating film separating from the substrate.
