

Nexus[®]Pro the intelligent emergency lighting management system.

Be prepared for an emergency.

Emergency lighting installations must be monitored and tested regularly to ensure they can save the lives of building occupants in the event an emergency occurs.

Through intelligent emergency lighting, ABB makes building safety more accessible than ever.

To assure the safety of public facilities, code and regulation compliance ensures the functionality of emergency lighting, so devices automatically switch on during a power failure.

This is implemented by International and North American organizations such as the National Fire Protection Association (NFPA) and International Code Council (ICC) which release editions of their code that govern public health and safety.

Nexus[®]Pro

Solution and benefits

Nexus[®]Pro is designed to enable building owners and managers to easily maintain and test emergency lighting, without the need to visually verify performance or disrupt the power supply.

With digital solutions, building owners can now have peace of mind knowing their buildings are safer than ever. All operations can be managed remotely, giving building owners and managers complete control wherever they are, whenever they need it most, while preventing any human error in the process.

Cost-effective

- Reduce labor costs for maintaining emergency lighting
- Saving on cost and labor on manual collection and recording of emergency lighting data
- 200 emergency lighting units on one gateway
- Reduce monitoring costs by simply receiving notification once there is defective device

User-friendly

- Monitor remotely anywhere at anytime
- Fast and easy testing with a smart device
- Interactive 2D floor plan layout showcasing emergency lighting positioning
- Software updates automatically applied
- Easily go from one building to many with our scalable system

Enhanced safety and protection

- Comply with Building and Life Safety Codes and other North American regulations
- Real-time self-monitoring and maintenance alerts if units stop functioning
- Holds all emergency lighting testing and maintenance data in a secure ABB cloud
- Ownership of maintenance data input, quick testing and device monthly and annual device scheduling

Improve installation efficiency

- Quick and flexible commissioning
- Ease of use due to app configuration
- Get diagnostics and part number recommendations during failures

Set up

Easily install and add new fixtures through your mobile device

Maintain

Defective devices are automatically detected and reported on your interface in addition to push notifications

Test

Run test instantly or program them to ensure that all your devices are working properly

Share

Easily share the results of tests with team members, maintenance and technical staff

Making your building safer than ever.
