energy efficiency.

Power and productivity
for a better world™

Water and wastewater utilities are facing many challenges from managing leakage and pressure, optimizing pump performance, improving potable water quality, reducing energy consumption and CO₂ emissions to lowering maintenance costs. ABB's drives, motors and PLCs are designed to help motor-driven applications such as pumps, fans, compressors and conveyors, tackle these, and other, challenges. To discover how to improve your utility's energy efficiency and productivity, visit www.abb.com/water
