Current life cycle status
The mentioned product sub-type of ACS6000c drive is available as a replacement product for older generation of ACS6000c drives. It is in the Classic phase according to the ABB life cycle model outlined above.

Life cycle plan
The ABB life cycle management model is designed to manage an orderly transition to new replacement products or to choose from various lifetime extending services. At the same time the model ensures access to continuing support for our customers.

It is planned to keep the mentioned product sub-type – which is available only as replacement drive – in the Classic phase for approximately 10 years once production of replacement drives has stopped. ABB will inform adequately once the production of replacement drives has stopped.

Recommended actions
Besides the regular maintenance no actions are required. Full range of life cycle services and support are available during the Classic phase.

Further information
For more information on drives life cycle management and available services contact your local ABB organization or at www.abb.com/drives.

Product availability
The mentioned sub-type is available for sale as replacement product in case of plant extension or renewal of installed base.
