Aluzink® is a registered trademark.

Design, data and dimensions may be subject to change without prior notice.

Introduction

MNS Select is suitable for enclosing not only simple distribution equipment, but also sophisticated electronic, relay and control systems. The construction principle is very flexible and allows you to obtain many different variants. MNS Select will grow to meet your demands.

A great variety of combinations

The external dimensions of the cabinet can be selected in a variety of height, width and depth combinations, which makes it easy to find the appropriate cabinet size for every application.

The doors open to 180° and are available for both front and rear mounting. Double doors are available for cabinet width 800 mm and more.

MNS Select can be given nine different mounting planes. The open, bolted design simplifies the assembly of equipment in the cabinet from all directions.

Short delivery time

It is easy for the user to rapidly design a truly customised MNS Select cabinet with the help of the Windows-based PC program, ProSelect .

The cabinet is supplied as a complete unit on a short delivery time.

Environmentally friendly

The MNS Select cabinet has been developed to fulfil the environmental requirements of today and tomorrow. It is built from Aluzink® and zinc-coated sheet steel and designed to require the minimum of materials, which also means low weight. The bolted assembly system facilitates recycling.

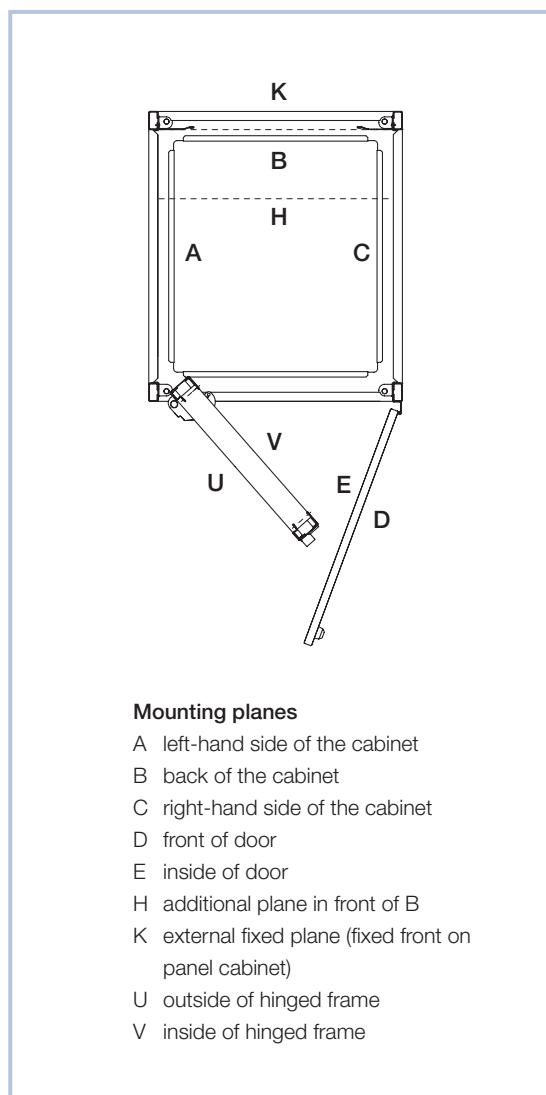

Environmental adaption

MNS Select is designed and fitted for indoor use in a dry environment or at reasonable humidity and air pollution levels. The cabinets can be fitted with heating elements to prevent condensation.

EMC adaption

Electrical equipment and systems play an important part in today's society. Electronics, power- and communication network, electrified railways and data networks are just a few examples. The electromagnetic energy can appear as electromagnetic fields, overvoltages and currents in the shape of transients and noise at different frequencies.

EMC (Electro Magnetic Compatibility) implies that two or more systems can work on the same premises without disturbing each other or themselves by generating electromagnetic waves. MNS Select is designed to provide effective screening against most types of electromagnetic waves.

Mounting planes

- A left-hand side of the cabinet
- B back of the cabinet
- C right-hand side of the cabinet
- D front of door
- E inside of door
- H additional plane in front of B
- K external fixed plane (fixed front on panel cabinet)
- U outside of hinged frame
- V inside of hinged frame

Standards

MNS Select cabinets are tested according to IEC standard publication EN 62208 Enclosures for electronic equipment, Mechanical dimensions in 19" according to IEC 60297.

Underwriters Laboratories Inc. (UL) is an American safety testing and certification organization for both industrial and consumer products.

MNS Select is tested according to the UL-standard Industrial Control Panel (UL508 typ 1). Manufacturing tests performed by independent testing institutes guarantee accomplishment of the standard all over the world.

Degrees of protection

MNS Select cabinets are available with the following degrees of protection as per IEC 529: IP21, IP41, IP43, IP54.

Definition of degrees of protection under IEC 529, IPXY:	
X = 2	Protected against solid objects greater than 12 mm
X = 4	Protected against solid objects greater than 1.0 mm
X = 5	Dust-protected
Y = 1	Protected against dripping water
Y = 3	Protected against spraying water
Y = 4	Protected against splashing water

Material

The basic cabinet frame components are made of 1.5–2 mm corrosion-resistant sheet steel with a 20 µm Aluzink® coating. Other parts with a thickness of over 2 mm are made of zinc-coated sheet steel.

Surface treatment

Only externally visible surfaces, i.e. doors and end panels, are powderpainted. Rear plates can be painted on request.

Standard colour on painted surfaces

RAL 7035 structure, light grey. The base is painted in RAL 7043, dark grey. Other colours on request.

EMC

Dampning measurement according to test arrangement EN 55011 has been performed.

Vibrations

Resonance test has been performed according to IEC 68-2-6 Test Fc:

Frequency range:	5–100 Hz
Amplitude 5–13 Hz:	1 mm
Acceleration 13–100 Hz:	0.7 g

Earthquake protection

MNS Select is tested to withstand seismic shocks according to IEEE 693 draft 5.

Under standard conditions the cabinets can sustain a maximum ground acceleration (ZPA) = 0.5 g.

By applying distance tubs in the bottom corner fittings the cabinets are capable of withstanding (ZPA) = 0.7 g.

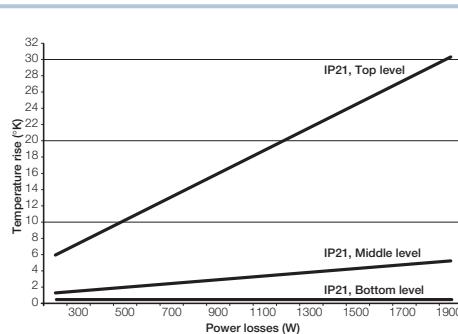

Heat exchanger

MNS Select can be equipped with an air-air heat exchanger. Other variants available on request.

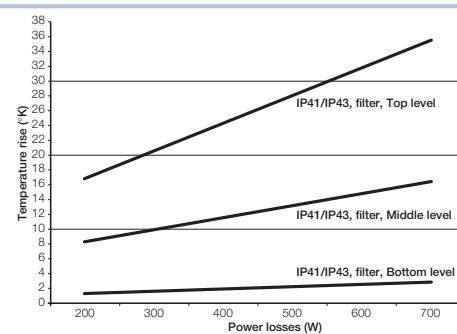

Power losses, guidelines

The temperature rises in a cabinet due to the power losses from the equipment housed in it. It also depends on the cabinet's degree of protection (air-tightness). Self-ventilated cooling is also highly dependent on the type of equipment involved and where it is located in the cabinet.

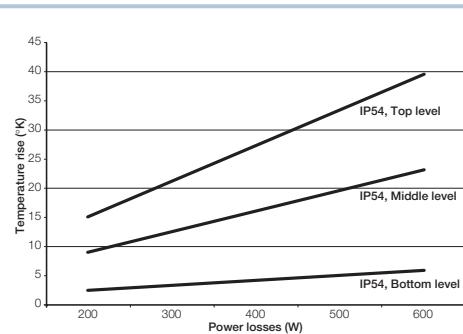

Equipment placed to ensure free air circulation around a heat source can be expected to emit more heat for the same increase in temperature than equipment which is not so well situated. Expected power losses at certain permissible temperature rises can also only be given as guidelines as shown below. There are three measured levels in the cabinet, at the top, on the bottom and in the middle. The heat sources were placed evenly inside the cabinet.

Temperature rise, MNS Select IP21

Temperature rise, MNS Select IP41/IP43 with filter

Temperature rise, MNS Select IP54

ProSelect

ProSelect

ProSelect is a PC-based project planning and quotation tool for MNS Select.

The principle is that you enter suitable cabinet size and functional units. The proposals can then be accepted or changed. When the complete cabinet proposal is considered satisfactory, all the relevant data can be printed on paper.

Input

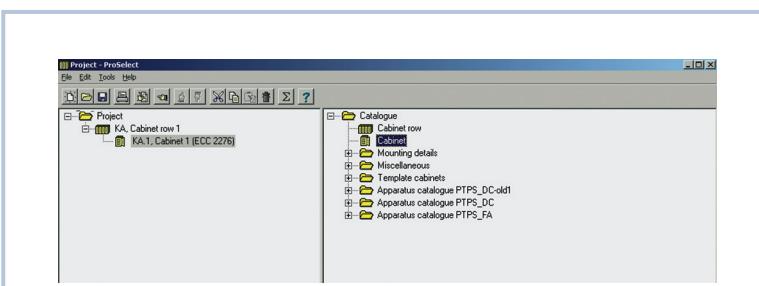

The input consists of general cabinet data, e.g. size, mounting planes, degree of protection and mounting parts e.g. frame, mounting and cover plates, terminal blocks etc.

Easy to change

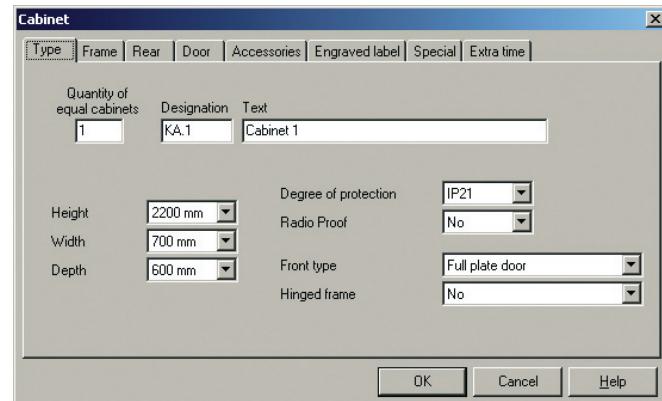

The cabinet selected in ProSelect can be simply changed, e.g. frames and mounting plates can be moved in order to get optimum utilization of the cabinet space.

Simplifies in many ways

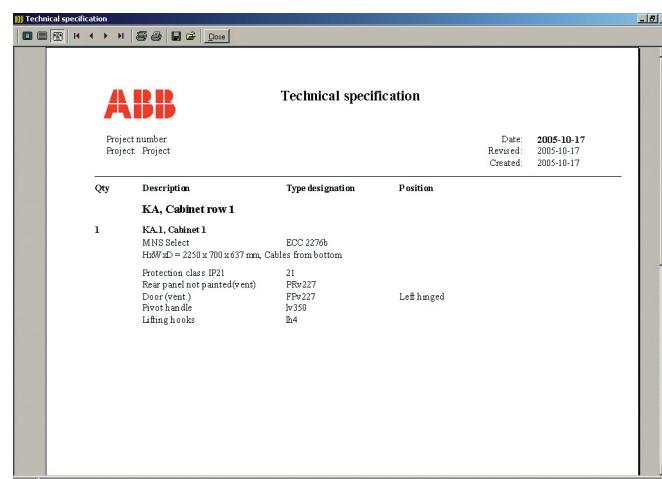

ProSelect is used through the whole process, from tendering to production. The system is also a very useful aid for consultants, industries and utilities during preplanning to find out space requirements etc..

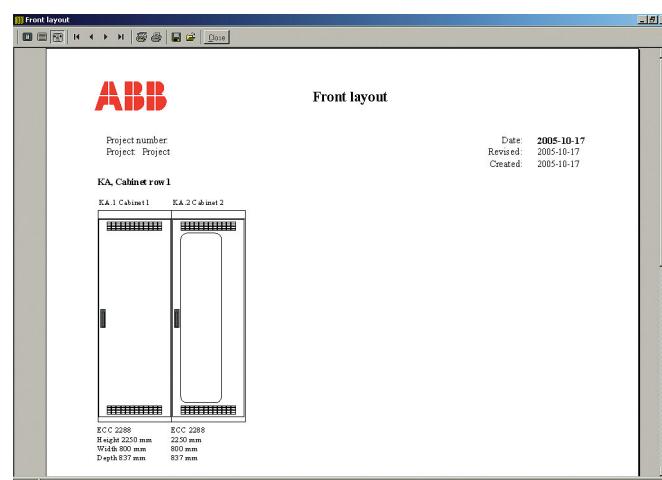

Cabinet selection.

Design selection.

Copy on technical specification.

Cabinet layout.

Design

Cabinet frame

The cabinet frame consists of four pillars, eight corner fittings, a roof plate, a bottom plate and a holder for the legend plate.

The pillars have mounting holes at each 25 mm.

Roof and bottom plates are available with or without holes (for cable entrance). For cable entrance cover plates and EMC cover plates are available.

Thanks to the open design the inside of the cabinet are easily accessible.

Doors

The cabinets are available with different types of doors, left- and right-hand hinged, with or without glass. The opening angle is 180°.

The door locks are of spagnolet design and can be opened and locked by means of a handle. As an option the doors can be provided with keylock, padlock or DIN-handle.

Tightness and ventilation depends on the cabinets degree of protection and environmental adaption.

Rear panel

The rear panel is unpainted in standard design but can be painted as an option.

IP21 has ventilation openings at the top and bottom.

IP41 has ventilation openings with mesh.

IP43 has ventilation openings with louver and mesh.

IP54 has no ventilation openings.

Hinged frame

The cabinets can be provided with hinged frame (not applicable to 600 mm wide cabinets). The opening angle is 180°. An opening stop with lock in the end position can be fitted on request. The opening angle is thereby limited to 135°.

The frame is designed to carry 150 kg load evenly mounted with center of gravity at a maximum of 150 mm from the front mounting plane (plane U). For "earthquake-proof" cabinets maximum load is 100 kg. The frame has two mounting planes with 19" dimension standard: one plane for equipment mounted from outside and another plane for equipment mounted from inside of the frame.

On request the frame can be provided with vertical cable ducts on left- and right-hand side. The frame can be moved sideways and/or in depth.

End panels

The outer sides (left- and right-hand) in a row of cabinets and of one single cabinet shall be provided with end panels available on request.

Partition walls

Partition walls can be provided between cabinets in a row. For EMC design screen walls are used.

Rear mounting plane

The rear mounting plane consists of two vertical assembly brackets according to 19" or 24" dimension standard or a mounting plate. The mounting plate can be placed centered or displaced to one side of the cabinet. On delivery the rear mounting plate is placed 25 mm in front of the rear panel but can be repositioned in depth in steps of 25 mm.

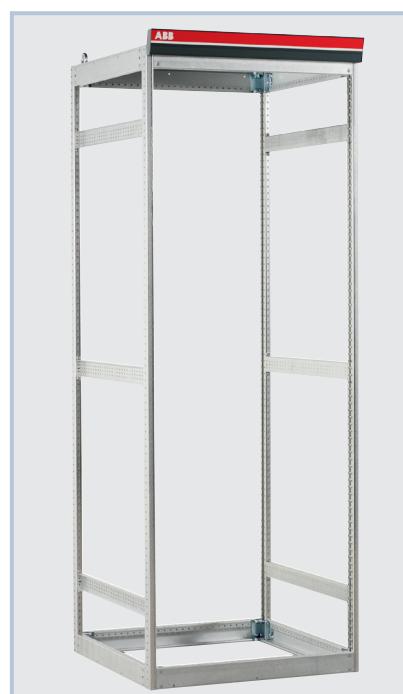

The cabinets can be provided with a vertical cable duct and/or a vertical earthing bar on the rear mounting plane.

Mounting bars are an alternative to mounting plate. These can also be repositioned in depth in steps of 25 mm.

Horizontal earthing bar

On request a horizontal earthing bar can be mounted in the cabinet. Joints for connection between cabinets are included.

The main earthing bar has the dimensions 30 x 5 mm and is available with or without connection clamps.

Cabinet selection

A single cabinet or a row of cabinets can be ordered. All selection alternatives from 1 – 6 must be taken into consideration for all cabinets to be ordered. The cabinets are delivered as assembled units.

Example: Cabinet code ECC2086 implies height 2000, width 800 and depth 600.

1 Select cabinet size from the table below

Note the code.
Ordering example, see page 9.

	Height mm									
	1900	2000			2100	2200				
Width mm										
Depth mm	800	600	700	800	800	600	700	800	900	1000
400		ECC2064	ECC2074	ECC2084					ECC2294	
475	ECC1985				ECC2185					
600		ECC2066	ECC2076	ECC2086		ECC2266	ECC2276	ECC2286		ECC22106
800			ECC2078	ECC2088		ECC2268	ECC2278	ECC2288		

2 Select covered or open bottom

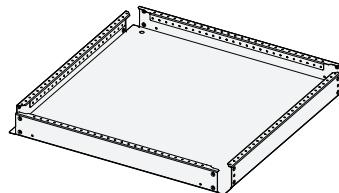

Note the code.
Ordering example, see page 9.

2a Covered bottom

The cabinet bottom is covered with a plate

This alternative to be selected when no cables come from below.

Continue at point 4.

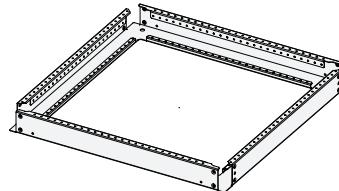

Specify code: BC

2b Open bottom

The cabinet bottom consists of a plate with opening for cables

This alternative to be selected when cables come from below. To be completed with cover plates according to point 3

Specify code: BCc

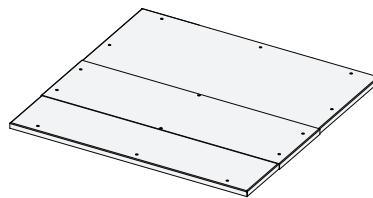

3 Select cover plates for bottom

Note the code.
Ordering example, see page 9.

3a Cover plates

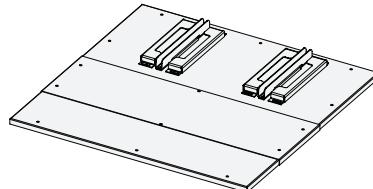

The plates can easily be dismounted for making of holes.

2 or 3 cover plates depending on cabinet size.
Placing of cover plates, see page 24.

Specify code: CP

3b Cover plates with EMC inlet

Specify code: HFCP

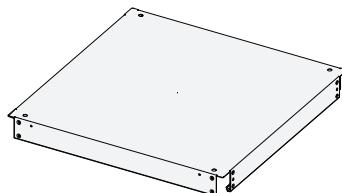

4 Select type of roof

Note the code.
Ordering example, see below

4a Completely covered roof

The roof consists of a fixed entire plate.

This alternative to be selected when no cables come from above.

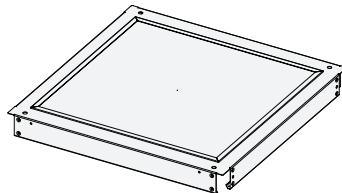

Specify code: **TC**

4b Roof with cover plate

The plate can easily be dismounted for making of holes.

This alternative to be selected when cables come from above or if the roof is ventilated.

Specify code: **TCc**

5 Select degree of protection

Note degree of protection
Ordering example, see below

Touch protected Protected against solid objects ≥ 12 mm Drop protected Protected against dripping water	Touch safe Protected against solid objects ≥ 1.0 mm Drop protected Protected against dripping water	Touch protected Protected against solid objects ≥ 1.0 mm Spray protected Protected against spraying water	Dust protected Protected against dust penetration Spray protected Protected against splashing water
IP21	IP41	IP43	IP54

6 Select whether EMC design is required or not

Note the code.
Ordering example, see below

EMC design implies that the cabinet is provided with conducting seals to withstand electromagnetic radiation.	EMC design not required	EMC design required
	6N	6Y

Ordering example Refer to 3 identical cabinets

Point	Item	Quantity	State when ordering
1	Cabinet frame	3	ECC2078
2	Bottom	3	BCc
3	Cover plates for bottom	3	CP
4	Roof	3	TC
5	Degree of protection	3	IP41
6	EMC design	3	6Y

Supplementing cabinet details to be selected on the following pages.

Alternative

You can select a door even for the rear. To be selected on page 10-11.

Hinged frame

The hinged frame fits the cabinet widths 700 and 800. The frame can be left- or right-hand. It can be locked by means of two locking devices, one on top and one at the bottom. The mountingplane U (in front of the frame) and V (in the back) are devided into S-modules. One S-module being 44,45 mm.

Number of S-modules in the hinged frame

Cabinet height mm	2200	2100	2000	1900
S-modules	43	41	39	37

Hinged frame, design A

The frame can be moved sideways

Equipment frame and cover plates

19" equipment frame

Frames are drilled for fitting terminal bases for plug-in relays of Combiflex design.

The equipment frames are available in two versions:

- With apparatus frame
- With support frame

Equipment frames with apparatus frame are designed for direct mounting of terminal bases, while equipment frames with support frame are used for apparatus groups assembled on apparatus bars.

The height of the frame is 4 S modules. The total width is 19" and the internal space for fitting equipment is 60 C = 420 mm. 1 C = 7 mm.

A strip showing C modules numbered from 01 to 60 is fitted on top of the apparatus and support frames.

With ends or mounting brackets

Equipment frames are available with ends or mounting brackets. Equipment frames with ends are used in hinged frames, while those with mounting brackets are designed to be fitted on the rear mounting planes of cabinets (plane B).

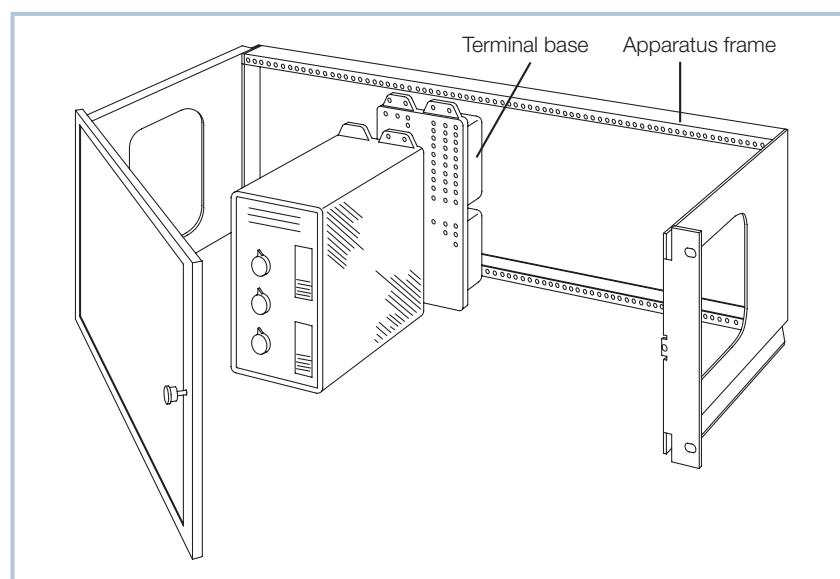

Equipment frames with ends have a cable-attachment rail on the left-hand side to which cables can be affixed with ties.

Front door

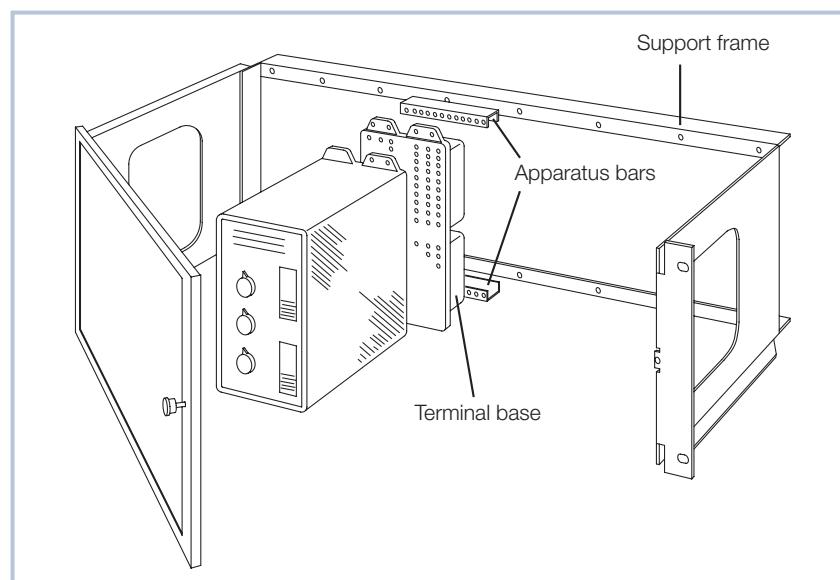

Equipment frames with ends are available with full-size sheet steel front door or with window of self-extinguishing carbonate plastic. The door is 4 S modules high.

General

Frames, ends and mounting brackets are galvanized. Doors are painted with RAL 7035 structure, light grey.

Equipment frame with apparatus frame, ends and glass door.

Equipment frame with support frame, ends and glass door.

19" equipment frame

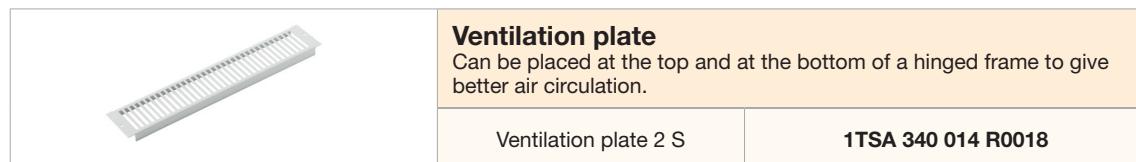

Description	With apparatus frame	With support frame
