

# How to upgrade Secure Connect software

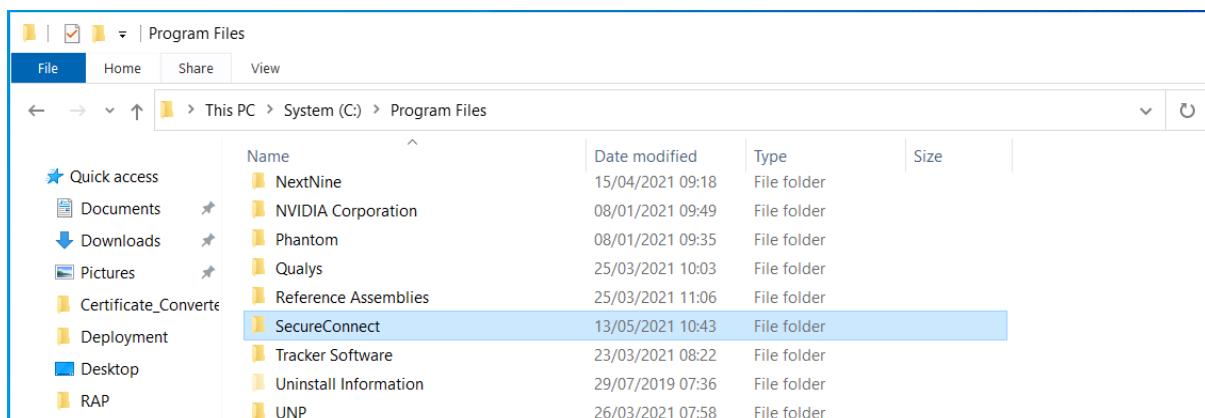

1. Navigate to: C:\Program Files\SecureConnect\InstallInfo\6.2.3.1\Uninstall\_Secure Connect and run file: Uninstall Secure Connect Installation.exe

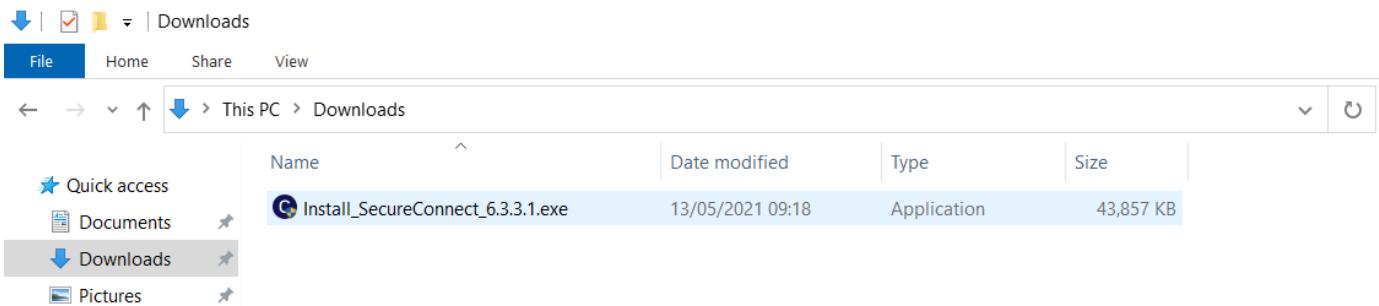

2. It will quickly go through all the uninstallation steps. Once done, the computer will have to be restarted

3. After the restart, navigate to: C:\Program Files and manually delete the 'SecureConnect' folder to remove all leftover files

4. New Secure Connect version can now be installed

5. After the installation, when connecting to a site for the first time, the correct certificate has to be selected. It's the one which has 'ABB Issuing CA 3' in the 'Issuer' field.  
The software will remember the selection so this step will not have to be repeated afterwards.
