Invest smartly through 'single box solution' for District Metered Areas (DMA)

Achieve even more with less capital expenditure. AquaMaster4 offers water utilities a 'single box solution' for District Metered Areas (DMA). It will measure flow and pressure with an in-built logger and be able to periodically verify its health. With Near Field Communications (NFC) technology, the AquaMaster4 enables fast configuration and access to data at the touch of a smart device. The data logger contents can also be downloaded in CSV format for offline interrogation. A combination of up to 10 years of battery life, readily available off-the-shelf batteries, no need for special cables and dedicated mobile phone applications to increase staff productivity help the AquaMaster4 deliver the lowest Total Cost of Ownership (TOTEX) over its complete product lifecycle.

Find out why the AquaMaster4 is the ideal solution for revenue billing and leakage and burst detection applications at bit.ly/ABBAquaMaster4
