

## The power behind a reliable future

### Next generation PVS980-58 central inverter solution

If you want a utility-scale PV plant that performs for years to come, you need equipment that stands the test of time. Choosing the next generation PVS980-58 5MVA central inverter solution means you can look forward to maximum plant yields for more than 25 years.

#### Easy installation

Plug and play integration plus versatile design equals **lower CAPEX**

- Cost-effective inverter and power block design
- Large power block up to 10 MVA
- Standardized shipping dimensions for reduced logistic costs
- DC/AC ratio up to 2.0

#### Lasting reliability

Built-to-last technology plus proven components equals **lower OPEX**

- 25+ years of design lifetime
- Patented hybrid cooling technology for reduced maintenance
- Ability to withstand harsh environments
- Remote monitoring, lifecycle services, easy and simple maintenance

#### High performance

Innovative design plus product efficiency equals **maximum yields**

- High conversion efficiency
- Low auxiliary power consumption
- Reliable and redundant design for high uptime
- Efficient modulation up to 1500VDC

#### Reduced LCOE for a reliable future

So, to power lasting performance choose the PVS980-58 inverter solution
