

# Software Product Life Cycle Update

TDS, TF.NET, VAS, WEBCCU, AND WINCCU

The ABB life cycle management model is designed to manage an orderly transition to new replacement products or to choose from various lifetime-extending services. At the same time, the model ensures access to continuing support for our customers.

## Current life cycle status

The mentioned products, **TDS, TF.Net, VAS, WebCCU, and WinCCU**, are formally in the **Limited** life cycle phase since 2019, according to the defined ABB life cycle management model specified above.

### 1 Life cycle plan

It is planned to keep the mentioned product in the **Limited** life cycle phase until the end of 2023, after which it will be transferred to the the **Obsolete** life cycle phase.

### 2 Recommended actions

Besides the regular maintenance actions, ABB strongly recommends combining a modernization of the solution with possible other new solutions. ABB will provide updates about new product releases that would potentially address some of the features provided by the above-mentioned software tools when available.

### 3 Product availability

The TDS, TF.Net, VAS, WebCCU, and WinCCU options are no longer available, and only WinCCU will be provided to existing customers when needed for equipment replacement.

## 4 Service availability

ABB offers a complete portfolio of services to ensure trouble-free operation and extended product lifetimes.

Training

Service contracts

Specialized support

Installation and  
commissioning

Spare parts

Engineering and consulting

Repair and refurbishment

Yours sincerely,

Giulia R. Seikel  
Product Line Manager - Flow Computer & RTU
