Insuring Future Makes Sense!

ABB knows that your investment in accurate and systematic inclusion measurement with LiMCA CM is important. To get the most out of the equipment, take the LiMCA CM Operator Training offered by ABB.

Investing in this training will optimize your operational cost. ABB has put together a comprehensive on-site training course dedicated to operators’ specific needs.

This two-day on-site training on the LiMCA CM analyzer is designed for individuals responsible for the operation, validation, maintenance, basic troubleshooting and repair of the analyzer.

These trainings are executed by factory certified service technicians.

LiMCA CM Operator Training Overview

- Two days in plant with the customer’s equipment
- Highlights differences / improvements for customers familiar with the LiMCA II (LiMCA CM’s predecessor)
- Understand the basics of LiMCA technology
- System components and physical interconnections
- Analyzer and sub-modules
- Software and Firmware
- System operation
- Taking measurements
- Safety procedures
- Preventive maintenance and trouble shooting
- Maximum of 3 people
