

Keeping your production running day and night?

Certainly.

ABB's experience in mining, mineral processing and cement industries started more than 50 years ago. Since then, we have installed over 250 complete plant-wide electrical, control and infrastructure solutions in more than 45 countries. The modernization of an existing plant to the latest standards, production and efficiency levels – performed while it is still in operation – requires a different set of skills and competencies than building a greenfield plant. Our experts have in-depth knowledge of all different mining and mineral processes and the expertise to execute complex projects – always with the objective to keep your production running day and night.
