Introduction

The Totalflow Windows Central Collection Unit (WinCCU[®]) is a set of functions integrated into a single Windows[®] program that is used to collect, edit, process and report on data generated from Totalflow flow computer units (FCU), remote terminal units (RTU) or NGC analyzers.

The following information contained within this start-up guide will walk the user through the basic installation and setup of WinCCU. For more detailed information, refer to the help files provided with the software.

Software Installation

System Requirements

Before beginning the installation of WinCCU, please ensure that the following system requirements are met:

Operating System	Windows 2000 or later Microsoft Internet Explorer v. 5.0 or later
Microprocessor	Pentium
Memory	512 MB
Hard Disk Space	50 MB
Disk Drive	CD Rom Drive
Video Adapter	SVGA or higher resolution
Peripheral	Mouse

When the user receives the application disk from ABB Totalflow, they will notice that several applications are stored on the disk. It should be noted that the user will only be able to load the application that they have purchased. The remaining applications will not load.

WinCCU Setup and Installation

FYI

Step 1

Load Application

- **1A** Load the Totalflow application disk in the PC CD/DVD drive. The disk will initialize. Once completed, the Totalflow Host Software Product screen displays. Click the Install Products button.
- 1B

The Application window displays. From the list of applications, select the WinCCU – Version X.XX button.

FYI

The version of WinCCU that the user is running will vary depending on the company's specific needs.

When the application is loaded, a Welcome screen displays. Click Next.

1D When the User Information dialog box displays, enter the user's name and company name. In the Serial Number field,

type in the serial number associated with the user's version of WinCCU. The serial number is printed on an insert inside the sealed envelope that contains the software disk. Click Next.

1

When typing in the serial number, the user needs to ensure that the number is typed exactly as it appears on the printed sheet, to include dashes (-).

Step 2 Application Set Up

2**A**

The WinCCU window displays. The user may determine the type of installation they wish to complete. Options are:

- Complete All WinCCU modules.
- Custom Allows the user to select which modules appear in the installation.
- Full All WinCCU modules.
- Minimum 1 Installation that only includes the Remote Communications and Archive support modules.
- Minimum 2 Installation that only includes the Remote, Archive and Long Term database support modules.

Select the installation type, and click the Next button.

- **2B** In the new Setup Type dialog box, make the appropriate selection. If multiple users and/or computers need to have WinCCU loaded onto them, place a check in the Install for All Users checkbox. Additionally, if this is an update to a pre-existing WinCCU application, place a check in the Override Existing Registry checkbox. Click the Next button.
- **2C** The Select Program Folder dialog box displays. The user can then set a program icon in the Program folder. The default is set to Totalflow WinCCU. If this default is acceptable, click the Next button; otherwise, rename the folder, and click the Next button.

A series of install wizards initialize. The user needs to install all of them to complete the overall WinCCU installation. Follow the on-screen instructions to load.

2D

Once loaded, the Totalflow WinCCU window displays with all of the relevant icons. The user can drag these icons to their desktop, for ease of use. A Setup Complete dialog box displays. The user can then launch WinCCU or choose to view the Readme file. Regardless, click the Finish button to complete the installation.

Remote Communication Setup

The following setup takes place at the remote flow computer site.

The following assumptions have been made:

- Radio connected to COM 1
- 9600 baud, 8 data bits, no parity, 1 stop bit, listen cycle of 4 and default values. These same values MUST be used at the WinCCU (Host) end.

Step 3

PCCU Set Up

Open PCCU32, and connect locally to the flow computer. From the Entry mode screen, select the main device at the top of the tree-view located on the left side. Under the Station Setup tab, type in the Station Name in the space to the right of the Station ID.

TOTALFLOW	In succession		
Communications	Station Se	ACP Applications App Licensing Resource	es Registry
- Totalflow - TCP - Totalflow - USB		Description	
MMI Serial - COM0 TE Remote - COM1	0.0.4	Station ID	TOTALFLOW
-COM2	0.0.5	Location	2103393-001
LevelMaster 1 XMV Interface	0.9.0	Date/Time:	02/05/09 16:12:35
B Pump Interface	0.9.0	Set Device with PCCU Date/Time	No
		Security	
E Flow Measurement	0.0.6	Security Code Level 1	
B AGA3 Setup	0.0.7	Security Code Level 2	
Analysis	0.7.3	Security Switch Status	Off
Digital Outputs	5	Sleep Mode	
B AGA3-2	0.10.2	Remote Comm Cutoff Voltage	11.90
Display Holding Registers	0.10.3	Sleep Mode Entry Voltage	10.90

Plunger Pad Controller	0.9.11	Wake Up Time	03:00:00
# Trend System	0.7.14	Wake Up Time Mode	Time from Start of Sleep

3B

In the tree-view, expand Communications, and select TF-Remote – Com 1. Click the Setup tab. Establish the port name, set the protocol of Totalflow Remote, set the port to COM1, set the baud rate to 9600 and set the listen cycle to 4. Once these are set, click the Send button.

Click the Advanced tab. Establish the interface as RS-232, the data bits to 8 and the parity to None. Upon completion, click the Send button.

Step 4

WinCPC Set Up (For this step, the user has returned to the office, or Host end)

During the initial installation of WinCCU, WinCPC was also loaded as a stand-alone application.

Open WinCPC from the Start > Program > Totalflow WinCCU menu. When the dialog box displays, select Setup from the window's menu bar and then Setup from the drop-down menu.

In the CPC Setup dialog box, click the browse button next to the Comm Server path, and locate the correct address. Set the left-most port name to COM1, Enable to Yes, Comm Type to RS232 and Char. Timeout to 3. Click the OK button and then the Start button.

Comm Serve	er Path	CCU32			ОК
Activity Log	Path C:\Win	CCU32		14	Cancel

Operations

Polling/Collecting Historical Data

The following instructions detail the steps necessary to collect historical data from flow computers in the field. Additionally, the instructions also cover how to output the files into archive files and long term database.

Before continuing, ensure that the meter ID has been built and remote communications have been tested.

Step 6 Setup Historical Data Collection

6A Click the Remote icon from the menu bar, and select History from the drop-down menu. In the Setup for Collecting Historical Data dialog box, the user can establish the output parameters for the historical data that they are choosing to collect.

In the Reports section, the user can select the following from the drop-down menu: File, Printer or Email.

If selecting File, the user needs to click the File Output Setup button, and browse to the location where they want the file to be saved. If the user selects Email, click the Mail Setup button. This will allow the user to setup the email address where the file can be sent.

Additionally, the user should select the report type by clicking in the corresponding checkbox.

Reports Log Period	File	ОК
Daily Characteristics	File Output Setup	Cancel
Events	Mail Setup	Help
Laptop File		
DOS TFData File	59 	Amount of Data to Collect
Spreadsheet Log Perio	d File	Flow Data Auto

6C

The user also selects the output type. Select the corresponding checkbox such as Archive File, Laptop File or Long Term Database.

6D

Finally, the user should select the report output style. These selections include various spreadsheets as well as ASCII and other pre-defined file types. Click the OK button.

If Screen Output was selected, the report is displayed. The user may navigate through the various tabs to view the collected information. Based on the output that was selected, the user can then go in and edit the fields.

Trending

The following information details the set up for trending. This includes set up for both the flow computer and WinCCU. The flow computer has the built-in capability to store flow data. Trending allows the user to keep track of the changes to specific points at a specific time interval. Additionally, the user can upload, download and edit this information.

FCU Trend Set Up

- **7A** In WinCCU, click the ID Manager icon, and select Edit ID from the drop-down menu. In the Edit a Device ID dialog box, ensure that the Register Based Device checkbox, under Options, is checked. Click the OK button.
- 7B

Click the Remote icon, and select Configure from the dropdown menu. The user should now be connected to the flow computer remotely.

- **7C** Select the meter ID from the tree-view and then select the Applications tab. Move to slot 21, and select Trend System from the drop-down menu. Click the Send button. The Trend System application should appear in the tree-view.
- **7D** Click the established measurement tube (not the Station ID), and expand the tree-view. From the available tabs on the right, select Current Values.

Assign a file name and description in the corresponding fields. Click the Add button. A new dialog box displays.

TIP 🛥 🧕

For the purposes of this example, the following will trend the static pressure.

8C In the Description field, type in Static Pressure and PSIA for the Engineering Units. Under Variable, ensure that App/Array/Register is selected from the drop-down menu, and enter the App/Array/Register number in the fields to the right. Under Trend Data, assign a minimum value of 0 and a maximum value of 100. Click the OK button.

8D Return to Step 8B and repeat steps 8B and 8C for each item to trend. In this example, those may be DP, Temp and FR.

After all the variables have been added, click the Save to File button. Note the directory and name of this file.

Click the Save button to save the trend file to the selected directory.

8G

Click the Send to Device button to send the file to the flow computer.

Step 9

9A

View Trend File

To view the trend, click the Trending icon, and select Device

Trend from the dropdown menu. When the Device Trend dialog box displays, click the Browse button. This reads the flow computer's trend file and should receive the trend file that the user just sent.

9B In the new window, ensure that the trend file is selected. Select a time and date range, and place a check in the Screen checkbox. Click the OK button to

Device Trend	×

Reports

Reports can be generated from PCCU data collection, laptop file utilities, archive file utilities and long term database utilities. The data that is gathered comes from the utility that calls for it. Archive and long term data may contain many collections, whereas laptop and PCCU data are single collections. The user is given the ability to select from preconfigured reports or create a custom report via the New Report button. Once created, this newly created report will be displayed with the standard reports. Invalid reports for a particular data source are grayed out and may not be selected.

Step 10

Generate a Standard Report

- **10A** From the Home screen, click the Archive icon, and select Reports from the drop-down menu. In the Reports dialog box, expand either the Meter Report or Summary Report option. The various reports under each caption display. Select the corresponding report(s) by placing a check next to it. Select a time frame by clicking in the Last radio button and entering the number of days back that the user wants the report to collect data, or, the user can select the Date Range radio button, and specify a start and stop date for data collection.
- **10B** In the Report Output section, the user can select the type of file output format from the various options presented in the drop-down menu.

If selecting File, the user needs to click the File Output Setup button, and browse to the location where they want the file to be saved.

If the user selects Email, click the Mail Setup button. This will allow the user to setup the email address where the file can be sent.

Once finished, click the Do Reports button. This generates the report.

Meter Reports	Time/Date Range Do I	Reports
🗄 🗖 Summary Reports	Last 7 Full Days Pr	eview
	C Date Range	lose
	Start 6/18/2009 🛨	lelp
	Stop 6/25/2009 Cal Lat	bration eader
	Field Balance Groups Input Dutput	
	None 💌 None	-
	10	
	Report Output	

Step 11

Generate a Custom Report

11A From the Home screen, click the Archive icon, and select Reports from the drop-down menu. In the Reports dialog box, click the New Report button. In the CustomRptEditor dialog box, assign a title, up to 25 characters long, in the allotted field.

11B Determine the desired output.

If the user wants to output a spreadsheet, place a check in CSV Format checkbox.

If the user wants the report added as a tab to the View option of the Laptop and Archive File Utilities, as well as the Edit view of the Meter File Utilities, place a check in the Create View checkbox.

Select the desired print style, report style and report type from the respective drop-down menus. Click the Add button.

File Name	r				CSV Format	Print Styl	le		OK
Report Title					Create View	C Lands	scape		Cancel
Report Type Selections	Format	Enable	Display	Title	Report Style	Source	Trend	▼ VarLi	Add

11E

In the RPT Units field, enter the engineering units. The engineering units will be displayed in a row below the title once the cursor is located in the field.

11F In the Title field, assign a title that represents the variable.

- **11G** In the Display field, select either Avg or Total Avg from the drop-down menu. Avg averages like variables of all selected meters, while Total Avg. sums like variables of all selected meters.
- **11H** Under Variable Calculations, specific range limits may be placed on the variable by placing a check in the Var Limit checkbox and entering a value in the Var Amount field. This is a \pm value. Variables that are outside the range have an * displayed by the title. Click the OK button to return to the main Report Editor screen. A new row with the variable is added. Click the OK button. A dialog box prompts the user for a report title. Enter a name, and click the Save button.
