ATTENTION
The sensor should be installed by technically qualified personnel. Failure to install the sensor in compliance with applicable codes and regulations and according to the manufacturer’s recommendations may result in electrical shock, fire hazard, unsatisfactory performance or equipment failure, and may void the sensor warranty.

WARNING
Only qualified individuals who are familiar with appropriate national codes, local codes and sound practices should install, repair or modify electric motors and/or related accessories. Installation should conform to appropriate codes and practices. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

WARNING
Electrical Live Circuit Hazard. Do not touch electrically live parts or equipment. Disconnect, lock out and tag out the motor’s power supply before installing or servicing the sensor.

CAUTION
Motor Surface Temperature Hazard. The external surface of an electric motor may reach temperatures which can cause discomfort, burns or injury to individuals who come into contact with the hot surface. For safety reasons the motor should be switched off and allowed to cool before attempting to install the sensor. Motor surface temperatures should only be measured with suitable instruments and not estimated by hand touch or direct skin contact. Failure to observe this precaution could result in bodily injury.

CAUTION
Do not replace batteries! Incorrect use of batteries may void the certifications of the smart sensor, such as hazardous area certifications, safety certifications, and IP rating. Dispose of used sensors according to instructions.

Sequence for setup

Step 1 Install the Ability™ Smart Sensor Platform App
- The Smart Sensor Platform App can be found in: Apple – App Store, Android – Google Play Store
  Note: In some countries these stores may not be accessible. For more information see www.abb.com/smartsensor.

Step 2 Register in the Ability™ Smart Sensor Platform App
- Follow the sign up link
- Alternatively, sign up on the web portal at https://smartsensor.abb.com
- Skip this step if you are already registered

Step 3 Log in to ABB Ability™ Smart Sensor Platform App
- Follow the instructions on the screen

Step 4 Activate the Ability™ Smart Sensor with the ABB Ability™ Smart Sensor Platform App
- Follow the instructions on the screen.

Step 5 Install ABB Ability™ Smart Sensor
- Verify that you have the right components and install the sensor according to the instructions on page 3.
- Follow the safety instructions carefully.

Step 6 Add the motor in the ABB Ability™ Smart Sensor Platform App

Step 7 Take first measurements and check the motor condition

Step 8 For more detailed instructions
- Visit www.abb.com/smartsensor
Items included in the ABB Ability™ Smart Sensor kit:
• 1 Loctite™ 3463 mounting putty (1 tube)
• 2 Receiving mount
• 3 Mounting bracket
• 4 Phillips head screws (2 qty) M4-0.7 X 10mm
• 5 Tapered hex head screw (1 qty) 1/4" x 5/8" (UNF 28)
• 6 ABB Ability™ Smart Sensor

Additional items needed but not included in the kit:
• Degreasing agent
• Clean shop rag
• Rubber gloves
• Mechanical abrasive pad (i.e. sandpaper)
• Allen wrench (4 mm or 5/32")
• Small Phillips head screw driver
• Leveling tool
• Cutting tool
• Loctite™ Blue Threadlocker

Further information on Loctite™ 3463 mounting putty is available from:
• Safety and technical data sheet for Loctite™ 3463 mounting putty are available from: http://www.henkel.com

Installation instructions

Where to mount:
1. Sensor must be located between the drive-end and non-drive-end bearings, as close to the center as possible. Note: The sensor mount cannot be removed after installation.
2. For best Bluetooth® communication, mount the sensor with a clear line of sight to any communication devices to be used: your smartphone or a Bluetooth® gateway.
3. The mounting orientation must be such that the A-axis on the sensor housing is parallel to the rotating shaft. If this is not physically possible, the T-axis must be parallel to the rotating shaft.

Supported motors
• This mounting instruction applies for fin-cooled motors up to frame sizes equivalent to IEC 450.
• Detailed information about which motor types can be monitored with the ABB Ability™ Smart Sensor can be found on www.abb.com/smartsensor.
Always verify the sensor receiver mount is the correct size for your motor. It must be thin enough to fit between the cooling fins in a preferred location according to the installation instructions found on page 2 of this manual. The sensor receiver must be long enough to make contact with the motor frame and extend beyond the cooling fins. Loctite™ 3463 putty will be used to fill the gaps between the cooling fins and the sensor receiver mount.

**Step 1**

Use solvent (i.e. paint thinner or acetone) to remove debris and oils from mounting surface.

*CAUTION: REVIEW AND FOLLOW ALL MANUFACTURER’S INSTRUCTIONS AND SAFETY PRECAUTIONS WHEN USING SOLVENTS.*

**Step 2**

Use sandpaper or similar abrasive material to remove paint from mounting surface. Repeat step 1.

**Step 3**

Remove putty from tube and cut a 1.5 to 2.0 inch (approx. 4 to 5 cm) length for use in installation of sensor mount. Amount used will vary depending on fin width of motor.

*CAUTION: REVIEW AND FOLLOW ALL MANUFACTURER’S INSTRUCTIONS AND SAFETY PRECAUTIONS WHEN USING ADHESIVE MOUNTING PUTTY.*

**Step 4**

Twist and knead putty until all the putty has exactly the same uniform color according to manufacturer’s instructions. This should take no more than 5 minutes.

**Step 5**

Firmly apply putty to clean surface between motor fins, completely filling the gap between motor fins. Putty should be approximately 1.25 to 1.5 inch (3 to 4 cm) wide.

**Step 6**

Immediately after applying putty, insert sensor mount into center of putty, pressing firmly until bottom of mount makes contact with motor frame. Form any excess putty against sides of mount. For best adhesion, the sensor mount should not make direct contact with the fins.
Step 7

ALLOW SUFFICIENT TIME FOR PUTTY TO HARDEN BEFORE PROCEEDING. CURING TIME DEPENDS ON SURFACE AND AMBIENT TEMPERATURES. TYPICAL CURING TIME IS 10 MINUTES, BUT THIS CAN TAKE LONGER IN COLD ENVIRONMENTS.

Step 8

Secure mounting bracket to sensor mount using hex head screw. If necessary, apply Loctite™ Blue or equivalent threadlocker to threads of the hex head screw, and to the surface of the sensor mount.

CAUTION: REVIEW AND FOLLOW ALL MANUFACTURER’S INSTRUCTIONS AND SAFETY PRECAUTIONS WHEN USING THREADLOCKER.

Step 9

Use a level to verify the alignment. The axial direction (white line) must be parallel to the pump shaft. The tangential axis (red line) should be at a right angle to the previous one, on a plane tangential to the housing. The the radial direction (black line) points towards the center line of the shaft. If this is not possible, the T-axis must be parallel to the rotating shaft.

Step 10

Use 2 Phillips head screws to securely fasten ABB Ability™ Smart Sensor to mounting bracket.

Next step

Digitally connect Smart Sensor using the ABB Ability™ Smart Sensor app. Log on using your credentials and follow prompts to connect.
