
USER GUIDE

MAN0151 Rev 7

NEXUS-3 Series

Style conventions used in this document:

UI Text: Text that represents elements of the UI such as button names, menu options etc. is presented with a grey background and border, in Tahoma font which is traditionally used in Windows UIs. For example:

Ok

Standard Terms (Jargon): Text that is not English Language but instead refers to industry standard concepts such as Strategy, BACnet, or Analog Input is represents in slightly condensed font. For example:

BACnet

Code: Text that represents File paths, Code snippets or text file configuration settings is presented in fixed-width font, with a grey background and border. For example:

```
$config_file = c:\CYLON\settings\config.txt
```

Parameter values: Text that represents values to be entered into UI fields or displayed in dialogs is represented in fixed-width font with a shaded background. For example

10°C

Product Names: Text that represents a product name is represented in bold colored text. For example

INTEGRA™

Company Brand names: Brands that are not product names are represented by bold slightly compressed text:

ABB Active Energy

PC Keyboard keys: Text representing an instruction to press a particular key on the keyboard is enclosed in square brackets and in bold font. For example:

[Ctrl]+[1]

1 Overview

CYBERSECURITY DISCLAIMER:

This product is designed to be connected to and to communicate information and data via a network interface. It is your sole responsibility to provide and continuously ensure a secure connection between the product and your network or any other network (as the case may be). You shall establish and maintain any appropriate measures (such as but not limited to the installation of firewalls, secure VPNs, application of authentication measures, encryption of data, installation of anti-virus programs, etc.) to protect the product, the network, its system and the interface against any kind of security breaches, unauthorized access, interference, intrusion, leakage and/or theft of data or information. ABB Ltd and its affiliates are not liable for damages and/or losses related to such security breaches, any unauthorized access, interference, intrusion, leakage and/or theft of data or information.

This chapter provides an overview of the NEXUS-3 Series device system.

Watchdog	Internal MCU is not functioning normally	Internal MCU is not functioning normally	Firmware bootloader is active	Internal MCU is functioning normally
LEDs 1-4	Currently selected user mode	-	-	-

ETHERNET PORTS

 <div>Link LED (Green)</div> <div>Speed LED (Green/Yellow)</div>	LED	Color	State	Condition
	Link	-	Off	LAN link is not established
		Green	On	LAN link is established
			Blinking	LAN activity occurring
	Speed	-	Off	10 Mb/s data rate
		Green	On	100 Mb/s data rate
		Yellow	On	1000 Mb/s data rate

2 Installation and configuration

Note: The information in this chapter provides an overview of the installation and configuration requirements of the NEXUS-3 Series device. The NEXUS-3 Series device is designed for specific applications and needs to be installed by qualified personnel with RF and regulatory-related knowledge.

POWERING ON THE NEXUS-3 SERIES DEVICE

1. Install the NEXUS-3 Series device on the wall mount using a wall mounting kit, or Install the NEXUS-3 Series device on the rack infrastructure using DIN-rail mounting brackets.
2. Connect a network cable.
3. Connect the supplied PSU to the NEXUS-3 Series device

4. Press the power button to turn it on.

Note: For warranty purposes it is recommended that only the included power supply should be used with NEXUS-3 Series devices.

Warning: NEXUS-3 can be powered by a 24 V DC supply only.

The device will be damaged if connected to a 24 V AC power source.

5. Attach the supplied DB9-to-screw-terminal adapters to the two COM ports.

Note: For consistency with legacy NEXUS 2 hardware, the Screw Terminals are labelled above in a different way to Cylon BACnet devices (FBXi, CBXi and CBX controllers). The “-” pin is labelled “A” and the “+” pin is labelled “B”.

On Cylon BACnet devices The “-” pin is labelled “B” and the “+” pin is labelled “A”.

6. Connect and configure devices using the RS485 ports.

MOUNTING INSTRUCTIONS

DIN RAIL MOUNTING

Step 1: Attach wall mounting brackets to the chassis

Step 2: Attach DIN Rail mounting brackets to the chassis

Step 3: Clip system to the DIN Rail

DIN Rail Edge Mounting

DIN Rail Back Mounting

WALL (SHOCK AND VIBRATION) MOUNTING

Step 1: Attach wall mounting brackets to the chassis

Step 2: Mark and prep holes in surface for mounting

Step 3: Fasten system to surface

3 Software Configuration

INTRODUCTION

The following provides details on the software configuration of the NEXUS-3 Series hardware. Please follow the steps contained within this section for proper setup and configuration.

TOOLS REQUIRED

The following tools will be required for proper configuration of the system:

- PC/Laptop
- Ethernet cross-over cable, or other network connection to your NEXUS-3 Series device
- Standard web-browser such as Windows Edge, Mozilla Firefox, Apple Safari, or other.
- NEXUS-3 Series License file pre-installed

CONNECTING TO A NEXUS-3 SERIES DEVICE

The NEXUS-3 Series device is shipped with a default IP address (192.168.1.251) and subnet mask (255.255.255.0) on the primary Ethernet Port.

Your laptop's network card must be configured in a manner where it may access this IP network setting. Refer to your operating system documentation for details on how to configure your network card.

See *Ethernet Settings* on page 26 for details on how to reconfigure NEXUS-3 Series device IP Address.

Note: The recovery Ethernet Port is configured with a default IP address (192.168.1.250) and subnet mask (255.255.255.0), so that if connectivity is lost on the primary LAN port, you can use the recovery port to gain access to the NEXUS-3 Series controller as described below and reset it.

Primary and Recovery ports should not be both connected at the same time – unplug the primary port when connecting your laptop to the recovery port.

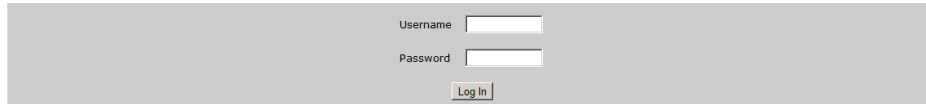

To use the recovery port:

- Depending on your Operating System, set your Network Adaptor to the 192.168.1.0/24 IP network. e.g. in Windows, in **Settings > Network & Internet** set the IP address to 192.168.1.1 and Subnet Mask to 255.255.255.0 (i.e. the default value).
- You should now be able to reach <http://192.168.1.250/> in a browser on your PC and proceed from there. (If you have HTTPS enabled, you can reach the target at <https://192.168.1.250/> instead.)
- Once recovery is complete, the NEXUS-3 Series device must be rebooted.

LOG-IN

To log-in to the NEXUS-3 Series device:

1. With your PC's network card configured, open any standard web browser.
2. Browse to the IP address of your NEXUS-3 Series device as defined during installation.
3. If your connection is successful, the main login page of ASPECT will be displayed:

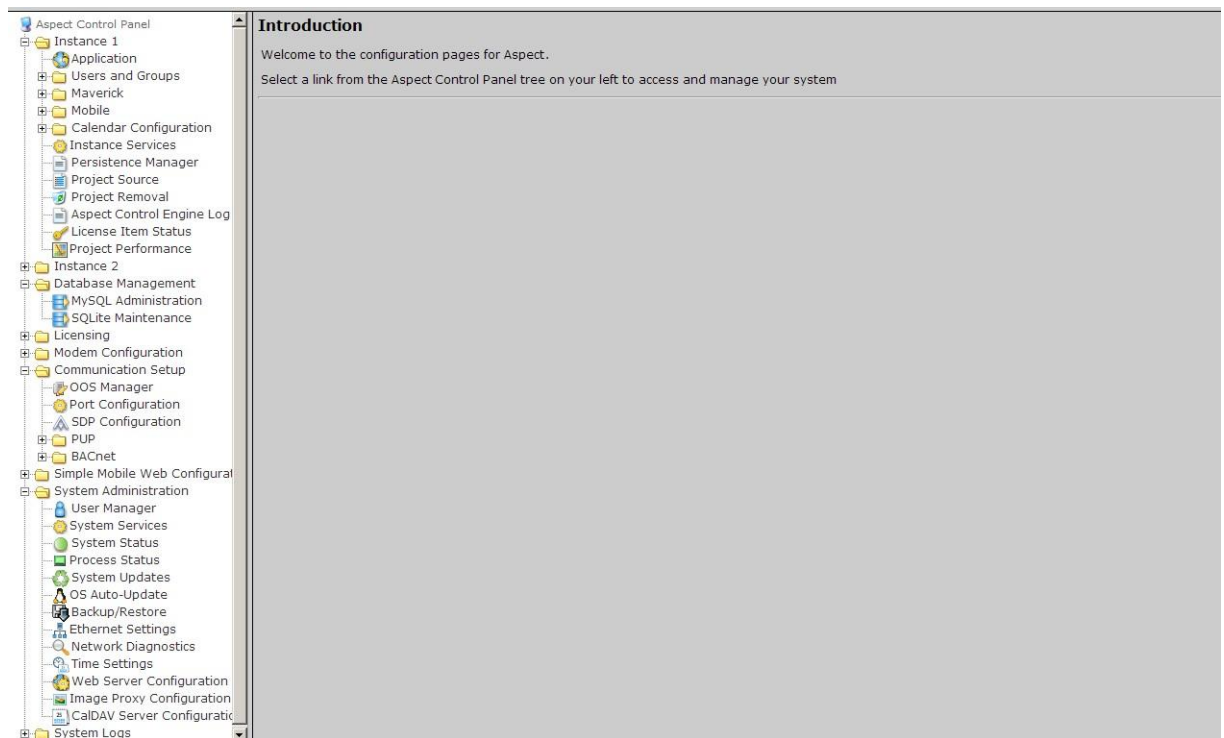

The screenshot shows a login form with two input fields: 'Username' and 'Password'. Below these fields is a 'Log In' button. The form is set against a light gray background.

4. Enter the case-sensitive default username and password into the fields provided.
5. Click the **Log In** button.

CONTROL PANEL

When you successfully log-in, you will be directed to the Control Panel. The Control Panel contains a navigation tree to the left of the web user interface; allowing users to select different configuration areas of the product.

PROJECT INSTANCES

Two instances are available within the **NEXUS-3 Series** device. This provides the capability to host up to two projects within the target. Each instance runs its own Aspect Control Engine allowing service to be performed on separate instances. Within Instance 1 and Instance 2, the same options exist for the following:

- Calendar Configuration
- Users and Groups
- Mobile
- Instance Services
- Project Source
- Project Removal
- Aspect Control Engine Logs
- License Item Status
- Project Thread Status

CALENDAR CONFIGURATION

The Calendar Configuration area is used to configure iCalendar integration variables of the **NEXUS-3 Series** device. Within this section there are two pages:

- Calendar File
- Calendar User

Calendar File

Calendar File can be used to browse and modify what calendars have been previously published to the instance, as well as allow users to manually upload iCalendar files (files with .ics extensions) to the device.

- To upload a saved calendar file, simply select the Browse/Choose File button and locate the iCalendar file on your computer. Once located, click the Upload button.
- To delete a previously published calendar, place a check mark next to the corresponding file and select the Delete button.

Calendar File Management

Upload and manage calendar files stored on this device. Calendar User credentials must be provided in order to download a calendar.

Calendar file (.ics):
 No file chosen

Calendar .ics files:	Date Modified	Delete
Monday thru Friday 8to5_Calendar.ics	July 27 2011 14:59:42	<input type="checkbox"/>

Calendar User

Calendar User provides the ability to change the default username and password credentials that are required to allow iCalendar-based tools to publish data to the **NEXUS-3 Series** device. By default, the username (*calendar*) and password (*user*) can be changed to any desired credential set. When referencing Calendars in Aspect Studio, these credentials must be specified in order to properly access the file.

Calendar Configuration

Use the following form to configure the Calendar username and password.

Username:

Password:

Confirm Password:

USERS AND GROUPS

Users and Groups are included within each instance in the **NEXUS-3 Series** device. This provides the ability to manage users in the Aspect control instance it serves.

User Manager

Add, edit, and delete users.

[Add User](#) | [Print Users](#)

User	Groups	Delete <input type="checkbox"/>
aamuser	MIXAdmin	<input type="checkbox"/>

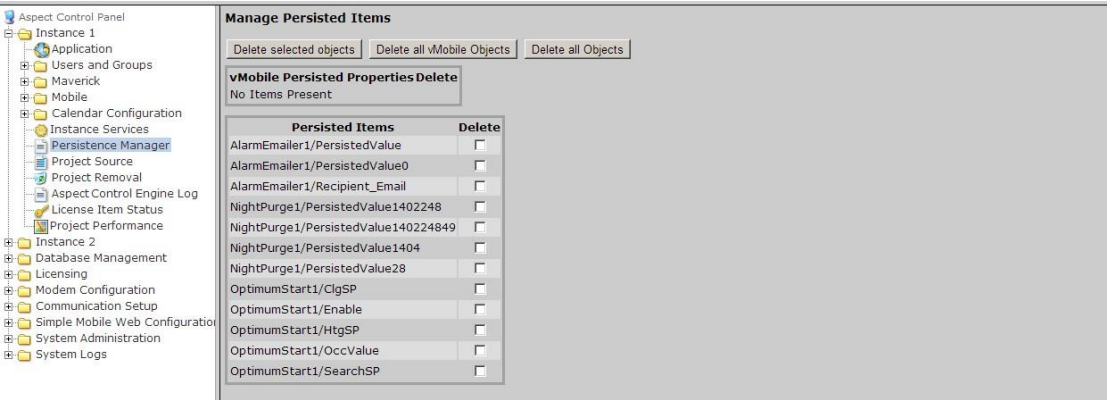

INSTANCE SERVICES

The Instance Services provides users with the ability to restart the Aspect Control Engine for the instance they are working with. Only one option is available in the Instance Services drop-down which will allow the instance to be reset.

PERSISTENCE MANAGER

The Persistence Manager area is used to manage and delete Persisted data. Persisted data is localized data stored from Persisted Elements that may be present in an Aspect project, as well as data persisted by vSTAT elements when such functionality is implemented in a delivered solution.

PROJECT SOURCE

The Project Source page provides administrators with the ability to download a password protected copy of the Aspect project deployed to the Instance. When selecting this in the Control Panel, you will be prompted to re-enter your credentials in order to download a copy of the project.

The required credentials will be the same as the ones used to originally deploy the project.

Project Name	Deployment Date	Archive Size
test_10803.zip	2013-04-11 09:40:47	679.2 KB

PROJECT REMOVAL

The project removal page provides administrators the ability to remove a currently deployed project from an Aspect instance.

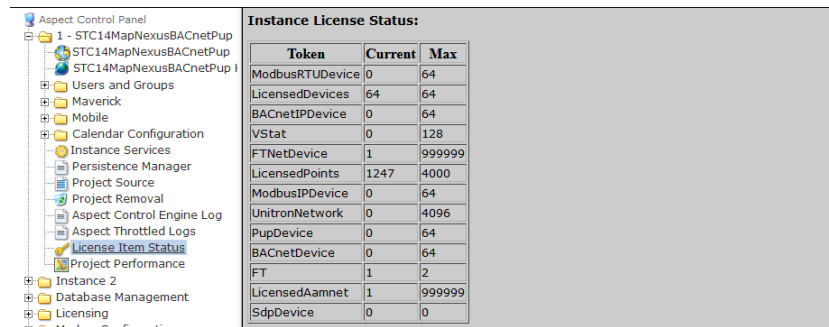

ASPECT CONTROL ENGINE LOG

The Aspect Control Engine log provides administrators and technicians the ability to view project status and debugging information relating to the health of the deployed Aspect project. Up to 10 pages of Aspect logs are contained and individual logs can be downloaded.

LICENSE ITEM STATUS

The License Item Status area provides the ability to view how many current license items a project may be using, as well as the maximum amount of licenses available for a particular feature or function.

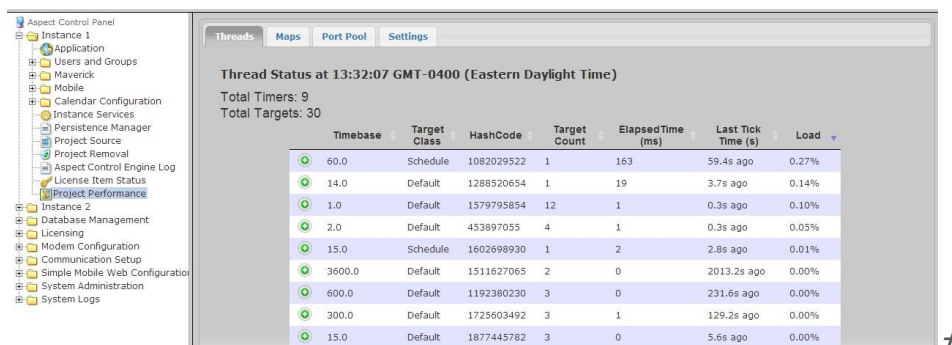

Token	Current	Max
ModbusRTUDevice	0	64
LicensedDevices	64	64
BACnetIPDevice	0	64
VStat	0	128
FTNetDevice	1	999999
LicensedPoints	1247	4000
ModbusIPDevice	0	64
UnitronNetwork	0	4096
PupDevice	0	64
BACnetDevice	0	64
FT	1	2
LicensedAamnet	1	999999
SdpDevice	0	0

PROJECT PERFORMANCE

The Project Performance area provides the ability to dynamically view and monitor the status of Threads, Maps, and Ports being used by the Aspect project loaded into the target.

By default, the all Tabs will update information every 15 seconds. You may adjust this update timer by choosing the Settings tab, and changing the Global Settings Update time.

Timebase	Target Class	HashCode	Target Count	ElapsedTime (ms)	Last Tick Time (s)	Load
60.0	Schedule	1082029522	1	163	59.4s ago	0.27%
14.0	Default	1288520654	1	19	3.7s ago	0.14%

3600.0	Default	1511627065	2	0	2013.2s ago	0.00%
600.0	Default	1192380230	3	0	231.6s ago	0.00%
300.0	Default	1725603492	3	1	129.2s ago	0.00%
15.0	Default	1877445782	3	0	5.6s ago	0.00%

DATABASE MANAGEMENT

Database Management is the centralized location for all database storage and contains paths to MySQL Administration and SQLite Maintenance.

MYSQL ADMINISTRATION

The **MySQL Administration** item in the webUI tree links to an administration interface for ASPECT's MySQL Database Server. To access the Database Interface, the user must enter (case sensitive) login credentials. The default credentials are:

- Username - **matrixac1**
- Password - **aam**

Language: English MySQL » Server

Adminer 4.7.3

DB:

[SQL command](#) [Import](#) [Export](#)

Select database

[Create database](#) [Privileges](#) [Process list](#) [Variables](#) [Status](#)

MySQL version: **5.1.73** through PHP extension **MySQLi**

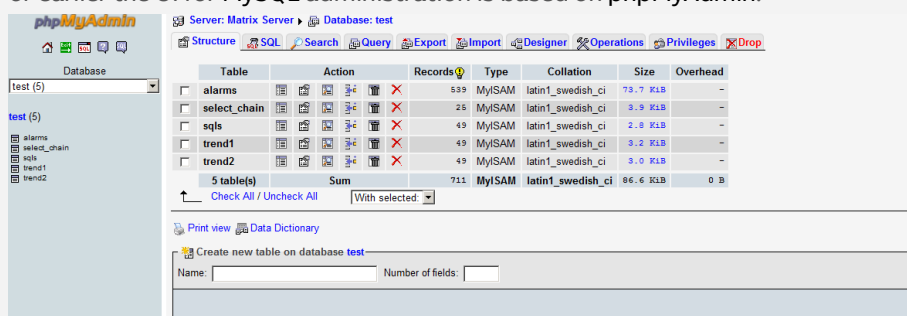

Logged as: **matrixac1@localhost**

	Database - Refresh	Collation	Tables	Size	Compute
<input type="checkbox"/>	Aspect	latin1_swedish_ci	?	?	?
<input type="checkbox"/>	information_schema	utf8_general_ci	?	?	?
<input type="checkbox"/>	mysql	latin1_swedish_ci	?	?	?
<input type="checkbox"/>	phpmyadmin	latin1_swedish_ci	?	?	?
<input type="checkbox"/>	web_configuration	latin1_swedish_ci	?	?	?

Selected (0)

Drop

Note: MySQL administration in ASPECT 3.03.02 and later uses Adminer. However, on devices running 3.03.01 or earlier the UI for MySQL administration is based on phpMyAdmin:

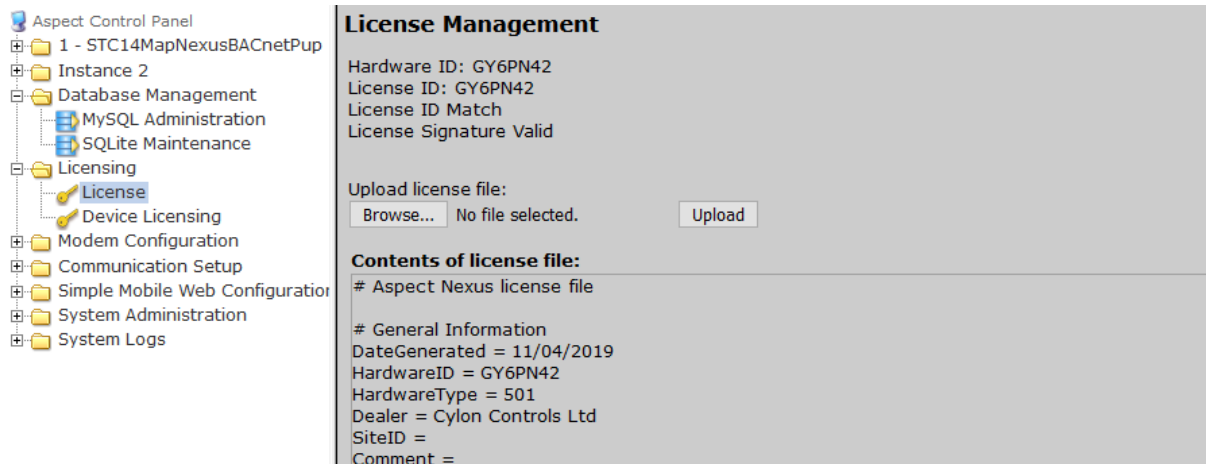

SQLITE MAINTENANCE

The **SQLite Maintenance** page provides users with the ability to manage the **SQLite** database. This page shows the database files and sizes.

LICENSING

The **License** page provides the ability to view the current license status of the **NEXUS-3 Series** device as well as a method to upload/download license files. If a license file is uploaded, Cylon Controls recommends rebooting the **NEXUS-3 Series** device to ensure the license file is successfully applied.

COMMUNICATION SETUP

The **Communication Setup** page provides administrators the ability to configure manual Out of Service entries, SDP Network Properties, BACnet IP Router, BBMD and Time Synchronization settings.

OUT OF SERVICE MANAGER (OSS)

The **Out Of Service Manager (OSS)** provides a single location that allows administrators to manually mark devices out of service using the Manual OOS check boxes.

BBMD SETTINGS

The **BBMD settings** area is used to configure the BACnet/IP Broadcast Management Device (BBMD) table setup for BACnet networks.

The screenshot shows the 'BBMD Configuration' page. On the left is a tree view with 'BBMD Settings' selected. The main area has a title 'BBMD Configuration' and a sub-header 'Configure BBMD.' with a link 'Add Device'. Below this is a note: 'Entries may only be added to the BBMD configuration when BACnet IP or BACnet Ethernet protocols are enabled'. There is a table with columns: IP Address, UDP Port, Subnet Mask, and Delete. The first row contains the values: 192.168.50.100, 47808, 255.255.255.255, and a delete checkbox. Below the table is another note: 'Entries may only be added to the BBMD NAT configuration when BACnet NAT is enabled'. There is a second table with columns: IP Address, UDP Port, Subnet Mask, and Delete, and a 'Submit' button at the bottom.

MODBUS NETWORK PROPERTIES

The **Modbus Network Properties** page is used to set the configuration for Modbus communications.

The screenshot shows the 'Modbus Network Properties' page. On the left is a tree view with 'Modbus Settings' selected. The main area has a title 'Modbus Network Properties' and a sub-header 'Modbus Configuration'. Below this are five configuration items, each with a label and a dropdown menu: 'Modbus Timeout(seconds)' set to 3.0, 'Modbus Write Retries' set to 0, 'Modbus Read Retries' set to 0, 'Modbus Out Of Service Time (seconds)' set to 60, and 'IP Gap Delay' set to 20. A 'Submit' button is at the bottom right.

TIME SYNC SETTINGS

The **Time Sync Settings** area provides the ability to configure BACnet network time synchronizations.

The screenshot shows the 'Time Sync Configuration' page. On the left is a tree view with 'Time Sync Settings' selected. The main area has a title 'Time Sync Configuration' and a sub-header 'Configure the BACnet Network configuration.' Below this is a 'Time Sync Interval' dropdown menu set to '1 Hour'. There is a section for 'Time Sync Recipients (Up to four networks)' with four empty input fields. A 'Submit' button is at the bottom right.

SYSTEM ADMINISTRATION

The System Administration area contains system settings for the NEXUS-3 Series device. These fields include the User Manager, System Services, System Status, System Updates, Ethernet Settings, Time Settings Web Server Configuration, Process Status, Image Proxy Configuration, and CalDAV Server Configuration.

USER MANAGER

The User Manager area provides fields to setup, add and remove administrative users from the NEXUS-3 Series device. Administrative users are granted full access to the Aspect Control Panel while users/groups created within an instance are only allowed access to deployed projects.

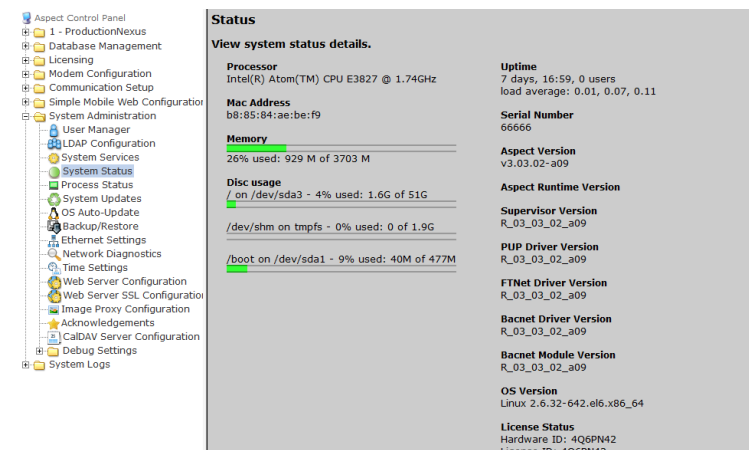

SYSTEM SERVICES

The System Services area provides administrators with the ability to control key services relative to the target. Through this area, users can restart specific services of the NEXUS-3 Series device. Simply select an option from the drop-down and click Submit. A message will indicate that the service has been stopped/started/restarted successfully.

SYSTEM STATUS

The System Status page provides details on the current health of the system including Uptime, memory (RAM) utilization, disk space and all information pertaining to revision levels.

PROCESS STATUS

This shows the result of a top command which produces an updating list of current processes running.

top - 15:46:11 up 3 days, 2:45, 0 users, load average: 0.03, 0.02, 0.00

SYSTEM UPDATES

The **System Updates** area is used to perform firmware upgrades to the ASPECT device. These firmware updates can be obtained from the ABB Cylon Toolbox / Support Site.

Update System - Confirm

CAUTION: Please be aware that the Aspect Control Engine will be shut down once you click continue.

It is recommended to download a **Configuration Backup** using [Backup/Restore](#) before applying updates.

Click "Continue" to proceed to upload stage.

Clicking on the **Continue** button opens the upload page:

Update System - File Upload

Upload the ".aam" file and then submit the form to execute the system update.

Update Aspect: No file chosen

OS AUTO UPDATE

Permits whether to allow or disallow automatic YUM updates. It is recommended that this setting be left at “Enabled”.

BACKUP/RESTORE

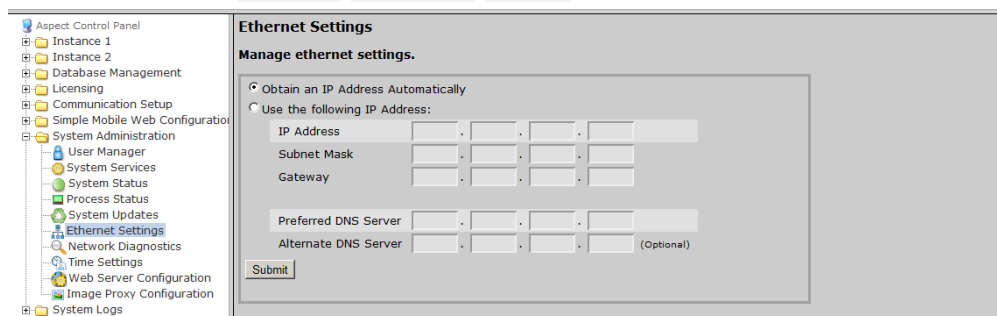

Backup /Restore provides the means to backup an ASPECT target's device configuration (network addresses, port and driver configuration, etc). To create a backup, simply click the Download button.

ETHERNET SETTINGS

The Ethernet Settings area permits for Ethernet address configuration of the NEXUS-3 Series device. The NEXUS-3 Series device can support static IP addresses or DHCP addressing from a valid DHCP server. Simply select the appropriate address setting for your application.

- To configure the device to use DHCP addressing, select the Obtain an IP Address Automatically radio button. In most DHCP environments, a resolvable DNS name or reserved IP address is assigned to the NEXUS-3 Series device by the local network administrator prior to configuring the device for this option.
- To configure the device to use a static IP address, select the Use the following IP Address radio button, then enter your IP address, Subnet Mask, Gateway, and DNS information into the boxes provided below.

NETWORK DIAGNOSTICS

The **Network Diagnostics** area contains useful troubleshooting methods for network connectivity problems without the need for additional tools.

The screenshot shows the 'Network Diagnostics' section of the software configuration interface. The left sidebar contains a tree view with the following items: Aspect Control Panel, Instance 1, Application, Users and Groups, Maverick, Mobile, vStat, Calendar Configuration, Instance Services, Persistence Manager, Project Source, Project Removal, Aspect Control Engine Log, License Item Status, Project Thread Status, Instance 2, Database Management, Licensing, Modem Configuration, Communication Setup, Simple Mobile Web Configuration, System Administration, User Manager, System Services, System Status, Process Status, System Updates, OS Auto-Update, Backup/Restore, Ethernet Settings, **Network Diagnostics**, Time Settings, Web Server Configuration, Image Proxy Configuration, and System Logs. The main panel displays four test sections: **Ping** (Ping Host: [text box], Start Ping Test, Clear Ping Results), **Traceroute** (Traceroute: [text box], Start Traceroute, Clear Traceroute Results), **DNS Test** (Hostname: [text box], Start DNS Test, Clear DNS Results), and **MySQL Test** (Hostname: [text box], Username: [text box], Password: [text box], Database: [text box], Start MySQL Test, Clear MySQL Results).

TIME SETTINGS

The Time Settings area allows users to configure the **NEXUS-3 Series** device Time and Date parameters. In this section, users can set the following items using the appropriate drop-downs and editors:

- System Time - specified in military time
- System Date - specified in MM/DD/YYYY
- TimeZone/Region - specified in one of many configurable options
- Time Server Synchronization - Specifies an NTP time server on the Internet with which to sync the system time (via firewall). Refer to pool.ntp.org for information relative to other available NTP servers available.

The screenshot shows the 'Time/Date Settings' section of the software configuration interface. The left sidebar contains a tree view with the following items: Aspect Control Panel, Instance 1, Application, Users and Groups, Maverick, Mobile, vStat, Calendar Configuration, Instance Services, Persistence Manager, Project Source, Project Removal, Aspect Control Engine Log, License Item Status, Project Thread Status, Instance 2, Database Management, Licensing, Modem Configuration, Communication Setup, Simple Mobile Web Configuration, System Administration, User Manager, System Services, System Status, **Time Settings**, Web Server Configuration, Image Proxy Configuration, and System Logs. The main panel displays the 'Time/Date Settings' section with the following configuration fields: Set System Time (15:49), Set System Date (04/19/2013), Set TimeZone/Region (America/New_York), and Time Server Synchronization (nist1-nj.ustiming.org). Each field has a Submit button.

WEB SERVER CONFIGURATION

The Web Server Configuration area is used to set a label for the login screen and change port settings for the following:

- Aspect Control Panel - defaults to port 80 (HTTP)
- Aspect Control Engine - defaults to port 7226
- Simple Mobile Web - defaults to port 8080

Web Server Configuration

Configure web server settings.

Device Label	Nexus 1.08.03	Submit
Port	80	Submit
AspectFT Control Engine Port	7226	Submit
Simple Mobile Web Port	8080	Submit

IMAGE PROXY CONFIGURATION

The Image Proxy Configuration page permits users to enable or disable image proxy, allowing Aspect to access external sites retrieve graphics.

Image Proxy Access

Use the form to enable or disable image proxy access.

☐ Proxy Enabled
☒ Proxy Disabled

Save

SYSTEM LOGS

The System Logs area provides users with the ability to view and download messages generated by the NEXUS-3 Series device and the Aspect control engine. The System Logs area provides the following logs:

- **Diagnostic Buffer** - provides kernel operating system output for the device. The information shown here is for diagnostic purposes and may be referenced during troubleshooting session with Cylon Controls.
- **Remote Logging** - The Remote Logging page is used to allow or disallow centralized syslog messaging. All Aspect targets support the ability to send their log information to a centralized Aspect target or IT-supported syslog server.
- **System Log** - contains information processed by the sub-level operating system outside of Aspect
- **Update Log** - shows any recent YUM updates in the system.

DIAGNOSTIC BUFFER

The Diagnostic Buffer provides diagnostic information regarding the NEXUS-3 Series device hardware and OS details.

Diagnostic Buffer

View the output of kernel's diagnostic buffer

SYSTEM LOG

The System Log area provides complete syslog information for the hardware. Information provided within this log includes boot up details and lower level information regarding runtime of the system.

UPDATE LOG

The update log shows all recent updates to the operating system.

The screenshot displays the 'Update Log' section of the software configuration interface. On the left is a tree view of the configuration hierarchy, including 'Aspect Control Panel', 'Instance 1', 'Application', 'Users and Groups', 'Maverick', 'Mobile', 'vStat', 'Calendar Configuration', 'Instance Services', 'Persistence Manager', 'Project Source', 'Project Removal', 'Aspect Control Engine Log', 'License Item Status', 'Project Thread Status', 'Instance 2', 'Database Management', 'Licensing', 'Modem Configuration', 'Communication Setup', 'Simple Mobile Web Configuration', 'System Administration', 'System Logs', 'Diagnostic Buffer', 'Remote Logging', 'System Log', and 'Update Log'. The 'Update Log' item is selected. The main panel on the right is titled 'Update Log' and 'View Package Update Logs'. It features a dropdown menu set to 'yum log' and a 'Change' button. Below this is a link to 'Download the update log'. The log itself is a list of update entries, each showing a timestamp, the word 'Updated:', and the package name and version. The entries are as follows:

Timestamp	Update Details
Apr 17 05:17:56	Updated: krb5-libs-1.10.3-10.el6_4.2.x86_64
