ABB Low Voltage Service provides a way to maximize the correct use of the products, giving to customers an easy, quick access to the range of product trainings available. Clients receive the complete list of e-learning, webinars, classroom trainings on application and products relevant to their plant.

ABB training portfolio is vast and covers all customer needs, from a simple introduction of the product to detailed training on specific tools and applications. These programs are achieved through standard classroom trainings, webinars, and e-learnings.

The ABB Power Care portal provides the customers with simplified access to the complete list and schedules.

Standard Classroom trainings allow learning in a safe and dedicated environment, away from the noise and pressures of the work area. Led by an expert trainer, participants learn from one another through group interactions, including sharing of real plant situations and experiences. They are also given the opportunity to have hands-on, practical sessions in the classroom or workshop, to enforce the learning.

ABB completes the training portfolio with Web based webinars and e-learning trainings that provide high quality training programs on demand, without the need to travel. ABB has invested significantly in webinars and e-learning as they are easy and inexpensive way for customers to learn about ABB products. With this infrastructure, learning can take place anywhere an internet connection is available. Participants can attend the lessons at their own pace and test their knowledge improvement step by step.

With the ABB Power Care portal, customers can view the quality educational materials and resources, which are continuously growing and kept current.
