

Product announcement at 16th July 2021

ABB Cylon Range

The below table outlines status changes for the ABB Cylon product series effective 16th July 2021

ABB's Cylon Range is focused on creating value for our stakeholders through our strategic focus on greener buildings.

Although the shift to the newer CBX, CBXi and FBXi controller ranges has continued through the first half of 2021 we are continuing to support our legacy ranges and working to find ways to support legacy field installations and offer suitable replacement products where we have been forced to discontinue products.

We announced in March 2021 that we would be discontinuing some product in the CBM, UCU and UC32.netK in June 2021. We have kept this to a minimum and continue wherever possible to provide a support for all of our product ranges.

Due to pressures on component supply, we also announced the need for a price increase at this time; this is now being deferred and will be notified with a separate announcement.

Following our advance notification in March 2021; the table below outlines products which have been discontinued in July 2021 and, where applicable, the available upgrade or replacement.
