The goal
The aim of this course is to familiarize the participants with the operation and working principle of electromechanical and static relays.

Learning objectives
After this course the participant will be able to:
• Use electromechanical as per requirement
• Proper selection of electromechanical and static relays as per requirement

Participant profile
System engineers and technical personnel who want to learn operation and maintenance of electromechanical and static relays

Prerequisites
Participants shall have good knowledge of protection relays and the electrical network to be controlled.

Topics
• Introduction of electromechanical and static relays
• Working principle and operation of electromechanical and static relays

Course type
This is an instructor led seminar with classroom lectures, demonstrations, application and hands on practice. The language of the course is English.

Laptop or tablet is required to have access to the e-documentation. Please bring your own device.

Duration
The duration of the course is One day.
