Asset Management Services
An enlightened approach to asset management systems.

Effective asset management is more than just managing assets – it’s a holistic and fully-integrated business model.

Maintaining a clean asset register is an important first step in asset management, but how do you move beyond that to the strategic and tactical use of asset data? ABB can help.

ABB’s Asset Management Consulting Practice is now offering training sessions and workshops to help move you further along in your asset management journey. This is not software training; this is knowledge-based business process consulting.

Led by ISO-certified consultants and following a proven methodology, these low-cost, high-value sessions include:
- Asset management overview training
- Asset management health report
- Asset management roadmap
- Asset register health report
- Identifying and quantifying risk
- Capital investment prioritization
- Maintenance strategy optimization

The offerings can be mixed and matched to suit your needs. Each package delivers:
- In-depth training in the topic area
- Quick value, through a hands-on focus on your resources and data
- Ongoing value through skills enhancement and a roadmap for your business

ABB’s Asset Management Services are for any company looking to improve their approach to the business processes, people skills and technologies associated with asset management.

Don’t wait – start your journey today!
