The ABB life cycle management model is designed to manage an orderly transition to new replacement products or to choose from various lifetime extending services. At the same time the model ensures access to continuing support for our customers.

**Current life cycle status**
The ACS6080 (BCU-55) product subtype of ACS6080 product, is in the **Active** life cycle phase according to the ABB life cycle model outlined above.

**Life cycle plan**
There is no plan to change the life cycle status of this product subtype.

ABB will adequately inform about life cycle phase transition from Active to Classic life cycle phase prior to change.

ABB’s promise is to keep this product subtype at least 10 years in Classic life cycle phase after the last unit has been delivered or to provide an Upgrade service to extend the full life cycle support to at least 10 years.

**Recommended actions**
In Active life cycle phase complete life cycle services are available for the mentioned product subtype.

Maintenance recommendations are presented in the ACS6080 preventive maintenance schedule document.

Besides the regular maintenance it is recommended to check the possibility for Option Upgrade service in
order to respond to specific customer needs and/or changed process requirements.

**Product availability in Active life cycle phase**
This product subtype is in active sales and manufacturing phase.

**Service availability in Active life cycle phase**
See details at new.abb.com/drives/Services and contact your local ABB representative for availability.
