266DRH, 266HRH and 266NRH
Pressure transmitters with seals
Measurement made easy
Engineered solutions for all applications

Base accuracy
• from 0.06 % of calibrated span

Reliable sensing system coupled with very latest digital technologies
• provides large turn down ratio up to 60:1

Comprehensive sensor choice
• optimize in-use total performance and stability

Flexible configuration facilities
• provided locally via local LCD keypad

New TTG (Through-The-Glass) keypad technology
• allows quick and easy local configuration without opening the cover, even in explosion proof environments

IEC 61508 certification
• version for SIL2 (1oo1) and SIL3 (1oo2) applications

PED compliance to Sound Engineering Practice (SEP)

All welded constructions
• grant economically feasible and technically sound solutions
• ensuring total reliability at line pressure down to full vacuum

Wide range of seal types, fill fluids, materials and options

Special designed seals for tailored solutions

WirelessHART version
• the battery powered solution compliant to IEC 62591

Best-in-class battery life
• up to 10 years @ 32 s update time
• in-field replaceable

Product in compliance with Directive 2011/65/UE (RoHS II)

In-built advanced diagnostics
**General description**

Models detailed in this data sheet apply for those transmitters which include one or two remote seal(s) connected via a capillary to the transmitter sensor. Depending on the selected ordering code the following models are available:

a) model 266DRH which allows a differential measurement using either
- two remote seals of same type and size
- one direct mount seal on positive side and one remote seal on negative side, of same type and size
- one remote seal on positive side and a standard threaded connection direct 1/4 in – 18 NPT on flange or 1/2 in – 14 NPT through adapter, for the wet or dry leg on negative side opposite to seal, or
- one direct mount seal on positive side and a standard threaded connection direct 1/4 in – 18 NPT on flange or 1/2 in – 14 NPT through adapter, for the wet or dry leg on negative side.

b) model 266HRH or 266NRH have the remote or direct mount seal on the positive side and the user can select the suitable code for having the reference at atmospheric or vacuum pressure respectively for gauge or absolute measure. Direct mount seal is integral to the transducer by a short capillary connection inside a protective rigid tube. This construction forms a standalone single assembly suitable to be mounted to the process by the seal(s) mounting facilities. All data apply for identical characteristics of the two sides when the transmitter is differential with two seals.

**Remote Seals Overview**

The S26 seals are used in combination with 2600T transmitters, allowing differential, gauge or absolute pressure measurements. Connection of the seal(s) to the relevant transmitter can be achieved as follows:

- directly mounted with a short capillary connecting the „integral” seal to the transmitter sensor;
- through a capillary system which link the transmitter sensor to a „remote” seal of any version.

Using seals the transmitter can be selected with

- two seals using same fill fluid, capillary and diaphragm size
- one seal having the other side configured with a process flange for wet/dry leg connection or a blind flange providing vacuum or atmospheric reference.

Model 266HRH/NRH transmitters have always one remote seal only, with a selectable reference to atmosphere or vacuum respectively for gauge or absolute pressure measurements.

The S26 Series Seal System is a protective device used to isolate 2600T series transmitters from the process fluid. The seal system provides a flexible diaphragm seal between the process fluid and a liquid filled capillary tube connected to the body of the transmitter. The diaphragm isolates the process fluid while the filled capillary tube hydraulically transmits the process pressure to the transmitter sensor. The capillary of remote seal is corrosion-resistant with robust construction in stainless steel with spiral armour protection, also PVC jacket; PVC protection is always recommended except for high temperature application, where stainless steel armour is suggested. The all welded construction assures reliable operation over the widest range of operating temperature and under vacuum conditions. For certain applications, use of seal is necessary to prevent the process fluid from leaving its enclosure, due to reasons such as:

- the process fluid has solids in suspension or is highly viscous and can foul impulse lines.
- the process fluid can solidify in impulse lines or the transmitter.
- the process fluid is too hazardous to enter the control area where the transmitter is located.
- the process temperature exceeds the recommended limits for the transmitter.
- the application is interface level or density measurement.
- the transmitter must be located away from the process for easier maintenance.

Remote seals offer the required constant and equal specific gravity of the pressure transfer fluid on the high and low sides of the transmitter. The S26 series is available with process connections for ASME, EN or JIS pipe flanges, wedge flow elements, chemical tees, and threaded pipe fittings. Extended diaphragm remote seals, suitable for connection to 2 in, 3 in or 4 in flanged tank nozzles or flanged tees, permit the seal diaphragm to be located flush with the inside of a tank or pipe. Sanitary type seals meet the stringent requirements of sanitary food, dairy, pharmaceutical and BioTech applications, offering FDA approved fillings and compliance with 3-A Sanitary Standards. Fill fluids with FDA are defined as food fills and are Generally Recognized As Safe (GRAS) by the US Food and Drug Administration (FDA).
---

**Seal system selection criteria**

Application of an S26 system in direct mount or remote seal configuration to 2600T transmitters affects performances of original devices. Effects are evident in:

- accuracy
- temperature effects
- dynamic response

Accuracy is only marginally affected when seal diaphragm stiffness is relevant compared with sensor stiffness. This is the only characteristic of the S26 system which has role on accuracy performance. High stiffness of diaphragm associated with low URL might produce increased errors of linearity, hysteresis, and long term stability; when diaphragm stiffness is accuracy related also temperature effects are significantly affected.

Some basic considerations on diaphragm stiffness help understanding effects introduced by S26 system associated with transmitters. This is physically defined by the ratio between the pressure variation applied to the diaphragm and the corresponding volume variation. The stiffness is not linear along the whole diaphragm volumetric displacement, but the S26 design is such to maintain the system linear within the service conditions of the transmitter such as:

- operating pressure range
- operating static pressure (for differential transmitters)
- ambient and process temperature limits

Diaphragm stiffness is a function of material and thickness (elastic coefficient), diameter (type), convolution shape and geometry (design defined).

S26 system has effect on temperature performance of the complete transmitter. This effect is mostly on zero of the instrument and is produced by the expansion of the fill fluid into the closed volume formed by the transmitter flange cavity the capillary volume and the remote seal volume. This volume filled with a fluid with specific expansion coefficient; change in temperature of the measuring device produce a volume variation which is absorb by the remote diaphragm, whose stiffness produces a change in the fluid pressure: this is the zero error. In real application the transmitter/ seal system is not the same and stable temperature. Therefore the errors referred in this document for each type of diaphragm and different fluids should be taken as a reference for qualitatively evaluation and not a true behaviour in normal application conditions. Should again be recognized that the stiffness of diaphragm and in this case, the thermal coefficient of fluid are the parameter to take into account.

Application of S26 seal to transmitters increases the original time response. The amount of the increase depends from the number of elements and condition of the instrument as follow:

- transmitter sensor range
- physical configuration (i.e. a remote seal on other side)
- type of measure/number of seal (one or two)
- fill fluid viscosity of the S26 system applied
- ambient temperature (affects the transmitter and the capillary) and process temperature on the seal diaphragm
- capillary length

The delay introduced by the seal may be considered as an added constant time to the one of the associated transmitter. For obtaining the best application solution:

- choose sensor code with URL closest to application SPAN
- select largest diameter diaphragm seal related to URL.
- keep the capillary length as short as possible
- select the fill fluid that suits the most extreme process conditions expected (highest temperature and lowest pressure) and it is compatible with the process fluid.
- In vacuum application, choose always the all welded version and mount the transmitter primary 30 cm/12 inches or more below the bottom seal connection.
- In a two-seal system use the same diaphragm size, capillary length and fill fluid on each side of the transmitter

**Temperature errors optimization (option code DE)**

Additional enhanced optimization performed during the production process allows to reduce errors caused by temperature changes on seal. Values detailed in relevant tables can be considered divided by 4 for the following conditions:

- difference of capillary errors (per metre) when the two sides have different lengths
- difference of seal errors (process) when the two sides are equipped with different S26 types
- difference of system errors (ambient) when the transmitter uses one direct mount seal and one remote seal.

**Ordering Information**

The transmitter and each seal system are each identified by a product code number. These code numbers are stamped on the transmitter nameplate and each character identifies specific product features. Refer to ordering information for a detailed explanation of the product code numbers.

Industrial application in chemical, sanitary, food and any other process industries may require seal configurations and/or process connection different from those reported in this document. Each “special” should be evaluated by ABB to check the correctness and its level of functionality. Ask for the “S26 series seal form” to define precisely the measuring problem and application requirements.

ABB can also cooperate with you by developing a special remote seal for problems requiring individual solutions.

**PLEASE CONTACT YOUR LOCAL ABB OFFICE OR REPRESENTATIVE FOR ADDITIONAL INFORMATION, SPECIFIC SEAL DATA AND APPLICABILITY.**
The following table shows the types of seals available as remote. According to the combination SEAL/TRANSMITTER SENSOR the table details the MAXIMUM CAPILLARY LENGTH. The mnemonics will be used as shortest cross references in the following pages of the data sheet.

Span limits

- Maximum span = URL
- IT IS RECOMMENDED TO SELECT THE TRANSMITTER SENSOR CODE PROVIDING THE TURNDOWN VALUE AS LOWEST AS POSSIBLE TO OPTIMIZE PERFORMANCE CHARACTERISTICS.

Zero suppression and elevation

- Zero and span can be adjusted to any value within the range limits detailed in the table as long as:
  - calibrated span ≥ minimum span

Damping (feature not available for WirelessHART version)

- Selectable time constant : between 0 and 60 s
- This is in addition to sensor response time.

Turn on time

- Operation within specification in less than 10 s with minimum damping.

Insulation resistance

- > 100 MΩ at 500 V DC (terminals to earth)

#### Temperature limits °C (°F)

**Ambient**

- Silicone oil for sensor F to S: -40 and 85°C (-40 and 185°F)
- Silicone oil for sensor B and E: -25 and 85°C (-13 and 185°F)
- Inert (Galden) for sensor F to S: -20 and 85°C (-4 and 185°F)
- Inert (Galden) for sensor E: -10 and 85°C (14 and 185°F)

**Process**

- Silicone oil for sensor F to S: -40 and 121°C (-40 and 250°F) *
- Silicone oil for sensor B and E: -25 and 121°C (-13 and 250°F) *
- Inert (Galden) for sensor F to S: -20 and 100°C (-4 and 212°F) **
- Inert (Galden) for sensor E: -10 and 100°C (14 and 212°F) **
- Viton gasket: -20 and 121°C (-4 and 250°F)

* 100°C (212°F) for application below atmospheric pressure
** 65°C (150°F) for application below atmospheric pressure

**Vacuum service for seals**

- Full vacuum subject to fill fluid limits.
- Refer to FILL FLUID CHARACTERISTICS table.
- Minimum pressure with seal tantalum diaphragm is 1 kPa abs, 10 mbar abs, 0.15 psia.
Process - seal

Refer to the following FILL FLUID CHARACTERISTICS table detailing characteristics of fill fluids when used in transmitters with seal(s) and further limitation for specific models and/or variants.

...Specification – operative limits

Environmental limits

Electromagnetic compatibility (EMC)
- Comply with 2014/30/UE to standards EN 61326-1:2013.
- For IEC 61508 SIL certified transmitter to EN 61326-3-1:2008.
- For transmitter with option "YE" to NAMUR NE 021 (2004).
- Surge immunity level (with surge protector): 4 kV (according to IEC 61000-4–5 EN 61000–4–5)

Pressure equipment directive (PED)
- Comply with 2014/68/UE to standards ANSI/ISA 61010-1:2012
- Category III Module H for PS ≥ than 20 MPa, 200 bar
- Sound Engineering Practice (SEP) for PS < 20 MPa, 200 bar

Humidity
- Relative humidity: up to 100 %
- Condensing, icing: admissible

Vibration resistance
- Accelerations up to 2 g at frequency up to 1000 Hz (according to IEC 60068–2–6)

Shock resistance
- Acceleration: 50 g
- Duration: 11 ms (according to IEC 60068–2–27)

Wet and dust-laden atmospheres
- The transmitter is dust and sand tight and protected against immersion effects as defined by IEC 60529 (2001) to IP 67 (IP 68 on request) or by NEMA Type 4X.
- IP65 with Harting Han connector.
- Aluminium and AISI housings as barrel version also comply to IP 66 as defined by IEC 60529 (2001).

Vibration resistance
- Accelerations up to 2 g at frequency up to 1000 Hz (according to IEC 60068–2–6)

Shock resistance
- Acceleration: 50 g
- Duration: 11 ms (according to IEC 60068–2–27)

Wet and dust-laden atmospheres
- The transmitter is dust and sand tight and protected against immersion effects as defined by IEC 60529 (2001) to IP 67 (IP 68 on request) or by NEMA Type 4X.
- IP65 with Harting Han connector.
- Aluminium and AISI housings as barrel version also comply to IP 66 as defined by IEC 60529 (2001).
Hazardous atmospheres
(FOR ALL VERSIONS EXCEPT WirelessHART)
With or without integral display
INTRINSIC SAFETY Ex ia:
• ATEX Europe (code E1) approval

  Class I, Zone 0 AEx ia IIC T6...T4 (US)
  Class I, Zone 0 Ex ia IIC T6...T4 (Canada)
Type 4X, IP66, IP67 for all above markings.

IMPORTANT
REFER TO CERTIFICATES FOR AMBIENT TEMPERATURE
RANGES RELATED TO THE DIFFERENT TEMPERATURE
CLASSES.
HIGH STATIC VERSION IS NOT IN COMPLIANCE WITH
ISA 12.27.01 FOR SEALING REQUIREMENTS, SPECIFICALLY
FOR FM APPROVAL (Canada).
### Specification - Electrical Characteristics and Options

#### Optional indicators

**Integrated digital display**
  (code LS; only with HART standard functionality)
  - Wide screen LCD, 128 x 64 pixel, 52.5 x 27.2 mm (2.06 x 1.07 in.) dot matrix.
  - Two keys for zero/span or without keypad.
  - User selectable application-specific visualizations.
  - Display may also indicate static pressure, sensor temperature and diagnostic messages.

**Integral display with integral keypad**
  (code L1; not with HART standard functionality)
  - Wide screen LCD, 128 x 64 pixel, 52.5 x 27.2 mm (2.06 x 1.07 in.) dot matrix.
  - Multilanguage. Four keys for configuration and management of device.
  - Easy setup for quick commissioning.
  - User selectable application-specific visualizations.
  - Display may also indicate static pressure, sensor temperature and diagnostic messages.

**Integral display with Through-The-Glass (TTG) activated keypad**
  (code LS; not with HART standard functionality)
  - As above integral display but equipped with the innovative TTG keypad allowing the activation of the configuration and management menus of the device without the need of removing the transmitter housing cover. TTG keypad is protected against accidental activations.

**Optional surge protection**
  - Up to 4kV
    - voltage 1.2 µs rise time / 50 µs delay time to half value
    - current 8 µs rise time / 20 µs delay time to half value

#### HART® digital communication and 4 to 20 mA output – Standard and Advanced functionality

**Device type:** 1a06hex (listed with HCF)

**Power supply**
  - The transmitter operates from 10.5 to 42 V DC with no load and is protected against reverse polarity connection (additional load allows operations over 42 V DC).
  - For Ex ia and other intrinsically safe approval power supply must not exceed 30 V DC. Minimum operating voltage increases to 12.3 V DC with optional surge protector or to 10.8 V DC with optional conformity to NAMUR NE 21 (2004).

**Ripple**
  - 20 mV max on a 250 Ω load as per HART specifications.

**Load limitations**
  - 4 to 20 mA and HART total loop resistance :
    \[ R (\text{kΩ}) = \frac{\text{Supply voltage – min. operating voltage (V DC)}}{22 \text{ mA}} \]
  - A minimum of 250 Ω is required for HART communication.

**Output signal**
  - Two–wire 4 to 20 mA, user-selectable for linear or square root output, power of \( \frac{3}{2} \) or \( \frac{5}{2} \), square root for bidirectional flow, 22 points linearization table (i.e. for horizontal or spherical tank level measurement). HART® communication provides digital process variable superimposed on 4 to 20 mA signal, with protocol based on Bell 202 FSK standard.
  - HART revision 7 is the default HART output.
  - HART revision 5 is selectable on request.

**Output current limits (to NAMUR NE 43 standard)**
  - **Overload condition**
    - Lower limit: 3.8 mA (configurable from 3.8 to 4 mA)
    - Upper limit: 20.5 mA (configurable from 20 to 21 mA)
  - **Alarm current**
    - Lower limit: 3.6 mA (configurable from 3.6 to 4 mA)
    - Upper limit: 21 mA (configurable from 20 to 23 mA, limited to 22 mA for HART Safety; apply for electronics release 7.1.15 or later)
  - Factory setting: high alarm current.

**Process diagnostics (PILD)**
  - Plugged impulse line detection (PILD) generates a warning via communication (HART, PA, FF). The device can be configured to drive the output to “Alarm current” or set a status “BAD”.
IEC 62591 WirelessHART® output

Device type: 1a06hex (listed with HCF)
Network ID: ABBhex (2747 decimal)
Join keys: 57495245hex (1464422981) 4c455353hex (1279611731) 4649454chex (1179206988) 444b4559hex (1145783641).

Power Supply
1x D-cell size lithium-thionyl chloride battery.
Battery life: 10 years at 32 sec. update time, 8 years at 16 sec. update time or 5 years at 8 sec. update time.
(at reference conditions of 25 ± 2 °C ambient temperature, data routed from 3 additional devices, LCD off).
THE BATTERY CAN BE REPLACED IN FIELD, ALSO IN HAZARDOUS CLASSIFIED AREA.

Output signal
IEC 62591 WirelessHART Version 7.5 (IEEE 802.15.4-2006);
Frequency band: 2.4 GHz DSSS
Update rate: user selectable from 1 sec. to 60 min.

Integrated adjustable omnidirectional antenna
- Output radio frequency: maximum 10 mW (10 dBm) EIRP
- Range: up to 300 m. (328 yds.)
Minimum distance between antenna and person is 0.2 m. (8 in.)

Telecommunications directive
Every wireless measuring device must be certified in accordance with the telecommunications directive, in this case the frequency range. This certification is country-specific.

European directives
In Europe, use of the 2400 - 2483.5 MHz frequency band is not harmonized. Country-specific regulations must be observed.

Restrictions for Norway
Operation not permitted within a radius of 20 km around Ny-Alesund in Svalbard. For more information, see www.npt.no Norway Posts and Telecommunications site

Extra-european radio frequency licences
USA to FCC Part 15.247:2009;
Canada to IC RSS-210 and ICES-003;
Argentina; United Arab Emirates (UAE); India; Mexico.

PROFIBUS® PA output

Device type
Pressure transmitter compliant to Profiles 3.0.1
Identification number: 3450 (hex)

Power Supply
The transmitter operates from 9 to 32 V DC , polarity independent, with or without surge protector.
For Ex ia approval power supply must not exceed 17.5 V DC.
Intrinsic safety installation according to FISCO model.

Current consumption
operating (quiescent): 15 mA
fault current limiting: 20 mA max.

Output signal
Physical layer in compliance to IEC 1158–2/EN 61158–2 with transmission to Manchester II modulation, at 31.25 kbit/s.

Output interface
PROFIBUS PA communication according to Profibus DP50170 Part 2/DIN 19245 part 1–3.

Output update time
25 ms

Data blocks
3 analog input, 1 physical.

Additional blocks
1 Pressure with calibration transducer block
1 Advanced Diagnostics transducer block including Plugged Input Line Detection
1 Local Display transducer block

Transmitter failure mode
On gross transmitter failure condition, detected by self-diagnostics, the output signal can be driven to defined conditions, selectable by the user as safe, last valid or calculated value.
If electronic failure or short circuit occur the transmitter consumption is electronically limited at a defined value (20 mA approx), for safety of the network.
Specification - Electrical Characteristics and Options

FOUNDATION Fieldbus™ output

Device type
- LINK MASTER DEVICE
- Link Active Scheduler (LAS) capability implemented.
  Manufacturer code: 000320hex
  Device type code: 0007hex

Power supply
The transmitter operates from 9 to 32 V DC, polarity independent, with or without surge protector.
For Ex ia approval power supply must not exceed 24 V DC (FF–816 certification) or 17.5 V DC (FISCO certification).

Current consumption
- operating (quiescent): 15 mA
- fault current limiting: 20 mA max.

Output signal
- Physical layer in compliance to IEC 61158–2/EN 61158–2.
- Transmission to Manchester II modulation, at 31.25 kbit/s.

Function blocks/execution period
- 3 enhanced Analog Input blocks/25 ms max (each)
- 1 enhanced PID block/40 ms max.
- 1 standard ARithmetic block/25 ms
- 1 standard Input Selector block/25 ms
- 1 standard Control Selector block/25 ms
- 1 standard Signal Characterization block/25 ms
- 1 standard Integrator/Totalizer block/25 ms

Additional blocks
- 1 enhanced Resource block,
- 1 custom Pressure with calibration transducer block
- 1 custom Advanced Diagnostics transducer block including Plugged Input Line Detection
- 1 custom Local Display transducer block

Number of link objects
35

Number of VCRs
35

Output interface
- FOUNDATION fieldbus digital communication protocol to standard H1, compliant to specification V.1.7.

Transmitter failure mode
The output signal is “frozen” to the last valid value on gross transmitter failure condition, detected by self-diagnostics which also indicate a BAD conditions. If electronic failure or short circuit occur the transmitter consumption is electronically limited at a defined value (20 mA approx), for safety of the network.
### Specification – performance

Stated at reference condition to IEC 60770 ambient temperature of 20 °C (68 °F), relative humidity of 65 %, atmospheric pressure of 1013 hPa (1013 mbar), mounting position with vertical diaphragm and zero based range for transmitter with isolating diaphragms in AISI 316 L ss or Hastelloy and silicone oil fill and HART digital trim values equal to 4 mA and to 20 mA span end points, in linear mode.

Unless otherwise specified, errors are quoted as % of span.

Some performance referring to the Upper Range Limit are affected by the actual turndown (TD) as ratio between Upper Range Limit (URL) and calibrated span.

**IT IS RECOMMENDED TO SELECT THE TRANSMITTER SENSOR CODE PROVIDING THE TURNDOWN VALUE AS LOWEST AS POSSIBLE TO OPTIMIZE PERFORMANCE CHARACTERISTICS.**

### Accuracy rating

% of calibrated span, including combined effects of terminal based linearity, hysteresis and repeatability.

For fieldbus versions SPAN refer to analog input function block outscale range

Refer to S26 Seals Errors in Next Pages for Temperature Additional Effects of Remote/ Direct Mount Seal(s)

Static pressure
(zero errors can be calibrated out at line pressure)
per 2 MPa, 20 bar or 290 psi for all sensors except B
with remote seal(s)
- zero error: ±0.25% of URL
- span error: ±0.25% of reading
  with direct mount seal only
- zero error: ±0.15% of URL
- span error: ±0.15% of reading
  with direct mount plus remote seal
- zero error: ±0.20% of URL
- span error: ±0.20% of reading
per 2 MPa, 20 bar or 290 psi for sensor B only
with remote seal(s) or with direct mount plus remote seal
- zero error: ±0.30% of URL
- span error: ±0.30% of reading
Model 266DRH with direct mount seal only
- zero error: ±0.25% of URL
- span error: ±0.25% of reading

Supply voltage
Within voltage/load specified limits the total effect is less than 0.005 % of URL per volt.

Load
Within load/voltage specified limits the total effect is negligible.

Electromagnetic field
Meets all the requirements of EN 61326 for surge immunity level (of NAMUR NE 21 on request).

Common mode interference
No effect from 100Vrms @ 50Hz, or 50 V DC
Seals temperature effects

The following table shows temperature effect per 20 K (36 °F) change, detailed separately for
- the seal (one element), as process temperature error
- the capillary per meter
- the system (transmitter sensor when combined with a seal of specific size/type, either direct mount or remote)

referred to silicone oil (PMX 200) filling and AISI 316 L ss diaphragm materials.

For filling different from silicone oil (PMX 200) the errors can be multiplied by ratio between the thermal expansion coefficients of the selected filling divided by the one of PMX 200, listed in the fill fluid characteristics table.

The errors in table can be considered divided by 4 for transmitters using same remote seal on the two sides.

**Specification – physical**

(Refer to ordering information pages for variant availability related to specific model or versions code)

---

**Model 266DRH only - materials of side without seal**

Process isolating diaphragms (*)
- AISI 316 L ss; Hastelloy® C-276; Monel 400®; Tantalum.
- A remote seal can be selected with required diaphragm material (refer to high pressure side).

Process flanges, adapters, plugs and drain/vent valves (*)
- AISI 316 L ss (1); Hastelloy® C-276 (2); Monel 400® (3).

Bolts and nuts
- AISI 316 ss bolts Class A4–80 and nuts Class A4-70 per ISO 3506;
- AISI 316 ss bolts and nuts Class A4–50 per ISO 3506, in compliance with NACE MR0175 Class II (std. static only).
- Stainless steel per ASTM-A-453 grade 660D, in compliance with NACE MR0175 Class II (high static only).

Gaskets (*)
- Viton®; PTFE.

---

**Model 266DRH, 266HRH, 266NRH materials**

Seal side process diaphragm (remote/direct mount seal) (*)
- AISI 316 L ss; Hastelloy® C-276; Hastelloy® C-2000; Inconel 625; Tantalum; AISI 316 L ss gold plated;
- AISI 316 L ss or Hastelloy® C-276 with anti-stick coating;
- AISI 316 L ss with anti-corrosion coating;
- Superduplex ss (UNS S32750 to ASTM SA479);
- Diaplex (AISI with anti-abrasion treatment).

Extension material (*)
- AISI 316 L ss (also for Diaplex and gold plated diaphragms);
- Hastelloy® C-276; AISI 316 L ss or Hastelloy® C-276 with coating same as diaphragm

Seal side fill fluid
- Silicone oil-PMX 200®; Silicone oil for high temperature;
- Low viscosity silicone oil-Baysilone® M5; Inert-Galden®;
- Silicone Polymer-Syltherm XLT®; Glycerin Water;
- Vegetable oil-Neobee® M-20; Mineral oil-Esso Marcol 152®.

---

Electronic housing and covers
- Aluminium alloy (copper content \(\leq 0.3\%\)) with baked epoxy finish (colour RAL9002); AISI 316 L ss.

Covers O-ring
- Buna N.

Local adjustments (zero, span and write protect)
- For Standard HART version:
  - Internal for zero and span (on connection board)
  - External non-intrusive for zero, span and write protect in glass filled polyphenylene oxide, removable (code R1).
- For all other versions:
  - External non-intrusive for zero, span and write protect in glass filled polyphenylene oxide, removable.

Plates
- Transmitter nameplate: AISI 316 ss screwed to the electronics housing.
- Certification plate and optional tag/calibration plate: self-adhesive attached to the electronics housing or AISI 316 ss fastened to the electronics housing with rivets or screws.
- Optional wired-on customer data plate: AISI 316 ss.
- Laser printing on metal or thermal printing on self-adhesive.
- For AISI 316 L ss housing it is mandatory to select option I2 or I3 for plates in AISI 316 ss.

Calibration
- Standard: at maximum span, zero based range, ambient temperature and pressure;
- Optional: at specified range and ambient conditions.
- Device is delivered with a standard 4-point calibration record.

---

(*) Wetted parts of the transmitter.

(**) U-bolt material: high-strength alloy steel or AISI 316 L ss; bolts/nuts material: high-strength alloy steel or AISI 316 ss.

(1) Supplied as AISI 316 L or as ASTM A351 Grade CF-3M

(2) Supplied as Hastelloy C-276 or as ASTM A494 alloy CW-12MW

(3) Supplied as Monel 400 or as ASTM A494 Grade M-35-1
...Specification – physical

Optional extras

Mounting brackets (code Bx)
For vertical and horizontal 60mm. (2in) pipes or wall mounting.

Display (code Lx)
4-position (at 90°) user orientable, except “LS”.

Optional plates (code Ix)

Code I2: AISI 316 ss plate with laser printed tag (up to 32 characters - long) and calibration details (up to 31 characters: lower and upper range values and engineering unit) fixed onto transmitter housing.
Code I1: AISI 316 ss wired-on plate with laser printed customized data (4 lines of 32 characters with 4 mm/0.16 in. height).

Surge protection (code S2)

Test Certificates (test, design, calibration, material traceability) (codes Cx and Hx)

Tag and manual language (codes Tx and Mx)

Process connections 266DRH only - side without seal

on conventional flanges: 1/4 in. – 18 NPT on process axis
on adapters: 1/2 in. – 14 NPT on process axis
fixing threads: 7/16 in. – 20 UNF at 41.3mm centre distance

Refer to S26 pages for process connection variants through diaphragm seal.

Gasket seat finish for seals
Smooth (polished finish for ASME or EN): 0.8 μm (Ra)
Serrated (to ASME 16.5 flange standard): 3.2 to 6.3 μm (Ra)
Serrated (to EN 1092-1 Type B1): 3.2 to 12.5 μm (Ra)
Serrated (to EN 1092-1 Type D and E): according to standard

(*) Bolts and nuts, gasket and mating flange supplied by customer.

Electrical connections

Two 1/2 in. – 14 NPT or M20x1.5 threaded conduit entries, direct on housing. Only M20x1.5 for WirelessHART with one port used for antenna.
One certified stainless steel plug (supplied loose with thread according to housing entries) available as option.

Terminal block
HART version: three terminals for signal/external meter wiring up to 2.5 mm² (14 AWG), also connection points for test and communication purposes.
WirelessHART version: connection points for test and communication purposes; additional fast connection for external harvesting unit.
Fieldbus versions: two terminals for signal wiring (bus connection) up to 2.5 mm² (14 AWG)

Grounding
Internal and external 6 mm² (10 AWG) ground termination points are provided.

Mounting position
Transmitter can be mounted in any position. Electronics housing may be rotated to any position. A positive stop prevents over travel.

Mass (without options and seals)
models 266DRH: 4 kg approx (8.8 lb)
models 266HRH, 266NRH: 2 kg approx (4.4 lb)
Add 1.5 kg (3.4 lb) for AISI housing.
Add 650 g (1.5 lb) for packing.
Consider additional weight up to 50 kg (up to 110 lb) for seals.

Packing
Carton.
Specification – configuration

Transmitter with HART communication and 4 to 20 mA

Standard configuration
Transmitters are factory calibrated to customer’s specified range. Calibrated range and tag number are stamped on the tag plate. If a calibration range and tag data are not specified, the transmitter will be supplied with the plate left blank and configured as follows:

- **Engineering Unit**: kPa
- **4 mA** Zero
- **20 mA** Upper Range Limit (URL)
- **Output** Linear
- **Damping** 1 s
- **Transmitter failure mode**: Upscale
- **Tag**: Blank (up to 32 alphanumeric characters - long; only 8 visible on display - short)
- **Optional LCD display**: PV in kPa; output in mA and in percentage on bargraph

Any or all the above configurable parameters, including Lower range–value and Upper range-value which must be the same unit of measure, can be easily changed using the HART hand-held communicator or by a PC running the configuration software with DTM for 266 models. The transmitter database is customized with specified flange type and material, O–ring and drain/vent materials and meter code option.

Custom configuration (option N6)
The following data may be specified in addition to the standard configuration parameters:

- **Descriptor**: 16 alphanumeric characters
- **Message**: 32 alphanumeric characters
- **Date**: Day, month, year

For HART protocol available engineering units of pressure measure are:
- Pa, kPa, MPa
- inH2O@4 °C, mmH2O@4 °C, psi
- inH2O@68 °F, ftH2O@68 °F, mmH2O@68 °F
- inHg, mmHg, Torr
- g/cm², kg/cm², atm
- mbar, bar

These and others are available for PROFIBUS and FOUNDATION Fieldbus.

Transmitter with WirelessHART communication

Standard configuration
Transmitters are factory calibrated to customer’s specified range. Calibrated range and tag number are stamped on the tag plate. If a calibration range and tag data are not specified, the transmitter will be supplied with the plate left blank and configured as follows:

- **Engineering Unit**: kPa
- **Output scale 0 %** Lower Range Limit (LRL)
- **Output scale 100 %** Upper Range Limit (URL)
- **Output** Linear
- **Update time**: 16 s
- **Tag**: Blank (up to 32 alphanumeric characters - long; only 8 visible on display - short)
- **Optional LCD display**: PV in kPa; output in percentage on bargraph

Any or all the above configurable parameters, including Lower range–value and Upper range-value which must be the same unit of measure, can be easily changed using the HART hand-held communicator or by a PC running the configuration software with DTM for 266 models. The transmitter database is customized with specified flange type and material, O–ring and drain/vent materials and meter code option.

Custom configuration (option N6)
The following data may be specified in addition to the standard configuration parameters:

- **Descriptor**: 16 alphanumeric characters
- **Message**: 32 alphanumeric characters
- **Date**: Day, month, year
...Specification – configuration

Transmitter with PROFIBUS PA communication

Standard configuration

Transmitters are factory calibrated to customer’s specified range. Calibrated range and tag number are stamped on the tag plate. If a calibration range and tag data are not specified, the transmitter will be supplied with the plate left blank and configured as follows:

Measure Profile: Pressure
Engineering Unit: kPa
Output scale 0 %: Lower Range Limit (LRL)
Output scale 100 %: Upper Range Limit (URL)
Output: Linear
Hi-Hi Limit: Upper Range Limit (URL)
Hi Limit: Upper Range Limit (URL)
Low Limit: Lower Range Limit (LRL)
Low-Low Limit: Lower Range Limit (LRL)
Limits hysteresis: 0.5 % of output scale
PV filter: 0 s
Address (set by local key): 126
Tag: PI000 (up to 32 alphanumeric characters; only 8 visible on display)
Optional LCD display: PV in kPa; output in percentage on bargraph

Any or all the above configurable parameters, including the range values which must be the same unit of measure, can be easily changed by a PC running the configuration software with DTM for 266 models. The transmitter database is customized with specified flange type and material, O–ring and drain/vent materials and meter code option.

Custom configuration (option N6)

The following data may be specified in addition to the standard configuration parameters:

- Descriptor: 32 alphanumeric characters
- Message: 32 alphanumeric characters
- Date: Day, month, year

Transmitter with FOUNDATION Fieldbus communication

Standard configuration

Transmitters are factory calibrated to customer’s specified range. Calibrated range and tag number are stamped on the tag plate. If a calibration range and tag data are not specified, the transmitter will be supplied with the plate left blank and the analog input function block FB1 is configured as follows:

Measure Profile: Pressure
Engineering Unit: kPa
Output scale 0 %: Lower Range Limit (LRL)
Output scale 100 %: Upper Range Limit (URL)
Output: Linear
Hi-Hi Limit: Upper Range Limit (URL)
Hi Limit: Upper Range Limit (URL)
Low Limit: Lower Range Limit (LRL)
Low-Low Limit: Lower Range Limit (LRL)
Limits hysteresis: 0.5 % of output scale
PV filter time: 0 s
Tag: PI000 (up to 32 alphanumeric characters; only 8 visible on display)
Optional LCD display: PV in kPa; output in percentage on bargraph

The analog input function block FB2 and FB3 are configured respectively for the sensor temperature measured in °C and for the static pressure measured in MPa.

Any or all the above configurable parameters, including the range values, can be changed using any host compliant to FOUNDATION fieldbus. The transmitter database is customized with specified flange type and material, O–ring and drain/vent materials and meter code option.

Custom configuration (option N6)

The following data may be specified in addition to the standard configuration parameters:

- Descriptor: 32 alphanumeric characters
- Message: 32 alphanumeric characters
- Date: Day, month, year
Dimensions
(not for construction unless certified) – dimensions in mm. (in.)

NOTE
For 266DRH using one seal only, the threaded connection (1/4 in. – 18 NPT direct or 1/2 in. – 14 NPT through adapter) of conventional flange, gasket groove and gaskets are in accordance with IEC 61518.

Bolting threads for fixing adapter or other devices (i.e. manifold etc.) on process flange is 7/16 – 20 UNF.

Negative side of gauge measurement version 266DSHxP is provided with a removable filter, granting protection to the atmospheric pressure reference.

The S26WA and S26WE wafer remote seals are designed to be clamped between two ASME or EN raised face flanges. The diaphragm side of the seal faces the process flange and a blind back-up flange is used on the other side of the seal.

Dimensions

The S26CN chemical tee remote seal is designed to connect to a Wedge Flow Element or to any process fitting with appropriate mating condition. Chemical tee elements cannot be connected to a standard ASME pipe flange.
The S26BN remote seals are designed to connect directly to a process pipe via the NPT threaded connection or to match pipe fitting with an interface suitable for the provided mating flange. The button seals, due to their design, are dedicated for measurement with medium/high calibrated span (2 MPA/20 bar/290 psi approx. or greater).

Figure 71  S26BN Model Button type remote diaphragm seal Bracket – type 89
The union connection remote seals model S26BN are used exclusively for pressure measurement with gauge pressure transmitter.

The seal is available with an optional weld bushing, or with an optional chemical tee flange. The remote seal with a weld bushing, includes a bushing which provides the mating surface for the seal element. The union connection seal with a chemical tee flange, is designed to connect to any process fitting which accepts a chemical tee seal element (refer to Chemical Tee Seal for more information). The union seal connects to the chemical tee flange which serves as an adaptor to permit connection of the union seal to a chemical tee type fitting.

Electrical connections

HART hand-held communicator may be connected at any wiring termination point in the loop, providing the minimum resistance is 250 ohm. If this is less than 250 ohm, additional resistance should be added to allow communications. Maximum voltage drop on external remote indicator is 0.7 V DC.

### Electrical connection plug

- One certified stainless steel plug (supplied loose with thread according to housing entries) | Z1 |

---

Notes:

- Note 1: Suitable for oxygen service
- Note 2: Not wetted – Hastelloy C276 on AISI seat for sensor code B
- Note 3: Not available with sensor code B
- Note 5: Not available with low side diaphragm code R, 2, W
- Note 6: Not available with diaphragm material/fill fluid code S, A, L
- Note 7: Not available with Process flanges/adapters code D, E, G, H, R
- Note 8: Not available with Process flanges/adapters code A, B, G, H, R
- Note 9: Not available with Process flanges/adapters code A, B, D, E, R
- Note 10: Not available with Housing code J
- Note 11: Not available with high static pressure code H
- Note 12: Not available with Output code 7
- Note 13: Not available with Housing code A, 5, J
- Note 14: Not available with Output code 9
- Note 15: Not available with Output code 1, 2, 3, 7, 8
- Note 16: Not available with Output code 2, 3
- Note 17: Not available with Hazardous area certification code WM, WN, WP
- Note 18: Not available with Hazardous area certification code EN, E4, E6, EA, EY, EZ, ES, W1, W2, WC, W3, W4, WD, W5, W6, W7, W8, WF, WG, WH, WM, WN, WP
- Note 19: Not available with Application code P (gauge measurement)
- Note 20: Not available with Output code 2, 3, 9

### Standard delivery items (can be differently specified by additional ordering code)

- Adapter supplied loose
- Plug on axis of horizontal connection flange
- General purpose (no electrical certification)
- No display, no mounting bracket, no surge protection
- Short-form leaflet instruction and labels in English (metal nameplate; self-adhesive certification and tag)
- Configuration with kPa and deg. C units
- No test, inspection or material traceability certificates
...Ordering Information

Basic ordering information for model 266HRH Gauge Pressure Transmitter with remote seal
Select one character or set of characters from each category and specify complete catalog number.
Refer to additional ordering information and specify one or more codes for each transmitter if additional options are required.

Note 11: Not available with Hazardous area certification code WM, WN, WP
Note 12: Not available with Hazardous area certification code EN, E4, E6, EA, EY, EZ, ES, W1, W2, WC, W3, W4, W5, W6, W7, W8, WF, WG, WH, WM, WN, WP
Note 13: Not available with Output code 2, 3, 9

Standard delivery items (can be differently specified by additional ordering code)
- General purpose (no electrical certification)
- No display, no mounting bracket, no surge protection
- Short-form leaflet instruction and labels in English (metal nameplate; self-adhesive certification and tag)
- Configuration with kPa and deg. C units
- No test, inspection or material traceability certificates
...Ordering Information

Basic ordering information for model 266NRH Absolute Pressure Transmitter with remote seal

Select one character or set of characters from each category and specify complete catalog number. Refer to additional ordering information and specify one or more codes for each transmitter if additional options are required.

**Off-line flange diaphragm seal to EN 1092-1**

**Transmitter Side of Connection - 6th character**

- High pressure side: H
- Low pressure side: L

**Mounting Flange Rating / Size - 7th and 8th characters**

- PN 16 - 40 / DN 25: L2
- PN 16 - 40 / DN 40: M2

**Mounting Flange Material / Seat Form - 9th character**

- AISI 316 L ss / Form B1 - serrated finish: NACE S
- Hastelloy C-276 / Form B1 - serrated finish: NACE H

**Diaphragm Material - 10th and 11th characters**

- AISI 316 L ss: NACE SM
- Hastelloy C-276: NACE HM
- Hastelloy C-2000: NACE MM
- Inconel 625: NACE LM
- Tantalum: NACE TM
- AISI 316 L ss gold plated: NACE NM

**Capillary Protection - 12th character**

- AISI 316 L ss armour: A
- AISI 316 L ss armour with PVC protective cover: B
- Extension tube for direct mount seal: (Note 1) N

Note 1: Suitable for oxygen service
Note 2: Suitable for food application
IMPORTANT REMARK FOR ALL MODELS
THE SELECTION OF SUITABLE WETTED PARTS AND FILLING FLUID FOR COMPATIBILITY WITH THE PROCESS MEDIA IS A CUSTOMER’S RESPONSIBILITY, IF NOT OTHERWISE NOTIFIED BEFORE MANUFACTURING.

NACE COMPLIANCE INFORMATION
1. The materials of construction comply with metallurgical recommendations of NACE MR0175/ISO 15156 for sour oil field production environments. As specific environmental limits may apply to certain materials, please consult latest standard for further details. AISI 316/316 L, Hastelloy C-276, Monel 400 also conform to NACE MR0103 for sour refining environments.

2. NACE MR-01-75 addresses bolting requirements in two classes:
   – Exposed bolts: bolts directly exposed to the sour environment or buried, encapsulated or anyway not exposed to atmosphere
   – Non-exposed bolts: the bolting must not be directly exposed to sour environments and must be directly exposed to the atmosphere at all times.

266DRH bolting identified by “NACE (non exposed)” are in compliance with requirements of NACE MR0103 when considered “non exposed bolting”.

266DRH bolting identified by “NACE” are in compliance with requirements of NACE MR0175 when considered “exposed bolting”.
