Switching Sequence/Omkopplingsförlopp

Reversal of switching direction

The contact arms will be at rest during the first operation. The switching is performed by means of the diverter switch only.

Växling av omkopplingsriktning

Kontaktarmarna står stilla under första manövern och omkopplingen utförs enbart medelst lastkopplaren.

From even to odd positions

Contact arm V moves one step, after which the diverter switch contacts operate as follows: v opens, y closes, u opens and x closes.

Från jämna till udda lägen

Kontaktarm V flyttar sig ett steg, varefter lastkopplaren kopplar: v bryter, y sluter, u bryter och x sluter.

From odd to even positions

Contact arm H moves one step, after which the diverter switch contacts operate as follows: x opens, u closes, y opens and v closes.

Från udda till jämna lägen

Kontaktarm H flyttar sig ett steg, varefter lastkopplaren kopplar: x bryter, u sluter, y bryter och v sluter.
