Original instructions

Magne v2
Electromagnetic process lock

Please note!
Magne 1 and 2 are obsolete and have been replaced by Magne 3 and 4.
Read and understand this document

Please read and understand this document before using the products. Please consult your ABB JOKAB SAFETY representative if you have any questions or comments.

WARRANTY

ABB JOKAB SAFETY’s exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by ABB JOKAB SAFETY.

ABB JOKAB SAFETY MAKES NO WARRANTY OR REPRESENTATION, EXPRESSED OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS, ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OR THEIR INTENDED USE. ABB JOKAB SAFETY DISCLAIMS ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED.

LIMITATIONS OF LIABILITY

ABB JOKAB SAFETY SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall responsibility of ABB JOKAB SAFETY for any act exceed the individual price of the product on which liability asserted.

IN NO EVENT SHALL ABB JOKAB SAFETY BE HELD RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS ABB JOKAB SAFETY’S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

SUITABILITY FOR USE

ABB JOKAB SAFETY shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer’s application or use of the product. At the customer’s request, ABB JOKAB SAFETY will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.

Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, and installations subject to separate industry or government regulations.

Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE ABB JOKAB SAFETY PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PERFORMANCE DATA

While every effort has been taken to ensure the accuracy of the information contained in this manual ABB JOKAB SAFETY cannot accept responsibility for errors or omissions and reserves the right to make changes and improvements without notice. Performance data given in this document is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of ABB JOKAB SAFETY’S test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the ABB JOKAB SAFETY Warranty and Limitations of Liability.

Please note!

Magne 1 and 2 are obsolete and have been replaced by Magne 3 and 4.

Please note!
Magne 1 and 2 are obsolete and have been replaced by Magne 3 and 4.
1 Introduction

Scope
The purpose of these instructions is to describe the electromagnetic process lock Magne and to provide the necessary information required for assembly, installation, checks and adjustments after installation, and maintenance. The instructions include the significant information necessary for the electric installation of Magne.

Audience
This document is intended for authorized installation personnel.

Prerequisites
It is assumed that the reader of this document has knowledge of the following:

- Basic knowledge of ABB Jokab Safety products.
- Knowledge of safety devices and process locks.
- Knowledge of machine safety.

Special notes
Pay attention to the following special notes in the document:

⚠️ Warning! Danger of severe personal injury!
An instruction or procedure which, if not carried out correctly, may result in injury to the technician or other personnel.

⚠️ Caution! Danger of damage to the equipment!
An instruction or procedure which, if not carried out correctly, may damage the equipment.

NB: Notes are used to provide important or explanatory information.
2 Overview

General description

Magne is an electromagnetic process lock designed without any moving parts, making it durable and well suited for use in industrial applications and other harsh environments. Magne can lock a door or hatch with a holding force of up to 1500 N. When power is turned off, no magnetic material will stick on the surface of the magnet.

Magne 1A is an electromagnetic lock suited for use with any external interlock switch, if required.

Magne 2A and -2Ax are electromagnetic locks equipped with a built-in Eden sensor for guard interlocking. Magne 2A has an 8-pole M12-connector, allowing information outputs for indication signals (e.g. anchor plate locked to magnet). Magne 2Ax has a 5-pole M12-connector with pin configuration enabling connection to a Urax adaptation device for connection to the AS-i bus.

Magne 1B, 2B and 2Bx are identical to above respectively mentioned models except for a permanent magnet built into the anchor plate, which will hold the door or hatch closed with approximately 30 N of force when no power is supplied to the electromagnet. For further details see chapter Model overview.

Y-connections can be used to connect several Magne units and Eden sensors in series, enabling control and monitoring by a single Pluto safety-PLC or Vital safety module. No current peaks above rated current consumption occur at lock activation, simplifying system dimensioning.

Safety regulations

⚠️ Warning!

Carefully read through this entire manual before using the device.

The devices shall be installed by a trained electrician following the Safety regulations, standards and the Machine directive.

Failure to comply with instructions, operation that is not in accordance with the use prescribed in these instructions, improper installation or handling of the device can affect the safety of people and the plant.

For installation and prescribed use of the product, the special notes in the instructions must be carefully observed and the technical standards relevant to the application must be considered.

In case of failure to comply with the instructions or standards, especially when tampering with and/or modifying the product, any liability is excluded.
3 Connections

NB: Shielded cable is recommended between this unit and the rest of the safety circuits.

Caution! All cable colours according to ABB Jokab Safety standard cable.

Magne 1A/B

5-pole M12-connector:
1) Brown: Locking, +24 VDC
2) White: Info-contact, common
3) Blue: 0 VDC
4) Black: Info-contact, locked
5) Grey: Info-contact, unlocked

Magne 2A/B

8-pole M12-connector:
1) White: Dynamic signal input
2) Brown: +24 VDC
3) Green: Locking, +24 VDC
4) Yellow: Locking, 0 VDC
5) Grey: Info-signal, closed (max 10 mA)
6) Pink: Dynamic signal output
7) Blue: 0 VDC
8) Red: Info-signal, locked (max 100 mA)

Please note! Magne 1 and 2 are obsolete and have been replaced by Magne 3 and 4.
Please note!
Magne 1 and 2 are obsolete and have been replaced by Magne 3 and 4.

Magne 2Ax/Bx

5-pole M12-connector:
1) Brown: +24 VDC
2) White: Dynamic signal input
3) Blue: 0 VDC
4) Black: Dynamic signal output
5) Grey: Locking

NB: Magne 2Ax/Bx can be connected to the AS-i bus using Urax B1R.
4 Installation and maintenance

Maximum installation tolerance between magnet and anchor plate is ± 5 mm in direction along Magne body and ± 3 mm sideways. Available fittings for conventional doors are designed for 5-15 mm door gap. Installation measurements for sliding door according to figure below.

Mount the anchor plate with 2pc M8 screws from the backside. These M8 screws may not be tightened so that the cell rubber is compressed down to a thickness of less than 8mm. Choose suitable screws that reach the bottom of the anchor plate and leaves enough free room for the cell rubber to ensure movement of the anchor plate.

Recommended tightening torque for the screws is 7 ± 2Nm

Specific installation instructions are included with each mounting kit.

Installation precautions

Follow the below instructions carefully to avoid injuries or damage to the device.

Caution!

- After mounting the magnet and anchor plate, make sure the surfaces are flat and parallel, so that full contact is obtained when the door closes.
- Magne must be mounted as close as possible to the door handle. Distance between lock and door handle will cause the door frame to act as a lever, decreasing the operating force required to force the lock open. Additionally, it may cause the anchor plate to be twisted off of the magnet if the door is forced, considerably lowering the holding force of the lock.
- The lock holding force can be significantly lowered if the anchor plate and cell rubber are unable to move, make sure that full contact is always obtained.
- Make sure Eva is aligned correctly in relation to the built-in Adam sensor (applies to Magne 2A/B, -2Ax/Bx). See section Eva position and orientation.
- The anchor plate might be permanently damaged if the tightening torque exceeds 9Nm (7±2Nm) during mounting. The anchor plate may not be used as the only door stop. Additional door stop(s) must be used to prevent damage to Magne.

NB: All measurements in millimetres.
**Warning!**

- The installation tolerance of the build-in reed sensor might be impaired if Magne is mounted directly on steel. To ensure retained function a distance plate of 5 mm between Magne and the mounting surface is recommended.
- Connect the cable to the M12-connector after Magne has been mounted on the guard.
- All safety functions must be tested before starting up the system.

**Maintenance**

The magnet should be cleaned regularly to maintain full holding force.

**Warning!**

The safety functions and the mechanics shall be tested regularly, at least once every year to confirm that all the safety functions are working properly (EN 62061:2005).

In case of breakdown or damage to the product, contact the nearest ABB Jokab Safety Service Office or reseller. Do not try to repair the product yourself since it may accidentally cause permanent damage to the product, impairing the safety of the device which in turn could lead to serious injury to personnel.

**Eva position and orientation**

*This section applies to Magne 2A/B, -2Ax/Bx only.*

The integrated interlock switch Eden consists of two units, Adam and Eva. The two units must be aligned correctly in order for the sensor to function properly. Adam is built into the housing of Magne 2, potted between the magnet and M12 connector. When the door is closed, correct Eva position is on top of the Magne housing according to the figure below.

![Eva unit in correct position and orientation on top of the Adam unit built into Magne 2A/B or Magne 2Ax/Bx.](image)

The safety application is dependent on the Eden sensor to determine if a guard is open or closed, making it an important task to carefully position the sensors and test the safety functions.

**Testing of the safety functions**

*This section applies to Magne 2A/B, -2Ax/Bx only. If used, similar tests should be carried out for external interlock switches when used together with Magne 1A/B.*

Make sure the safety unit is working properly by following the steps below:

- Interrupt the dynamic safety circuit before this unit. The LED will flash between green and red.
- Restore the dynamic safety circuit.
- Move Eva into position next to Adam (i.e. close the door). The LED will light green.
- Move Eva away from Adam (i.e. open the door). The LED will light red as Eva is moved out of maximum sensing distance to Adam.

An additional function test can be carried out by slowly moving Eva away from Adam (i.e. slowly open the door from fully closed position). The LED will flash fast between green and red when Eva is 2 mm from max sensing distance to Adam.
## Troubleshooting

This section applies to Magne 2A/B, -2Ax/Bx only.

<table>
<thead>
<tr>

<td>The unit is defect</td>
<td>The unit needs to be replaced. Contact ABB Jokab Safety.</td>
</tr>
</tbody>
</table>

⚠️ **Warning!** Replace the defected unit with a new one and **never** bypass the safety circuit using Tina 1A or similar solution.

---

Please note!  
Magne 1 and 2 are obsolete and have been replaced by Magne 3 and 4.
5 Operation

Locking:
1. Close the door.
2. Locking according to PLC program (e.g. by signal from push button).

Unlocking:
1. Unlocking according to PLC program (e.g. by signal from push button, or automatically when the machine/process cycle has finished as intended).
2. Open the door.

LED indication
