**AUXILIARY CONVERTER**

**BORDLINE® M260 AC**

Auxiliary converter for rolling stock applications

BORDLINE® M260 AC converts the power from the 25 kV / 50 Hz line into 415 V<sub>AC</sub>, three-phase auxiliary power for running auxiliaries of rolling stock applications with integrated battery charger.

**System overview**

Incoming single-phase supply (25 kV / 50 Hz) from the catenary is stepped down by the on-board traction transformer (1000 V<sub>AC</sub>) and fed to the BORDLINE® M260 AC auxiliary converter. The auxiliary converter delivers the required power for the auxiliaries in the locomotive.

Each auxiliary converter BORDLINE® M260 AC contains the following main parts:

- AC/DC rectifier module
- Intermediate DC-link filter
- IGBT based DC to AC inverter
- Three-phase sine filter module
- PEC80 (PP D234A) control module
- Battery charger

**Characteristics**

- Air cooled Power Electronic Building Blocks (PEBB)
- AC/DC half controlled asymmetric rectifier
- IGBT based battery charger with galvanic isolation
- Auxiliary control platform (PEC80)
- IGBT based three-phase inverter with sine filter
- Energy efficient power conversion
- Closed IP54 power cabinet
- Service-friendly construction with ‘handy’ modular building blocks

Powerful control platform
ABB’s control platform PEC 80 (PP D234A) is used in all auxiliary converters, as well as, in a wide range of industrial applications. The auxiliary converter has a powerful processor paired with an intelligent control and real time monitoring system best suited for traction applications.

Control Interface
The auxiliary converter is compatible with CANopen and MICAS-S2 or TCN based vehicle control unit through Multifunctional Vehicle Bus (MVB) interface via OGF/EMD/ESD.

Cooling system
The equipment is efficiently air cooled. An internal blower provides forced air circulation inside the cubicle.

Mechanical design
BORDLINE® M260 AC is housed in an IP54 compartment for control electronics, power modules, power supplies, switch gear, sine filter capacitor, resistors and internal churning fans, designed for mounting in the machine room. Due to its modular design, it allows easy maintenance access.

Diagnostic and service
The service-friendly modular design with highly standardized components ensures high reliability, excellent spare parts availability, and optimized life-cycle costs. The auxiliary converter is delivered with BORDLINE® View, a diagnostic tool that visualizes signals, various parameters and the state of the converter. It consists of an advanced self-diagnosis function, which provides advice and instructions for service and repair. BORDLINE® View is easy to use and runs on a standard PC.

Example of application
BORDLINE® M260 AC is in operation in the locomotives of Indian Railways.
