# Glossary Grinding solutions

# Table of contents

Introduction List of acronyms Terminology 3 4 5

# Introduction

This document provides the definitions and spelling of the most common terms and acronyms used for grinding solutions.

#### Categories

A tag is allocated to each term to define the context where the term is used. It guides the reader to understand quickly in which category the term is applied.

- application
- system
- product
- service
- general

### Reasons for a glossary

### Consistency = key

Consistency in the language and messages we use demonstrates

- our focus,
- improves recognition of ABB and our products,
- gives our products a clear profile
- and thus a more professional and authentic/reliable appearance.

#### Main rules

- We use US spelling.
- We capitalize only proper nouns, proper names (of persons, countries, companies, etc.), derivatives ("he is American", etc.), formal titles (Country Manager, etc.) and product names (GAP-Watch<sup>™</sup>, Expert Optimizer, Knowledge Manager, AC800PEC) or acronyms/abbreviations.
- We apply the rules to everything we write.

# List of acronyms

AC	alternating current	MCB	main circuit breaker
AG	autogenous mill	MLCP	mill local control panel
AI	analog input	MMS	manufacturing message specification
AO	analog output	MCC	motor control center
ARU	active rectifier unit	MTBF	mean time between failure
BOD	break over diode	MTTR	mean time to repair
CRB	controlled rollback	NS	norms and standards
CCT	cycloconverter control terminal	OLE	object linking and embedding
DC	direct current	OPC	OLE for process control
DCS	distributed control system	PD	partial discharge
DI	digital input	PEC	power electronics controller
DIRIS®	diagnostic inspection with rotor in situ	PF	power factor
DO	digital output	PFC	power factor correction
DTC	direct torque control	PROFIBUS	process field bus
eg	exempli gratia	PLC	programmable logic controller
FAT	factory acceptance test	RMD	ring-geared mill drive
GMD	gearless mill drive	SAG	semiautogenous mill
HF	harmonic filter	SC	static converter
HPGR	high pressure grinding rolls	SC	synchronous condenser
HVAC	heating, ventilation and air conditioning	TI	test instruction
HMI	human machine interface	TC	test certificate
HSS	high-speed solution	TEC16	tension easy check
ie	id est	UPS	uninterruptible power supply
ITP	inspection and test plan	VMS	video monitoring system
IO	input output	VSI	voltage source inverter
LSS	low-speed solution	WI	work instruction
LV	low voltage	WAZ	Wechselstrom Antrieb / Achsial Zement
MV	medium voltage		

# Terminology

### Α

Term Acronym Category Application Definition	AC800M n/a product GMD, RMD Automation controller 800 modular. Embedded control platform used for the controls of digital and analogue signals necessary to control, protect and monitor the gearless mill drive system.
Term Acronym Category Application Definition	AC800PEC n/a product GMD, RMD Automation controller 800 power electronic control. Embedded control platform used for the control of the frequency converter and with this the electrical motor of the mill drive system.
Term Acronym Category Application Definition	ACS1000 n/a product RMD Medium voltage, VSI topology based, variable-speed frequency converter used for ring-geared drive solutions.
Term Acronym Category Application Definition	ACS6000 n/a product RMD Medium voltage, VSI topology based, variable-speed frequency converter used for ring-geared drive solutions.
Term Acronym Category Application Definition	active rectifier unit ARU product RMD ARU is a modular part of the ACS6000, which actively rectifies the AC line voltage and charges the DC link capacitors. The ARU allows four-quadrant operation for regenerative braking, which reduces the overall energy
Term Acronym Category Application	air clutch n/a product RMD
Application Definition Term Acronym	A mechanical device using air to gradually start or stop the transmission of power from a usually synchronous motor.  air gap n/a
Category Application Definition	system general Distance between the stator and the rotor of the motor where the magnetic flux is built. In the gearless mill motor the distance is monitored and protected within the permitted limits by the AC800PEC controller.

### C Term

### circuit breaker

Acronymn/aCategoryproductApplicationgeneralDefinitionAutomatic switch that stops the flow of electric current in a suddenly overloaded or otherwise abnormally<br/>stressed electric circuit. Also referred to as breaker.

Term Acronym	close-loop control n/a
Category	system
Application Definition	general Type of control system that automatically changes the output based on the difference between the feedback and
Demnition	the reference signal.
Term	controlled rollback
Acronym Category	CRB application
Application	GMD, RMD
Definition	Function used to avoid oscillation of the mill while stopping. Also called "reduce mill rocking".
Term	coupling supervision n/a
Acronym Category	application
Application	RMD
Definition	Monitors deviations in torque to detect a failure or a slippage of the couplings between the motors and mill on dual pinion drives. Monitors the derivatives of torque and actual speed on single pinion drives. In case a failure is detected, the drive stops the motor, preventing damage to the drive train.
Term	creeping
Acronym Category	n/a application
Application	GMD, RMD
Definition	Mill speed used during maintenance when changing the mill liners or during mechanical inspection. The mill creeping speed range is between 0.3 2 rpm.
Term	cycloconverter
Acronym Category	n/a product
Application	general
Definition	Type of frequency converter topology especially suitable for low frequency and high current application. It is used to run the gearless mill drive.
Term	cycloconverter control terminal
Acronym Category	CCT product
Application	GMD
Definition	Touch screen panel mounted inside the MLCP to control and monitor the GMD system locally.
D	
Term	diagnostic inspection with rotor in situ
Acronym	DIRIS®
Category Application	product GMD
Definition	A technology offering effective inspections of the motor slot wedges while the rotor remains in place.
Term	diode bridge
Acronym Category	n/a product
Application	RMD, HPGR
Definition	Type of rectifier built of diodes that converts AC to DC voltage. Allows two-quadrant operation (motoring in two directions with no regenerative braking), maintains the power factor at 0.96 in the whole operating range.
Term	direct current
Acronym Category	DC system
Application	general
Definition	Uni-directional flow or movement of electric charge whose polarity never reverses.

Term	direct torque control
Acronym	DTC
Category	product
Application	RMD, HPGR
Definition	Direct torque control is an optimized motor control method for AC drives that allows direct control of all the core motor variables. In DTC, stator flux and torque are used as primary control variables. The motor state calculations are updated 40'000 times per second in the advanced motor software model by the high-speed digital processor. Due to the continuous updating of the motor state and the comparison of the actual values to the reference values, every single switching in the inverter is determined separately.
Term	distributed control system
Acronym	DCS
Category	product
Application	general System controlling industrial or manufacturing process in which the controller elements are not located controlly
Definition	System controlling industrial or manufacturing process in which the controller elements are not located centrally but distributed throughout the system with each component sub-system controlled by one or more controllers. The entire system of controllers is connected by networks for communication and monitoring. For example: The GMD system is connected to the DCS as part of the overall process control.
Term	downtime
Acronym	n/a
Category Application	application GMD, RMD, HPGR
Definition	Time for which the mill is not operating.
Term	drive
Acronym	n/a
Category Application	product general
Definition	A drive is an electronic device used to regulate the performance of an electric motor. It works by controlling frequency and voltage of the motor. The energy is supplied to the process through the motor shaft. Two physical quantities describe the state of the shaft: torque and speed. To control the flow of energy we must, therefore, ultimately, control these quantities.
Term	DriveMonitor™
Acronym	n/a
Category	product
Application	RMD
Definition	An intelligent monitoring and diagnostics system, which allows secure access to the drive from any location in the world.
F	
_	
Term	E-house

L		
Г		

Term	factory acceptance test
Acronym	FAT
Category	application
Application	general
Definition	Test made in the factory to approve the design and the manufacturing in accordance with the requirements.
Term	fire-fighting system
Acronym	n/a
Category	product
Application	general
Definition	Equipment used to prevent, extinguish, localize, or block fires in enclosed spaces. Fire-fighting systems are installed in buildings and rooms where the fire hazard is comparatively high. A fire-fighting system includes a sensor capable of detecting combustion, alarm signaling devices, fire-extinguishing equipment, starting and stopping devices, and feeders for the fire-extinguishing substance; in some cases, it includes control equipment for the production process being protected. Atomizers, foam generators, and pipe nozzles form and direct the stream of the fire-extinguishing substance, which may be a liquid, foam, powder, or gas. Fire-extinguishing substances are fed into the system from a centralized supply from self-contained or combined feeders.
<b>T</b>	
Term	frequency converter
Acronym	n/a
Category	product
Application	
Definition	see drive
Term	firing angle
Acronym	n/a
Category	product
Application	GMD
Definition	Control angle representing the start of thyristor conduction.
Term	foot mounted
Acronym	n/a
Category	system
Application	GMD
Definition	Ring motor is mounted on the base. This design is used for mills up to 26 feet in diameter.
Term	frozen charge protection
Acronym	n/a
Category	application
Application	GMD, RMD
Definition	Detection during the mill starting process to prevent any sedimented and/or frozen charge to break the mill/motor
	arrangement.
Term	frozen charge remover
Acronym	n/a
Category	application
Application	GMD, RMD
Definition	When the mill charge is sedimented and/or frozen, this function allows to release the load and to cascade it at
	the design value.

## G

TermGAP-Watch™Acronymn/aCategoryproductApplicationGMDDefinitionMonitoring system designed to constantly measure the length of the air gap between the stator and the rotor of<br/>the ring motor while the mill is rotating. The measurement provides a real-time overview of the air gap along the<br/>complete circumference of the motor.

Term Acronym Category Application Definition	gearbox n/a system RMD Mechanical equipment that consist of gears and gear trains. It transmits mechanical energy by converting speed and torque from the motor to the mill pinion.
Term Acronym Category Application Definition	gearless mill drive GMD system GMD System solution used in the cement and mineral industry to drive grinding mills, consisting of converter transformers, frequency converter, ring motor and auxiliaries. Especially suited for large power requirement, it has a high value of efficiency and availability.
Term Acronym Category Application Definition	greenfield n/a application general Site project earmarked for commercial and/or industrial development, with no need to demolish or rebuild existing structures or without the need to consider any prior work.

## Н

harmonic n/a system general Signal with a frequency which corresponds to a multiple (integer or not) of the base frequency.
harmonic filter HF system general Device used to damp the harmonics created by an electrical circuit.
heating, ventilation and air conditioning HVAC system general Technology of indoor or automotive environmental conditions.
high pressure grinding rolls HPGR drive system HPGR Grinding equipment that consists of two counter rotating rolls (one floating, one fixed) enclosed in a strong frame. Pressure is applied to the floating roll by means of a hydro-pneumatic spring system while the other is fixed in the frame. The material feed is introduced by a hopper mounted above the rolls, between which it is compressed under high pressure giving rise to breakage amongst the individual particles. This process is called inter-particle comminution.
high-speed solution HSS system RMD A drive system, which consists of a transformer, a drive, a mill controller and one or two high-speed machines (typically 900-1200rpm) connected to a gearbox, which transmit the required torque to the mill pinion (see also low speed solution) with lower speed.

Term	human machine interface
Acronym	HMI
Category	product
Application	general
Definition	The user interface in a manufacturing or process control system. It provides a graphics-based visualization of
	an industrial control and monitoring system. It resides in an office-based computer that communicates with a
	specialized computer in the plant such as a programmable logic controller (PLC) or distributed control system
	(DCS).
1	
Term	id est
Acronym	ie
Category	general
Application	general
Definition	id est means "that is"
Такиа	Inculated Octo Director Transistor
Term	Insulated Gate Bipolar Transistor
Acronym	IGBT
Category	product
Application Definition	RMD Rewar algotrania comiconductor, acto like a commutating quitab
Demnition	Power electronic semiconductor, acts like a commutating switch.
Term	Integrated Gate Commutated Thyristor
Acronym	IGCT
Category	product
Application	RMD
Definition	Power electronic semiconductor, acts like a commutating switch.
	, and the second s
Term	induction motor
Acronym	n/a
Category	product
Application	RMD
Definition	see Machines
_	
Term	inspection and test plan
Acronym	ITP
Category	product
Application	general Disc defining the test (neuting, turg, and without test) mode on equipment hefere abiercent
Definition	Plan defining the test (routine, type and witness test) made on equipment before shipment.
Term	inching
Acronym	n/a
Category	application
Application	GMD, RMD
Definition	Running the mill at very low speed for maintenance purposes.
Term	interlock
Acronym	n/a
Category	system
Application	general
Definition	Arrangement of hard-wired signal preventing unexpected start-up of the system.
Ŧ	
Term	inverter
Acronym	n/a
Category	product
Application Definition	RMD An electrical device for converting direct current (DC) into alternating current (AC)(Also see rectifier).
	An electrical device for converting direct current (DO) into alternating current (AO)(AISO See rectilier).

J

L	
Term	life cycle
Acronym	n/a
Category	application
Application	general
Definition	Cycle time between conception and obsolescence of equipment and/or project. The main phases of the life cycle are conception, design, realization and service.
Term	load sharing
Acronym	n/a
Category	system
Application	RMD, HPGR
Definition	
Demnition	Capability of sharing the torque equally between the pinions in a dual pinion ring-geared mill configuration.
Term	low voltage
Acronym	LV
Category	system
Application	general
Definition	Write "low voltage", but when used as adjective: low-voltage switchgear.
Deminion	
	According to IEC, voltage range between 50 VAC and 1 kVAC or 120 VDC and 1.5 kVDC.
Term	low-speed solution
Acronym	LSS
Category	system
• •	RMD
Application	
Definition	Drive system, which consists of transformers, a drive, a mill controller and one or two low-speed machines (typically 180-200rpm) connected directly to the mill pinion (see also high-speed solution).
N A	
Μ	
Term	machines
Acronym	n/a
Category	product
Application	general
Definition	Motors and generators are collectively referred to as "machines" or "electric machines." Motors are machines
	-
	that convert electrical energy into mechanical work in the form of a rotating shaft, while generators convert the
	mechanical work of a rotating shaft into electricity. The speed of a "synchronous" machine, i.e., the rate at which
	mechanical work of a rotating shaft into electricity. The speed of a "synchronous" machine, i.e., the rate at which its shaft rotates, is dictated by the frequency of electricity in the grid to which it is connected. The speed of a
	mechanical work of a rotating shaft into electricity. The speed of a "synchronous" machine, i.e., the rate at which its shaft rotates, is dictated by the frequency of electricity in the grid to which it is connected. The speed of a synchronous machine is accurately predictable. This means that it maintains its speed irrespective of the load
	mechanical work of a rotating shaft into electricity. The speed of a "synchronous" machine, i.e., the rate at which its shaft rotates, is dictated by the frequency of electricity in the grid to which it is connected. The speed of a synchronous machine is accurately predictable. This means that it maintains its speed irrespective of the load placed on it. The speed of an asynchronous machine is slightly slower than the frequency of the electricity it
	mechanical work of a rotating shaft into electricity. The speed of a "synchronous" machine, i.e., the rate at which its shaft rotates, is dictated by the frequency of electricity in the grid to which it is connected. The speed of a synchronous machine is accurately predictable. This means that it maintains its speed irrespective of the load placed on it. The speed of an asynchronous machine is slightly slower than the frequency of the electricity it consumes or generates. Asynchronous motors slow down as their load increases and asynchronous generators

International standard dealing with messaging system for transferring real-time process data and supervisory control information between networked devices and/or computer applications. The data exchange between the AC800PEC drive controller and the ABB PLC is based on the MMS protocol which uses Ethernet as the physical data transport layer.

Term Acronym Category Application Definition	medium voltage MV system general Write "medium voltage", but when used as adjective: medium-voltage switchgear. According to ANSI/IEEE, voltage range between 1 kVaAC and 35 kVDC.
Term Acronym Category Application Definition	mill controller n/a system GMD, RMD Specific controller used to control all grinding mill functionalities and protection.
Term Acronym Category Application Definition	mill local control panel MLCP product GMD, RMD Panel installed locally at the motor to control and monitor the GMD or RMD system locally during maintenance mode.
Term Acronym Category Application Definition	<ul> <li>mill overload detection</li> <li>n/a</li> <li>application</li> <li>RMD, GMD</li> <li>If the mill is overloaded, the drive protects itself from overcurrent by reducing the speed. For mill applications, if the speed reduces then the material flow decreases and the load inside the mill can increase. The torque limits and speed are monitored to detect this behavior and stop the drive in case an overload is detected.</li> </ul>
Term Acronym Category Application Definition	<ul> <li>mill power ride-through</li> <li>n/a</li> <li>application</li> <li>GMD, RMD</li> <li>Controls the drive during ride-through so it can cope with network disturbances and voltage dips without stopping the mill. This function also provides smooth acceleration back to the speed set point after the supply voltage recovers, thus reducing the mechanical stress of the drive train.</li> </ul>
Term Acronym Category Application Definition	mill turn 180° n/a application GMD, RMD Controlled half revolution of a grinding mill (for cement industry only).
Term Acronym Category Application Definition	motor control center MCC product general Assembly of one or more enclosed sections having a common power bus and principally containing motor control units to govern in predetermined manner the performance of an electric motor. Motor control centers are in modern practice a factory assembly of several motor starters. A motor control center can include variable frequency drives, programmable controllers, metering and protection.

## Ν

Term	norms and standards
Acronym	NS
Category	system
Application	general
Definition	Rules regulating the practice to design, to manufacture and to test equipments.

$\bigcirc$	
Term	object linking and embedding
Acronym	OLE
Category	product
Application Definition	general Industrial connectivity standard that enables the transfer of automation data between automation hardware and
Deminition	software. The OPC foundation is responsible for defining and maintaining all OPC specifications. OPC is based
	on client/server technology. OPC is a function library which provides a common API (Application Programming
	Interface) for automation systems.
Term	OLE for process control
Acronym	OPC
Category	product
Application Definition	general OPC stands for OLE for process control. OPC is a published industrial standard for system interconnectivity. The
Deminion	OPC foundation maintains all the OPC specifications. It enables applications to exchange data on one or more
	computers using a client/server architecture. OPC defines a common set of interfaces. So applications retrieve
	data in exactly the same format regardless of whether the data source is a PLC, DCS, gauge, analyzer, software
	application or anything else. As a result, OPC is as an out-of-the-box, plug and play communication solution.
Term	on site / off site
Acronym Category	n/a general
Application	general
Definition	example: "He is currently on site".
Term	on-site/off-site
Acronym	n/a
Category	general
Definition	Example where the term is used as adjective: "He sent us the report of the on-site inspection".
Term	online
Acronym	n/a
Category	general
Application Definition	general Do not write "on-line".
Deminion	
Term	open-loop control
Acronym	n/a
Category Application	system
Definition	general Type of control system that computes its input into a system using only the current state and the model of the
	system. The open-loop control does not use feedback to determine if its output has achieved the desired goal of
	the input.
Term	overduty cycle mode
Acronym	n/a
Category	application
Application	RMD, GMD
Definition	Allows the drive system to generate additional torque for a certain amount of time in order to reduce load inside the mill when overloaded.

## Ρ

Termpartial dischargeAcronymPDCategorysystemApplicationgeneralDefinitionLocalized dielectric breakdown of an electrical insulation system under high voltage stress.

Term Acronym Category Application Definition	pedestal mounted n/a system GMD The ring motor is mounted on the sides, approximately half way up the motor height, on pedestals built on the base. This design is mostly used for mills larger than 26 feet in diameter.
Term Acronym Category Application Definition	<b>pinion</b> n/a system RMD A pinion is a round gear used to transmit the torque from the motor to the ring-geared mill.
Term Acronym Category Application Definition	power electronics controller PEC product general ABB-embedded control platform used for the control of the cycloconverter. It also controls digital and analogue signals necessary to control, protect and monitor the gearless mill drive system (see AC800PEC).
Term Acronym Category Application Definition	power factor PF system general System in an electrical circuit; angle between the voltage and the current. It also reflects the contribution of apparent, active and reactive electrical power in a supplied circuit.
Term Acronym Category Application Definition	power factor correction PFC system general Correction of the power factor to maximize its value close to 1.
Term Acronym Category Application Definition	process field bus PROFIBUS system general Process field bus. Industrial control standard for field bus communication in automation technology.
Term Acronym Category Application Definition	programmable logic controller PLC product general Microprocessor device that controls a dedicated process through digital and analogue signals.
Term Acronym Category Application Definition	pulse n/a system general Current pulsations created by rectifiers in a power electronic system. Its value reflects the type of network and the topology of the rectifier. In GMD systems, depending of the power rating 12-pulse or 18-pulse are commonly used. In RMD systems 12-, 18- or 24-pulse. Write: 12-pulse/18-pulse converter.
Q Term Acronym Category	quadrant (4-quadrant) n/a system

Acronymn/aCategorysystemApplicationgeneralDefinitionA sector equal to one quarter of a circle, which defines in which mode the motor is acting.<br/>I and III quadrant: Torque and speed have same direction, so the drive is accelerating (motoring).<br/>II and IV quadrant: Torque is in the opposite direction than speed, so the drive is decelerating (braking).

## R

Term	rectifier
Acronym	n/a
Category	product
Application	general
Definition	An electrical device used to convert alternating current (AC) into direct current (DC). Also see inverter.
Term	regenerative braking
Acronym	n/a
Application	general
Definition	Braking (operation modes in quadrants II and IV) of a load by means of reversing the power flow from the load to
	back the network as opposed to thermally dissipating the rotating energy of the load into mechanical brake or a
	resistor (braking chopper).
Term	ring motor
Acronym	n/a
-	
Category	product
Application	GMD
Definition	Motor built around its driven equipment allowing direct magnetic torque transmission. Especially used for high
	power and high torque applications rated above possible mechanical transmission. Avoiding a mechanical
	gearbox, the system provides very high efficiency and availability.
	geabox, the system provides very high enciency and availability.
Torm	vide Abverrah
Term	ride-through
Acronym	n/a
Category	system
Application	GMD, RMD, HPGR
Definition	The capability of a drive system to stay alive during a voltage drop or a voltage loss. The drive sets the torque
Bonnicon	reference to zero. The mill will start to slow down and the drive takes the energy of the still rotating machine to
	stabilize (motor is in generator operation). The drive stays in ride-through mode until either main power is back to
	normal conditions or the machine speed reaches 10% rated speed. In the latter case the drive trips.
Term	ring gear
Acronym	n/a
Category	system
Application	RMD
Definition	A gear cut on a ring shaped rim, which is mounted around the mill.
_	
Term	ring-geared mill drive
Acronym	RMD
Category	system
Application	RMD
Definition	Mill configuration where the torque generated by the motor is transmitted via a pinion (sometimes through a
Deminition	
	gearbox) to the ring gear, permitting the mill to turn.
S	
0	
Term	squirrel cage motor
Acronym	SCM
-	
Category	product
Application	RMD
Definition	Asynchronous machine type that has the rotor short-circuited, looking like a squirrel cage. (Also see machines).
Term	semiautogenous mill
Acronym	SAG
Category	application
Application	GMD, RMD Retating drum used to reduce the size of raw material by the projection and the self-gravity of the material itself

Definition Rotating drum used to reduce the size of raw material by the projection and the self-gravity of the material itself. A SAG mill works by means of 10% additional metallic balls charge.

Term Acronym Category Application Definition	service mode n/a system RMD Mode set on the drive, which allows to perform maintenance on the mill, such as creeping, inching or automatic positioning.
Term Acronym Category Application Definition	<pre>short-circuit power n/a system general Power available in an electrical circuit when it is short-circuited. The value defines the stability of the circuit under its normal loading condition.</pre>
Term Acronym Category Application Definition	shutdown (the) / to shut down n/a general general One word when used as a noun. Two words when used as a verb.
Term Acronym Category Application Definition	snubber circuit n/a system general Device damping the transient signal during the control and the commutation of power electronic switch.
Term Acronym Category Application Definition	stall protection n/a application general Protection used to avoid overloading situation while the mechanical driven equipment is locked.
Term Acronym Category Application Definition	standstill detection n/a application GMD, RMD Detects if the motors are at standstill before the operator is allowed to start the mill again. This function protects the mechanical system from the stress of starting the mill when it is still rocking.
Term Acronym Category Application Definition	startup (the) / to start up n/a application general Act of starting for the first time a system or an installation. Write: one word when used as a noun. Two words when used as a verb.
Term Acronym Category Application Definition	static converter SC product general Static device using power electronics to convert the line power flow in a different frequency and/or voltage and/or current.
Term Acronym Category Application Definition	SupportLinen/aservicegeneralHotline to support users with technical problems related of GMD systems.Phone: +41 (0) 844 845 845Fax: +41 (0) 58 586 73 08E-mail: minerals.supportline@ch.abb.com

Torm	
Term	synchronous condenser SC
Acronym	
Category	application
Application	general
Definition	Device identical to a synchronous motor, where the shaft is not connected to anything but spins freely. Its
	purpose is to adjust conditions on the electric power transmission grid. It either generates or absorbs reactive
	power to adjust the grid's voltage or to improve power factor.
Term	synchronous motor
Acronym	SM
Category	product
Application	GMD, RMD
Definition	see machines
Т	
Term	tension easy check
Acronym	TEC16
-	service
	GMD
Application	
Definition	Maintenance tool used to check and reset the preload on the ring motor core bolts during maintenance actions.
	This tool is designed for core bolts with thread M16.
Term	test certificate
Acronym	TC
Category	system
Application	general
Definition	Document certifying the conformity of the equipment under the appropriate norms and standards.
Demnition	bocument certifying the conformity of the equipment under the appropriate norms and standards.
Term	test instruction
Acronym	TI
Category	system
Application	general
Definition	Process under which the tests of the equipment have to be executed.
Term	Thyristor
Acronym	n/a
Category	product
Application	general
Definition	Power electronic semiconductor with controllable turn-on capability.
Term	ton
Acronym	n/a
Category	product
Application	general
Definition	Plural = tons/Do not write: tonne
-	
Term	transient recorder
Acronym	n/a
Category	system
Application	GMD
Definition	Device used to record the signals of the GMD system at a fast sampling rate to the VMS system. Especially
	helpful during test, start-up and troubleshooting.
Term	trapezoidal mode
Acronym	n/a
Category	product
Application	general
Definition	Type of supply control voltage optimized to enhance the performance of the motor while minimizing the side
Dominion	effect of the cycloconverter to the network.

U

Term	uninterruptible power supply
Acronym	UPS
Category	product
Application	general
Definition	Device that provides energy backup when the electrical power supply fails or drops to an unacceptable voltage level.

## V

V	
Term	video monitoring system
Acronym	VMS
Category	product
Application	GMD, RMD
Definition	Systems monitoring the signals relevant for the control, the operation and the protection of the GMD or RMD system and considered as HMI interface.
Term	voltage source inverter
Acronym	VSI
Category	product
Application	general
Definition	Type of frequency converter topology consisting of a rectifier, which creates a constant DC voltage and an inverter unit that creates the output voltage, which can be varied in amplitude and frequency. It is used to run the ring-geared mill.
W	
Term	Wechselstrom Antrieb/Achsial Zement
Acronym	WAZ
Category	product
Application	GMD
Definition	Denomination of the ring motor type. Followed by the bore diameter in cm, the active stator length in cm and the number of poles.
Term	WIDIPRO
Acronym	n/a
Category	service
Application	GMD
Definition	Equipment for diagnosing and investigating the condition of insulation and windings of electrical machines and apparatus.
Term	work instruction
Acronym	WI
Category	system
Application	general
Definition	Process under which the works have to be executed.
Term	worldwide
Acronym	n/a
Category	general
Application	general
D a film it i a un	

Definition

Do not write "world wide".
