# **MULTIWAVE TEMPERATURE & PRESSURE COMPENSATION OPTION DISCONTINUATION NOTICE**

ABB QUEBEC FACTORY – MW PRODUCT LINE

Dear customers,

The ABB factory responsible for the Multiwave product line regrets to inform you that the temperature and pressure compensation board is facing a critical obsolescence and is not manufacturable anymore.

Available on PUV3402 and PIR3502 since product launch, this board could provide three options for gas measurements:

- Temperature compensation
- Pressure compensation
- Temperature and pressure compensation

In practice, those options had little traction in the market and both sales and service demands are extremely low.

For those reasons we have decided to discontinue those options.

Note that the remaining stock is reserved for service cases and will be kept at the factory. Based on observed failure rate, this stock is sufficient to ensure service on those options for the next 10 years.

Best regards,

**Julie Mandar**  
Product Manager

**Marc Corriveau**  
Global Product Line Manager
