74006

Offering
Measurement & Automation Equipment for Onshore Upstream/Midstream/Downstream O&G

Number of employees
260

Operational since
1982

What we do in Bartlesville

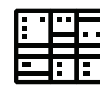

Design and manufacture measurement and automation products for the oil & gas sector. These products are used for quantity & quality measurement of oil & gas from the wellhead to the plant or refinery where it is consumed or refined into an end product. Our products are also used to optimize and control production of oil and gas wells, allowing our customers to both control cost and ensure that their wells operate safely. Our analyzers are also used in downstream applications for product quality optimization.

Who we serve

The products produced in Bartlesville are sold to oil & gas companies, both domestically and globally. Our measurement and control products are used at wells, gathering systems, pipelines and plants. Our customers include household names, as well as small and mid-sized businesses—all working to deliver critical resources that fuel our economy.
