

How to Unpack the .pgz file

The .pgz is a compressed file that can be generated in Tecnomatix products such as Process Simulate. It contains all the .cojt files that the product is made of. There are two ways to open the .pgz file:

I. Process Simulate

Picture 1: Example of where to import the .pgz file.

Here you can change settings regarding what and where to import the product.

II. Manual unpacking

- Get 7zip at Link: <http://www.7-zip.org/>
- Install 7zip.
- Locate the .pgz file.
- Right click -> 7zip -> Unpack here or choose location.
- 2 folders appear: EM_Libraries and PackAndGoCnfg (export information files).
- Open EM_Libraries -> Open Product folder: Here you will find all the .cojt files
