

The cover picture of this edition of *ABB Review* depicts a hot strip mill of the Shagang Group, located in Jiangsu, China. The mill uses both drives and control systems from ABB, contributing to its precision, reliability and efficiency. The installation can roll 3.5 million tons annually.

The inside cover picture shows wind turbines in Hohhot, China. In this remote part of Inner Mongolia, ABB equipment helps harness the power of the wind and transport it to the centers of consumption.

## Innovation highlights

- 6 Innovation highlights**  
ABB's top innovations for 2012
- 

## Innovating energy

- 11 Traction transformation**  
A power-electronic traction transformer (PETT)
  - 18 SafeLink CB switchgear**  
An innovative, integrated secondary distribution solution
  - 22 SF<sub>6</sub> and a world first**  
ABB launches the first-ever SF<sub>6</sub> recycling center
  - 27 Eliminating downtime**  
Keeping the power flowing during grid instabilities
  - 30 Power fitness**  
Reliable voltage protection of sensitive loads
- 

## Innovating production

- 34 The power of integration**  
Reaching new levels of productivity in the automation industry
  - 41 Controlling the living factory**  
Modeling a mammalian cell culture for an online process control system
  - 47 The fieldbus outside the field**  
Soft FF reduces commissioning effort simulating Foundation Fieldbus
- 

## Innovating usability

- 53 Winning by design**  
Innovative door communication system wins international design award
- 56 The frugal manufacturer**  
Regulatory issues set the agenda (part 3)
