ABB MEASUREMENT & ANALYTICS | DATA SHEET

100 GP
Analog pH/ORP sensor
Measurement made easy
The ¾ in analog pH/ORP sensor for use in general purpose applications

Increased efficiency
- ABB’s glass formulation provides fast process response without compromising durability and robustness
- Close-coupled temperature measurement ensures high accuracy even with rapid temperature changes

Dependable performance
- Enhanced double junction with ion trap delays poisoning effects ensuring the sensor operates longer in your process
- Large PTFE junction promotes fouling resistance and is easy to clean
- Durable Kynar® body provides high chemical- and abrasion-resistance

Modular design
- Common ¾ in sensor design paired with intelligent accessories provides mounting flexibility with safety and convenience in mind
Introduction
Making the right sensor selection for your application should be simple and easy. To help you make the right choice, we’ve divided our new family of pH/ORP sensors into three distinct ranges based on the applications they have been designed for; the 100, 500 and 700 ranges.

The 100 range are entry-level sensors designed for light duty use, while the 500 range offer a robust design for industrial applications. The 700 range are a specialty range for target applications.

Each electrode is clearly named and is also color-coded for ease of identification. This enables you to easily select the best sensor to meet your needs, ensuring optimal plant efficiency, performance and lifetime; every time.

The 100 GP analog pH/ORP sensor
Part of the next generation of ABB’s pH/ORP sensors, the analog 100 GP combines exceptional performance and durability in one efficient, maintenance-free design.

Highly accurate with fast response times, the versatile 100 GP provides complete confidence in a wide range of general process applications that include:

- drinking water
- municipal wastewater
- cooling water
- food & beverage

Performance you can trust
The 100 GP features ABB’s enhanced diffusion path double junction design with a polymerized gel electrolyte and chemical inhibitor, both slowing down the ion-diffusion rate and extending the length of the diffusion path. This design ensures that poisoning substances take longer to reach the encapsulated reference while the large, porous, chemically-resistant PTFE junction incorporating Viton™ seals protects against sensor fouling.

- Anti-poisoning
  - Ion trap
  - Reference wire protection inhibits poison attack

- Anti-fouling
  - Large porous PTFE reference junction resists coating, reduces likelihood of blocking and is easy to clean
Improved process efficiency

Varying sample temperature is one of the most common causes of pH measurement error due to its impact on sensor output. The 100 GP is equipped with a close-coupled temperature element capable of rapid response to quickly changing process conditions, ensuring a high level of accuracy and confidence in your measurement.

Robust glassware

Utilizing ABB’s experience in glass manufacturing dating back to the 1950s, the proprietary glass formulations used with the 100 GP offer fast response without sacrificing durability. Selectable in several configurations, the robust glassware is made suitable for wide range of general-purpose applications.

Low temperature (LT) glass
For measurement below 15 °C (59 °F), our low temperature blue glass provides ultrafast response in applications such as municipal- and industrial-wastewater treatment. Available in bullet-style.

High-performance (S) glass
Our high-performance yellow glass provides fast response and accurate measurement over the entire pH range. With an extremely low sodium error, the glass can maintain its accuracy even at very high pH levels. Available in flat- or bullet-style.

ORP platinum electrode
Chemically inert, our platinum electrode is design for conventional ORP/Redox measurement with an RTD element providing process temperature information.
Product adaptability

The 100 GP is available in flush- or notched-body design helping extend sensor operation and maintainability in challenging applications.

Flush-body design
The flush-body design, when paired with a flat-shaped glass electrode, helps promote self-cleaning when installed perpendicular to sample flow. In addition, the minimal protrusion prevents unwanted buildup, especially in fibrous applications.

Notched-body design
The notched-body design provides additional protection for bullet-style glass electrodes; especially from abrasive applications that can damage the glass electrode rendering it unresponsive.

Intelligent accessories
The 100 GP is offered with mounting accessories designed to improve adaptability into your process while providing safe and convenient operation. Available with flow-cell, quick-connect bayonet and dip pole assemblies, the 100 GP utilizes modular accessories that are compatible with all ABB’s next generation ¾ in threaded sensor bodies.

Optional auto-cleaning functionality is available as an added feature, ensuring extended operation with minimal intervention.

Extended storage
We understand most customers maintain stock of pH/ORP sensors in case of unexpected demand. Ensuring peak performance, even after extended storage, is critical in maintaining product availability and keeping your process running.

The 100 GP is stored in a specially-formulated solution with added anti-microbial agent keeping the sensor active for up to 2 years when stored as recommended.
**Dimensions**

Dimensions in mm (in)

**Flush sensor body**

Dimensions:
- 170.0 (6.7) mm
- 30.0 (1.2) mm
- ¾ in NPT
- ¾ in wrench flats

**Notched sensor body**

Dimensions:
- 170.0 (6.7) mm
- 37.0 (1.5) mm
- ¾ in NPT
- ¾ in wrench flats

**Electrical connections**

**Specification**

**Measurements**
- pH/ORP (platinum)
- Temperature

**Measurement range**
- **High performance (S) glass**
  - pH: 0 to 14
  - ORP: –2000 to 2000 mV
- **Low temperature (LT) glass**
  - pH: 0 to 10
- **Temperature**
  - High performance (S) glass (bullet): 0 to 60 °C (32 to 140 °F)
  - High performance (S) glass (flat): 5 to 60 °C (41 to 140 °F)
  - Low temperature (LT) glass: –5 to 50 °C (23 to 122 °F)
- **ORP platinum electrode**: 0 to 60 °C (32 to 140 °F)

**Temperature sensor**
- Pt100 (Class B, IEC 60751)

**Maximum pressure**
- 6 bar (90 psi)

**Recommended minimum sample conductivity**
- 50 μS/cm

**Recommended sensor storage**
- Between 15 and 35 °C (59 and 95 °F)

**Isothermal point at 25 °C (77 °F)**
- pH 7

**Reference system**
- Ag/AgCl with KCl gel electrolyte, double junction plus ion trap

**Process connections**
- ½ in NPT

**Wetted materials**
- **Electrode body**: PVDF (Kynar)
- **Reference junction system**: Porous PTFE and Viton O-rings
- **Measure system**: pH: Glass, ORP: Platinum

**Approvals, certification and safety**
- **CE Mark**
  - Covers EMC+LV directives (including latest version of EN61010)
- **Regulation 31**
  - Drinking water approval: Complies to DWI Regulation 31(4)(b)
  - Additional tests: BS6920 parts 2.2 and 2.4 on all wetted parts
- **EMC**
  - Meets requirements of IEC61326 for an industrial environment

### Sensor type
- pH – bullet glass for standard applications: high performance (S) glass
- pH – flat glass for in-line, fouling applications: high performance (S) glass
- pH – low temperature (LT) glass
- ORP (Redox) – platinum

### Body style
- ¾ in threaded insertion/immersion – no sensor guard (flush)
- ¾ in threaded insertion/immersion – notched sensor guard

### Connection type
- Tagged leads
- BNC on pH/ORP + temperature compensator connector
- VarioPin cable connector

### Integral cable length
- None
- 1 m (3.3 ft)
- 3 m (10 ft)
- 5 m (16 ft)
- 10 m (33 ft)

### Optional order code

### Operating instructions
