600T EN Series Pressure Transmitters
Model 611SS Flange mounted differential pressure transmitter

TÜV SIL 2 certified according to IEC 61508/ISA S84.01

Base accuracy: ±0.15%

Reliable inductive sensing system coupled with the very latest digital technologies
- ensures high performance at all process conditions

Hardware and software redundancy with MTBF of over 100 years

Wide selection of materials and choice of fill fluids including "process-inert"
- meet virtually all process requirements also protecting application integrity

Local snap calibration and full management via hand terminal or PC-running software

HART® communications
- allows integration with standard process bus

CoMeter display option
- offers HART Configuration capabilities combined with local indication

Ecoefficient life cycle
- ensures low environmental impact in compliance with LCA assessment to ISO 14040 standard

The all new 600T Series transmitter is now an even bigger choice
Temperature limits °C (°F):

- Ambient (is the operating temperature)
  - Lower ambient limit for LCD indicators: -20°C (-4°F)
  - Upper ambient limit for CoMeter: +70°C (+158°F)

- Process (1)
  - Lower limit - refer to lower ambient limits
    - Silicone oil and KTFILL-1 filling: 120°C (248°F) (2)
    - Inert fluid filling: 100°C (212°F) (3)
  - Upper limit
    - -20°C (-4°F) for Viton gaskets
    - 120°C (248°F) (2)
    - 100°C (212°F) (3)

(1) Process temperature above 85°C (185°F) requires derating the ambient limits by a 1.5:1 ratio.
(2) 100°C (212°F) for application below atmospheric pressure
(3) 65°C (150°F) for application below atmospheric pressure

- Storage
  - Lower limit: -50°C (-58°F); -40°C (-40°F) for LCD indicators
  - Upper limit: +120°C (+248°F); +85°C (+185°F) for LCD indicators

Overpressure limits (without damage to the transmitter)

- Lower: 0.067 kPa abs, 0.67 mbar abs, 0.01 psia
- Upper (is limited by the flange rating)
  - ANSI CL150: 2 MPa, 20 bar, 290 psi
  - ANSI CL300: 5 MPa, 50 bar, 725 psi
  - DIN ND16: 1.6 MPa, 16 bar, 230 psi
  - DIN ND40: 4 MPa, 40 bar, 580 psi

Static pressure
Transmitters for differential pressure operate within specifications between the following limits
- Lower
  - 1.3 kPa abs, 13 mbar abs, 0.2 psia
- Upper
  - same of overpressure limit (flange rating)
  - Double the lower limit with inert filling

Proof pressure
The transmitter meets SAMA PMC 27.1 requirements and can be exposed without leaking to line pressure of up two times the flange rating.
ELECTRICAL CHARACTERISTICS AND OPTIONS
- HART digital communication and 4 to 20 mA output

Power Supply
The transmitter operates from 10.5 to 42 Vdc with no load and is protected against reverse polarity connection (additional load allows operations over 42 Vdc).
For EEx ia and intrinsically safe approval power supply must not exceed 30 Vdc.

MINIMUM OPERATING VOLTAGES

</table>

Load limitations - 4-20 mA and HART total loop resistance:

\[ R(\Omega) = \frac{\text{Supply voltage} - \text{min. operating voltage (Vdc)}}{22} \]

Output signal
Two-wire 4 to 20 mA dc, user-selectable for linear or square root output, power of 3/2 or 5/2, 5th order or two 2nd order switching point selectable programmable polynomial output.
HART® communication provides digital process variable (%mA or engineering units) superimposed on 4 to 20 mA signal, with protocol based on Bell 202 FSK standard.

Output current limits (to NAMUR standard)
- Overload condition
  - Lower limit: 3.8 mA dc
  - Upper limit: 20.5 mA dc

Transmitter failure mode (to NAMUR standard)
The output signal can be user-selected to a value of 3.7 or 22 mA on gross transmitter failure condition, detected by self-diagnostics.
In case of CPU failure the output is driven <3.7 mA or >22 mA.

PERFORMANCE SPECIFICATIONS
Stated at ambient temperature of 23°C ± 3K (75°F ± 5), relative humidity of 50% ±20%, atmospheric pressure, mounting position with vertical diaphragm and zero-based range for transmitter with isolating diaphragms in AISI 316 L ss or Hastelloy and silicone oil fill or KTFILL-1 and HART digital trim values equal to 4-20 mA span end points, in linear mode.
Unless otherwise specified, errors are quoted as % of span.
Some performance data are affected by the actual turndown (TD) as ratio between Upper Range Limit (URL) and calibrated span.
IT IS RECOMMENDED TO SELECT THE TRANSMITTER SENSOR CODE PROVIDING THE TURNDOWN VALUE AS LOWEST AS POSSIBLE TO OPTIMIZE PERFORMANCE CHARACTERISTICS.

Accuracy rating
% of calibrated span, including combined effects of terminal based linearity, hysteresis and repeatability.
- ± 0.15% for TD from 1:1 to 15:1
- ± 0.20% for sensor code B for TD from 1:1 to 10:1
- ± 0.01% x URL for TD from 15:1 to 60:1
- ± 0.02% x Span for sensor code B for TD from 10:1 to 20:1

Optional indicators accuracy
- analog output meter: ± 2% full scale deflection
- LCD output meter: ± 0.1% of calibrated span ± 1 unit
- CoMeter
  - digital: ± 0.10% of max span (16 mA) ± 1 digit
  - analog ( bargraph): 10%

Optional surge protection
Up to 2.5 kV (5 kA discharge current) of 8 μs rise time/20 μs decay.
Operating influences

Ambient temperature per 20 K (36°F) change between the limits of -20°C to +65°C (-4 to +150°F):

<table>
<thead>
<tr>
<th>Model</th>
<th>Sensor code</th>
<th>for TD up to</th>
</tr>
</thead>
<tbody>
<tr>
<td>611SS</td>
<td>C to F</td>
<td>± (0.10% URL + 0.16% span)</td>
</tr>
<tr>
<td>Flange mounted differential</td>
<td>B</td>
<td>± (0.15% URL + 0.24% span)</td>
</tr>
</tbody>
</table>

Multiply by 1.5 the above coefficients for 20 K (36°F) change between the limits of -40 to -20°C (-40 to -4°F) and of +65 to +85°C (+150 to 185°F).

Optional LCD output meter ambient temperature

per 1 K (1.8°F) change between the limits of -20 and +80°C (-4 and +176°F)

Total effect : ± (0.0002 x span units + 0.1) of reading.

Optional CoMeter ambient temperature

Total reading error per 20K (36°F) change between the ambient limits of -20 and +70°C (-4 and +158°F):

± 0.15% of max span (16 mA).

Static pressure (zero errors can be calibrated out at line pressure)

per 2 MPa, 20 bar or 290 psi

- Model 611SS (differential flange mounted)
  - zero error : ± 0.20% of URL
  - span error : ± 0.20% of reading
  Multiply by 1.5 the errors for sensor code B.

Supply voltage

Within voltage/load specified limits the total effect is less than 0.005% of URL per volt.

Load

Within load/voltage specified limits the total effect is negligible.

Radio frequency interference

Total effect : less than 0.10% of span from 20 to 1000 MHz and for field strengths up to 30 V/m when tested with shielded conduit and grounding, with or without meter. Meets IEC 801.

Common mode interference

No effect from 100 V rms @ 50 Hz, or 50 Vdc.

Series mode interference

No effect from 1 V rms @ 50 Hz.

Mounting position

Rotations in plane of diaphragm have no effect. A tilt to 90° from vertical causes a zero shifts up to 0.5 kPa, 5 mbar or 2 inH2O, which can be corrected with the zero adjustment. No span effect.

Stability

± 0.30% of URL over a thirty-six-month period

PHYSICAL SPECIFICATIONS
(Refer to ordering information sheets for variant availability related to specific model or versions code)

Materials

Process isolating diaphragms (*)
AISI 316 L ss, Hastelloy C276 0; Monel 400 0; Tantalum.

High pressure side mounting flange
AISI 316 L ss with flushing connection

Low pressure side process flange, adapter, plug and drain/vent valve (*)
AISI 316 L ss; Hastelloy C 0; Monel 400 0; Plated carbon steel with AISI 316 L ss valves

Sensor fill fluid
Silicone oil (DC200) or inert fill (perfluorinated polyethers Galden 0) or "process-inert" fill (KTFILL-1).

Gaskets (*)
Viton 0, PTFE.

Sensor housing : AISI 316 L ss

Bolts and nuts
- Plated carbon steel bolts class 8.8 per UNI 5737 (ISO 4014) and nuts class 6.S per UNI 3740/4 (ISO 898/2).
- Plated alloy steel bolts per ASTM-A-193-77a grade B7M and nuts per ASTM A194/A 194 M-90 grade 2HM, in compliance with NACE MR0175 Class II.
- AISI 316 ss bolts Class A4-80 and nuts Class A4-70 per UNI 7323 (ISO 3506).
- AISI 316 ss bolts and nuts Class A4-50 per UNI 7323 (ISO 3506), in compliance with NACE MR0175 Class II.

Electronic housing and covers
Barrel version
- Low-copper content aluminium alloy with baked epoxy finish;
- AISI 316 L ss.
DIN version
- Low-copper content aluminium alloy with baked epoxy finish

Covers O-ring: Buna N.

Local zero and span adjustments:
Glass filled polycarbonate plastic (removable)

Tagging
AISI 316 ss data plate attached to the electronics housing.
Calibration
- Standard: at maximum span, zero based range, ambient temperature and pressure
- Optional: at specified range and ambient conditions; or at operating temperature.

Optional extras
Output indicator: plug-in rotatable type, LCD or analog.
Standard LCD output meter scale is 0 to 100% linear; special linear scale to specified range and engineering unit is available. Standard analog output meter scale is 0 to 100% linear or 0 to 10 square-root; special graduation is available.

Supplemental customer tag
AISI 316 ss tag fastened to the transmitter with stainless steel wire for customer's tag data up to a maximum of 56 characters and spaces on two lines for tag number and tag name, and up to a maximum of 28 characters and spaces for calibration details.

Surge protection
Material traceability

Environmental protection
Wet and dust-laden atmospheres
The transmitter is dust and sand tight and protected against immersion effects as defined by IEC 529 (1989) to IP 67 (IP 68 on request) or by NEMA to 4X or by JIS to C0920

Hazardous atmospheres
With or without output meter/integral display
INTRINSIC SAFETY/EUROPE:
ATEX/TÜV approval
EC-Type Examination Certificate no. EX5 00 12 42206 001
II 1 G T50°C, EEx ia IIC T5 (-40°C ≤ Ta ≤+40°C)
T95°C, EEx ia IIC T4 (-40°C ≤ Ta ≤+85°C)
FLAMPROOF/EUROPE:
ATEX/CESI approval;
EC-Type Examination Certificate no. CESI 00 ATEX 035
II 1/2 GD T80°C, EEx d IIC T6 (-40°C ≤ Ta ≤ +70°C)
T95°C, EEx d IIC T5 (-40°C ≤ Ta ≤ +85°C)
FACTORY MUTUAL (pending):
- Explosionproof: Class I, Div. 1, Groups A, B, C, D
- Dust ignitionproof: Class II, Div. 1, Groups E, F, G

Process connections
Low pressure side (according to DIN 19213)
- on flange: 1/4 NPT on process axis
- on adapter: 1/2 NPT on process axis
High pressure side (**):
2in or 3in ANSI 150 or 300 RF;
DN 50 or DN 80 DIN ND 16 or 40 Form C

Electrical connections
Two 1/2 NPT or M20x1.5 or PG 13.5 or 1/2 GK threaded conduit entries, direct on housing; straight or angle Harting HAN connector and one plug, on request.

Terminal block
- HART version
  Three terminals for signal/external meter wiring up to 2.5 mm² (14 AWG) and three connection points for test and communication purposes.

Grounding
Internal and external 6 mm² (10 AWG) ground termination points are provided.

Mounting position
Transmitter can be mounted in any position. Electronics housing may be rotated to any position. A positive stop prevents over travel.

Mass (without options)
7 to 11 kg approx (16 to 24 lb); add 1.5 kg (3.4 lb) for AISI housing. Add 1 kg (2.2 lb) for packing.

Packing
Carton 35 x 33 x 35 cm approx (14 x 13 x 14 in).

(*) Wetted parts of the transmitter.
(**) Bolts and nuts, gasket and mating flange supplied by customer
CONFIGURATION

- **Transmitter with HART communication and 4 to 20 mA**
- **Standard configuration**

Transmitters are factory calibrated to customer’s specified range. Calibrated range and tag number are stamped on the tag plate. If a calibration range and tag data are not specified, the transmitter will be supplied with the plate left blank and configured as follows:

- **Engineering Unit**: Specify code option
- **4 mA**: Zero
- **20 mA**: Upper Range Limit (URL)
- **Output**: Linear
- **Damping**: 1 sec.
- **Transmitter failure mode**: Upscale
- **Software tag characters**: Blank
- **Optional LCD output indicator**: 0 to 100.0% linear

Any or all the above configurable parameters, including Lower range-value and Upper range-value which must be the same unit of measure, can be easily changed using the HART hand-held communicator. The transmitter database is customized with specified flange type and material, O-ring and drain/vent materials and meter code option.

Custom configuration (option)
The following data may be specified in addition to the standard configuration parameters:

- **Descriptor**: 16 alphanumeric characters
- **Message**: 32 alphanumeric characters
- **Date**: Day, month, year
- **Damping**: Seconds

Available engineering units of pressure measure are:

- Pa, kPa, MPa
- inH2O@4°C, mmH2O@4°C, psi
- inH2O@20°C, ftH2O@20°C, mmH2O@20°C
- inHg, mmHg, Torr
- g/cm², kg/cm², atm
- mbar, bar

---

ELECTRICAL CONNECTIONS

- **HART Version**

HART hand-held communicator may be connected at any wiring termination point in the loop, providing the minimum resistance is 250 ohm. If this is less than 250 ohm, additional resistance should be added to allow communications.
NOTE: On low pressure side, process connection, gasket groove and gaskets are in accordance with DIN 19213. Bolting threads for fixing adapter or other devices (i.e. manifold etc.) on process flange is 7/16”-20 UNF.
