Circuit breaker retrofit is a cost-effective alternative to the complete switchgear replacement. Retrofitting is performed by replacing phased-out devices with circuit breakers from the current production range specifically designed to mechanically and electrically adapt to the existing models in the plant. The result is substantial improvement in reliability, safety, maintenance and performance.

ABB Service experts conduct on-site audits on existing installations to assess the condition of the equipment, recommend the most suitable solution and technically support the most appropriate investment.

ABB Service is a complete system provider of retrofitting solutions, from proposal to design, through manufacturing, testing and finally installation and commissioning.

SFA is the family name of a wide range of SF\textsubscript{6} gas circuit breakers manufactured by ABB and currently phased-out. They were either manufactured for fitting their own panel and cassette but also delivered to panel builders in both fixed and withdrawable version.

Additional variants have been produced during their life cycle due to the technological development, such as 36kV version. Specific versions can be identified looking the apparatus name on the label (e.g. SFAs, sG, sG-CD, 36, 36K, etc.). Maintenance activities on these apparatus must be only performed by certified operators according to EC Regulation 305/2008 applying specific SF\textsubscript{6} handling procedures as per IEC Regulation 842/2008 in those countries complying with.
Technical data
ABB offers a full range of retrofit solutions based on current ABB gas circuit breakers production, guaranteeing perfect one to one interchangeability with existing circuit breakers. ABB experts propose the best apparatus for each switchgear unit, depending on the characteristics of the apparatus installed in the network and the specific operating requirements of each unit.

The following basic technical data are required in order to provide standard retrofitting solutions:
• Rating plate data and serial number
• Four sides pictures
• Compartment inner pictures
• Existing functional electric circuit diagram
• Generator data for the relevant feeders

Options
• TruckMaster remote motorized racking
• MySiteCare monitoring and diagnostic
• MyRemoteCare cloud based services
• Power Care customer support agreement
