

Crane and Harbor Services Keeping your business moving

Crane and Harbor Services

For workloads that never sleep

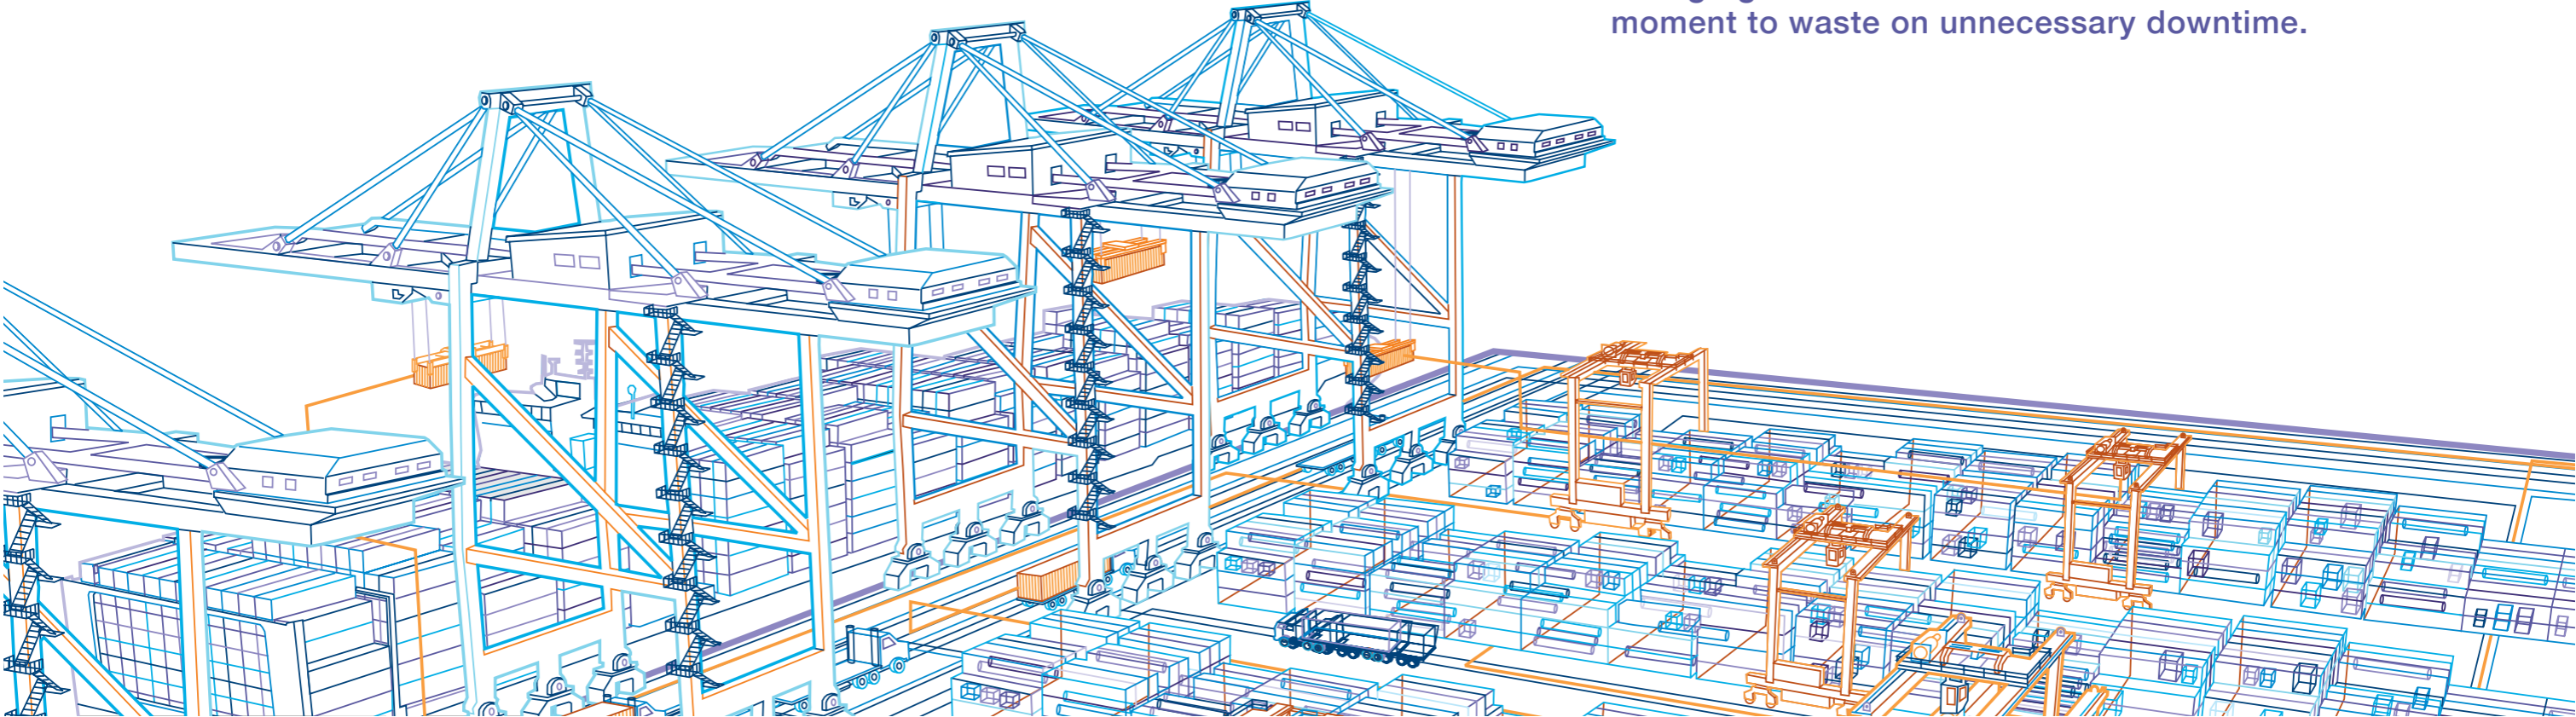

ABB Crane and Harbor Services is a global service organization with three regional competence centers strategically positioned for worldwide coverage. We are dedicated to provide every customer, across all crane types, a comprehensive range of services and solutions in order to maximize terminal performance and minimize crane downtime. Our experienced crane engineers are always ready for swift response, technical advice, troubleshooting and remote support connected to your system. Long-term lifecycle and crane modernization services are offered globally plus all our local representatives provide rapid spare part deliveries.

Precision, efficiency and productivity with every workload

Ships, containers and cargo within harbors are generally facing tight deadlines to be off and unloaded. Not a moment to waste on unnecessary downtime.

Core Services

Services from spare parts to asset management services, maintenance, retrofits, modernizations and training ensure a consistent level of optimal performance for maximum returns throughout the entire crane lifetime.

ABB's global logistics ensures your equipment is maintained to its original high standard with genuine ABB spare parts. A comprehensive stocking network offers smooth delivery of critical parts, assemblies and relevant documentation. Trained parts coordinators will serve you as a single point of contact for handling and prompt delivery. The ABB spare parts organization operates 24 hours a day, seven days a week. By using air freight and express courier services we can often ship parts to the site within 24 hours. We are also prepared for the unexpected with repair services available at short notice.

Asset Management Services

Our service offering covers the entire lifecycle of the equipment and is designed to optimize your equipment performance, lifetime and profitability. The services are created to meet your targets and to improve your process efficiency.

- Maintenance Programs
- Inventory Management
- Training
- Remote Diagnostic Services
- Technical Support
